

ORKIN BIRD CONTROL

Pest birds cause tens of millions of dollars of damage every year to building facades, roofs and ventilation systems. They can also cause permanent injury to your brand. Orkin's Bird Control Program is an effective, responsible way to help keep birds from interfering with your business.

Why You Need Orkin Bird Control

Reduced Health Hazards

Birds are known to spread more than 60 transmittable diseases, including Salmonella, histoplasmosis, meningitis and encephalitis. They also carry fleas, ticks, lice and mites.

Prevent Structural Damage

Corrosive bird droppings can erode building finishes, causing costly and ongoing maintenance and repairs.

Reduced Liability

Bird droppings can cause slippery walking and working conditions, leading to potential accidents and lost productivity.

Reinforced Brand Satisfaction

When congregating in large numbers, birds are noisy and can be offensive to customers. Customers can have a negative brand experience if they are pestered by birds while on your property.

PEST CONTROL DOWN TO A SCIENCE.™

ORKIN BIRD CONTROL

Customized Solutions

Each species of pest birds requires a different treatment. Whether combating pigeons, sparrows or starlings, your Orkin Commercial Pest Specialist assesses the situation quickly and customizes a program to fit your needs.

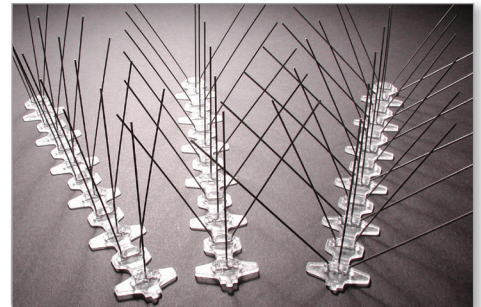

INSPECTION

Your Orkin Commercial Pest Specialist conducts a detailed site survey to evaluate your bird problem, including feeding and watering locations, roosting, nesting and loafing areas, as well as any potential risk to non-targeted species.

CLEAN OUT

Sanitization and removal of biologically hazardous fecal matter is important for many reasons. It helps reduce potential health hazards, prevents building and paint erosion and creates a safer working environment by eliminating slippery surfaces. Bird Clean Out also helps prevent birds from re-infesting the area.

HABITAT MODIFICATION

Habitat modification discourages nesting and roosting. Exclusion and repellents are fundamental to an effective habitat modification program, including netting, filling holes, gels, bird coils and bird wire.

MECHANICAL TRAPS & SPRAYS

Exterior traps are a temporary yet effective solution to your pest bird problem. When necessary, environmentally responsible sprays or bird birth control may be employed.

Orkin practices responsible bird management. The Orkin Bird Control Program uses methods that ensure minimum impact on bird populations and the environment, and is compliant with all federal, state and local wildlife regulations.
