Publish Your

API Service

in 6 Easy Steps with

Astera Data Services

STEP 1

Build APIs In Zero Code Environment

Develop APIs by visually defining API endpoints (request and response parameters). Create API flows using Astera's inbuilt functionalities and powerful ETL capabilities.

STEP 2

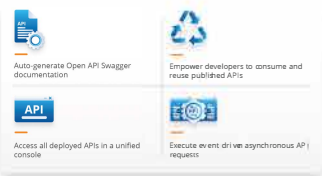

Test Your APIs

Reduce errors by testing your APIs before and after deployment by leveraging our built-in validation checks and powerful data sandboxing. Run automated, fully configured test flows after deployment to evaluate API performance.

STEP 3

Deploy APIs in Seconds

Publish API services and integrations in the cloud, on-premises, or hybrid environments with just one click.

STEP 4

Secure Your Data Services

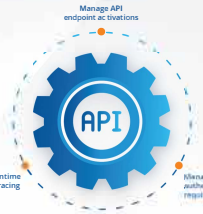

Controlled User Access & Role-based Management
Delegate data access tasks and functionalities to relevant users based on roles.

Token Based Authentication
Secure API services and integrations from unauthorized access by using bearer token authentication.

STEP 5

Manage APIs in a Unified View

Control and operate the critical elements of your API lifecycle from a centralized wizard. Modify configurations and manage API visibility through a point-and-click interface.

STEP 6

Monitor and Analyze API Performance

Translate API metrics into business benefits with a built-in live dashboard. Monitor API performance, response times, uptime, availability, and consumption trends in real-time.

Built on Astera's powerful ETL engine, **Astera Data Services** allows you to create and manage APIs and integrations in a unified, no-code environment...
all within days rather than weeks or months.
