

ORKIN ACTIZYME®

FLOOR AND DRAIN CLEANER

Grease and grime buildup are bad for business. They attract pests, create odor-causing bacteria and can cause slippery, unsanitary workplace environments.

That's why we offer Orkin Actizyme® Floor and Drain Cleaner — an environmentally responsible solution that uses naturally occurring enzymes and beneficial bacteria to break down decaying organic matter and tough grease.

Orkin Actizyme:

- ✓ Helps dissolve grease and grime buildup in hard-to-reach areas like under equipment, in cracks and crevices, or in drains.
- ✓ Helps control odor-causing bacteria, not just mask it, around trashcans and garbage disposals.
- ✓ Helps prevent slippery surfaces from grease buildup in drains and on floors that lead to falls, leaving you with a more sanitary workplace.

Orkin Actizyme can be incorporated into your sanitation program in three ways:

1

Dilute. Mix the Orkin Actizyme concentrate with water to create a multi-purpose cleaner for your floors, drains and the underside of equipment.

2

Full Force. Use Orkin Actizyme at full-strength directly on grimy floors, the underside of equipment and in drains to help break down even the toughest residues.

3

Automate. Your Orkin Pro™ can install a wall dispenser that automatically dilutes the Orkin Actizyme concentrate and dispenses it directly into drains, pipes and any other spots that need regular de-greasing.
