

ORKIN® FLY CONTROL

The Best in Pests™

Flies are a nuisance for your business — that's why Orkin's Fly Control Services include a plan designed to help protect your reputation and bottom line. Orkin's Integrated Pest Management (IPM) approach includes customized and comprehensive fly services:

Management

- ◆ May include installation of LED Insect Light Traps (ILTs) to draw flies to an internal board and provide 24-hour monitoring.
- ◆ Helps reduce entry points with exclusionary methods, such as air curtains and sealed cracks.
- ◆ Recommends additional exclusion and habitat modification methods to help keep flies away from your building.

Additional Treatments

- ◆ Orkin Actizyme® is a bioremediation treatment that targets and breaks down the residue certain flies need to survive, minimizing breeding and food sources.
- ◆ As a last resort, traditional chemical controls may be used, including baits, residual and non-residual treatment options.

Orkin's IPM Approach:

Inspection. Evaluation of your property for any potential breeding sites, entry points and possible fly attractions and identification of the kind of flies present.

Treatment. Recommended treatment is applied and recommended equipment is installed to help reduce and prevent flies.

Consultation. Provide you with a customized fly control plan and establish a complete sanitation program to help deter flies.

Monitoring. Ongoing inspections of your property to ensure your program is the most effective.

Ready to have absolute confidence in your pest control?
