ORKIN[®] SMALL FLY FOAM SERVICE

SOME OF THE SMALLEST FLIES CAN CAUSE THE BIGGEST ISSUES FOR YOUR BUSINESS

Fruit, phorid, moth and other “small flies” are all attracted to build up from garbage, decaying organic matter and grease. Removing the conditions that attract these flies to your business is crucial to reducing the chances of an infestation.

In addition to your existing Fly Control measures, utilizing bioremediation products can help eliminate existing small flies and prevent them from returning by reducing the food sources they need to survive while helping to keep your facility clean.

Orkin Actizyme[®]

- ◆ Provides an environmentally conscious and effective solution for small flies.
- ◆ Breaks down organic material found in drains and on surfaces through the use of microbes and enzymes.
- ◆ Can be combined by your Orkin Pro[™] with a foaming agent to help dissolve greasy buildup and reduce fly populations in areas such as walls, floors, underneath equipment, on floor mats and in drains.

Ready to have absolute confidence in your pest control?

Contact Orkin to partner with the gold standard in pest control.
