

# ORKIN® BIRD CONTROL

The Best in Pests™

## Don't Be A Landing Place For Birds

Birds are important members of the ecosystem, but some can be bad for your business. It's a challenge to deter them from coming home to roost, but you can count on Orkin® to customize a bird control program focused on habitat modification, helping to make your property unattractive to problematic birds.

### Protect Your Business, Don't Let Birds:

#### Cause Health Hazards.

Birds are known to spread more than 60 transmittable diseases, including Salmonella, histoplasmosis, meningitis and encephalitis. They also carry fleas, ticks, lice and mites.

#### Cause Structural Damage.

Corrosive bird droppings can erode building finishes, causing costly and ongoing maintenance and repairs.

#### Make You Liable.

Bird droppings can cause slippery walking and working conditions, leading to potential accidents and lost productivity.

#### Deter Customers.

When congregating, birds are noisy and can be offensive to customers. Customers can have a negative brand experience if they are pestered by birds while on your property.

## Every Business is Different

Each species of pest birds requires a different treatment. Whether combating pigeons, sparrows or starlings, your Orkin Pro assesses the situation quickly and customizes a program to fit your needs.

**Inspection.** Your Orkin Pro conducts a detailed site survey to evaluate your bird problem, including feeding and watering locations, roosting, nesting and loafing areas, as well as any potential risk to non-targeted species.

**Clean Out.** Sanitization and removal of biologically hazardous fecal matter are important for many reasons. It helps reduce potential health hazards, prevents building and paint erosion and creates a safer working environment by eliminating slippery surfaces. Bird Clean Out also helps prevent birds from re-infesting the area.

**Habitat Modification.** Habitat modification discourages nesting and roosting. Exclusion and repellents are fundamental to an effective habitat modification program, including netting, filling holes, gels, bird coils and bird wire.

**Mechanical Traps & Sprays.** Exterior traps are a temporary yet effective solution to your pest bird problem. When necessary, environmentally responsible sprays or bird birth control may be employed.

Orkin practices responsible bird control.

The Orkin Bird Control program uses methods that help minimize impact on bird populations and the environment, and is compliant with all federal, state and local wildlife regulations.
