

ORKIN[®] FLY CONTROL

COMMERCIAL SERVICES

Flies are a nuisance for your business – that's why Orkin[®] offers customized and comprehensive Fly Control services to help protect your reputation and bottom line. Your Orkin Pro[™] will begin with an Integrated Pest Management (IPM) approach and then recommend tailored solutions for your property.

Orkin's IPM Approach:

Inspection. Evaluation of your property (inside and outside) for any potential breeding sites, entry points, possible fly attractants and identification of the kind of flies present.

Treatment. Recommended treatment is applied and recommended equipment is installed to monitor fly activity and help reduce and prevent flies.

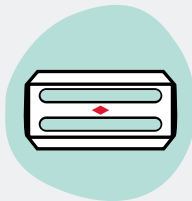

Consultation. Our recommended, customized fly control plan based on our inspection and creation or enhancement of your sanitation program to help deter flies is discussed.

Monitoring. Ongoing inspections of your property to ensure your program is the most effective.

Service Options We May Recommend:

LED Insect Light Traps (ILTs)

LED ILTs draw flies to an internal board and provide 24-hour monitoring.

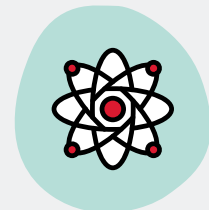

Orkin Actizyme[®]

A bioremediation treatment that targets and breaks down the residue certain flies need to survive, helping minimize breeding and food sources.

Insect Growth Regulators (IGRs)

A hormone-based product that helps break the fly's life cycle, preventing the young from maturing and, in some cases, preventing reproduction.

Chemical Treatments

As a last resort, traditional chemical controls may be used, including baits, residual and non-residual treatment options.

Ready to have absolute confidence in your pest control?

Contact Orkin to partner with the gold standard in pest control.
