

EXPOSE **BED BUGS**, NOT YOUR BUSINESS.

You take your job seriously, down to the smallest details. It shouldn't be so hard to find a pest control provider who can say the same. When it comes to bed bugs, learn how to protect your business with Orkin Bed Bug ProAct® to help reduce the threat of infestations with ongoing defense.

BED BUGS ARE HERE TO STAY, AND YOUR CUSTOMERS KNOW IT

As travel resurges in the world, bed bugs have more opportunities to hitchhike for a getaway. These pests continue to be a threat to your business, and with staffing shortages in the hospitality industry, it might be the case that bed bug introductions are not being monitored as often as desired.

EARLY DETECTION SAVES YOU MONEY

You can take your chances and hope for the best, but because bed bugs can hitchhike at any time, they're nearly impossible to prevent. Orkin®'s proactive inspection and treatment service can help find bed bugs, meaning we can:

- ◆ **Lessen the impact of an introduction** – Proactive treatments and regular monitoring help keep bed bug introductions at bay and minimize the chance they'll grow into an infestation.
- ◆ **Quickly turn “out of service” rooms** – Finding bed bugs early means reducing the time that rooms are held out of service for treatment, and minimizing the potential impact on your bottom line.
- ◆ **Minimize the loss of soft goods** – Bed bug programs are costly if you have to discard soft goods and mattresses. Our plan helps reduce the likelihood that you'll have to throw away your furniture and mattress investments.
- ◆ **Avoid negative word-of-mouth** – In an era of instant online reviews, an upset customer can do a lot of damage to your hard-earned reputation, as well as bring on costly litigation.

In addition to helping inhibit bed bugs, our proactive treatments also help address basic pest pressures, making the need for additional pest control service in your guest rooms unnecessary.

ORKIN BED BUG PROACT[®]

Initial Visual Inspections

Your Orkin Pro™ is trained on exactly what to look for and how to find bed bugs. An Orkin Pro will complete a comprehensive inspection of all guest rooms and common areas, looking for the first signs of bed bugs. We'll focus on bed bug hot spots.

Proactive Defense

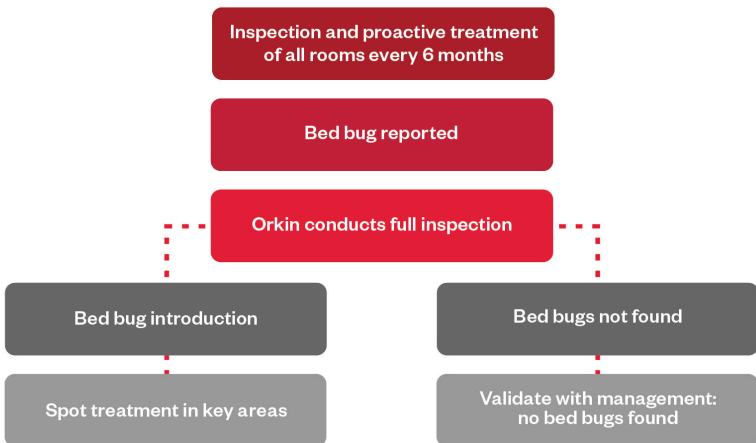

Every six months, we'll utilize a proactive treatment to create a bed bug barrier in all guest rooms and key common areas. Targeted treatment of cracks and crevices, where bed bugs tend to hide, can help stop an introduction from growing into an infestation. Our proactive service not only helps protect against bed bugs, but general pests as well, providing a program to serve all your pest control needs.

Documentation and Monitoring

Year-round monitoring, documentation and communication help to ensure the ongoing effectiveness of your service. After each inspection and treatment, your Orkin Pro will document the details of services performed and any pests found, so you will have a full record of your bed bug history.

Staff Training

An effective bed bug program involves everyone at your hotel and starts with education. Orkin will provide an initial staff training so your management team, hotel associates and housekeeping employees are all on the same page.
