

ORKIN FLY CONTROL PROGRAM

GET FLIES UNDER CONTROL AND WORRY LESS

WHY DO YOU NEED ORKIN'S FLY CONTROL PROGRAM?

Flies cause risk to your business by affecting your reputation and bottom line. Orkin's Fly Control Program effectively helps you deal with fly infestations at all levels. We'll start with an inspection of your establishment and develop a program that follows our time-proven protocols and helps you to stay focused on your actual job.

DON'T ALLOW FLIES TO:

Quickly breed. A female fly can lay hundreds of eggs within a few weeks. Eggs from certain fly species could hatch in as little as 12 to 24 hours. The resulting maggots begin feeding immediately.

Contaminate your food. Adult flies move from rotting, disease-laden garbage to exposed food and surfaces.

Spread disease. Flies can spread pathogens, including Staph., E. coli and Salmonella.

Undermine your reputation. Not only can flies leave behind droppings, regurgitated food and pathogens when they land, but can also cause customers to form an unsanitary image of your business.

Cost you money. Flies can be responsible for loss of customers.

PROTECT YOUR BUSINESS

Your business and property are unique, and there is no single fly control treatment that will work in all cases. Worry less about fly issues and let your Orkin Commercial Pest Specialist customize a program for you. Here are some essential elements to building and maintaining an effective program:

Inspection. On the first visit, your Orkin Commercial Pest Specialist will carefully inspect your facility for potential breeding sites, entry points and possible areas that would attract flying insects.

Identification. We've seen all varieties of fly infestations: House, Phorid/Humpbacked, Drain, Fruit, Blow Fly and more. We will identify the kind of flies you have before developing a customized plan.

Sanitation. Flies thrive in warm, moist conditions. We will help you establish a complete sanitation program to help keep flies to a minimum.

Exclusion. To help prevent flies from entering, your Orkin Commercial Pest Specialist will recommend sealing and caulking any cracks or crevices. Dual doors, vestibules and air curtains may also be considered.

Mechanical Control. State-of-the-art LED Insect Light Traps (ILTs) may be installed to provide 24-hour monitoring. We use industry leading LED ILTs that outperform fluorescent and leading LED units in multiple ways:

- **Upgraded Performance.** Unique technology allows up to 39% faster fly catch compared to fluorescent units and up to 70% faster fly catch compared to the next leading LED units.
- **Lower Maintenance.** LED strips can last up to 3 years, removing the need for annual bulb replacement.
- **Sustainable.** Socially responsible and environmentally friendly by reducing carbon emissions and are mercury-free.
- **Energy Efficient.** Helps reduce energy costs for your business by 56-82% per year vs. fluorescent units.

Chemical Control. As a last resort, optional chemical controls may be used – such as baits, liquid residuals, wettable powders and fogging.

Ongoing Monitoring and Maintenance. Your Orkin Commercial Pest Specialist will continue to monitor and adjust your program as necessary. This includes ongoing inspections of your entire property, replacement of glue boards and LED ILT strips (when necessary), and monitoring of all other controls.

Never worry about fly control again.
