Diploma of Health Science	Core	Year 1	Semester 2

EFTSL: 0.125

Delivery mode: Online

Co-requisites: Nil

Pre-requisites: Nil

Subject overview

This subject introduces students to reflective inquiry and research methodologies in complementary medicine and health sciences. It covers research terminology, designs, and data analysis, alongside traditional practitioner knowledge. Students will explore clinical research, ethical considerations, and research literature related to therapeutic modalities. Emphasising personal values and motivation in research, the course highlights the importance of selecting appropriate methodologies and understanding the evidence produced. This foundational subject prepares students for further studies by building a strong foundation in research processes and reflective inquiry.
