# USER'S GUIDE

**(We reserve the rights to make any technical modifications necessary.)**

For your own protection, please read the following guide and follow the given instructions.
This helmet is designed to protect impact cause by collision of head with an obstacle while doing the following winter sports activities: ski, snowboard and skiboard, thus excluding all other activities, whether motorized or otherwise.
This helmet is compliant with CE EN1077 as well as ASTM F2040 to meet the European regulation 2016/425 relating to personal protective equipment, and American requirements for "Helmets used for Recreational Snow Sports". EU declaration of conformity available on www.salomon.com in your product description.

## Warning:

Winter sport activitie involve difficult and inherently hazardous conditions. You shall understand and accept the inherent risk of injury or death involved by these sports activities.
You must close the buckle before beginning any activity and for the duration of this activity.
You must take off the helmet when you have finished your activity to eliminate a risk of hanging. Under no circumstances should the helmet be worn without the ear straps. You must remove all hard accessories such as barrettes, hair clips, etc.
You must verify the strap adjustments before each use. For children's helmets, an adult must always verify that the helmet has been adjusted correctly.
All protection equipment has limits; wearing a helmet can limit the severity of head trauma in the case of an accident. A helmet does not however protect uncovered zones such as the face or neck. Certain types of impact, even an accident at low speeds can cause severe injury, even death.
Always ski with caution respecting the security rules of your sport which can evolve; keep informed of these changes by asking the personnel of your resort or ski instructors.

## Instructions for use - CAUTION !

**- Storage of your helmet:** keep your helmet away from all sources of heat. Never expose your helmet to over 40°C. Extended exposure to fierce sunlight may weaken various plastic materials ⚠. These conditions often occur within a car parked in the sun.

**- Advice to choose your helmet:** To ensure optimal protection, your helmet must be chosen in the correct size (avoid empty spaces and tight areas). Do not hesitate to consult a salesperson.

**- Adjustment of your helmet:**

1) Position your helmet on your head, not too far forward nor too far back. Fig.1
2) For models with a fit adjustment system, adjust it to the circumference of your head. Fig.2
3) Close the buckle under your chin until you hear a click sound. Fig.3
4) Adjust the length of the chin strap to maintain the position of the helmet. The helmet should fit well, yet not be too tight affecting our respiration or swallowing. Try to move your head around to see if the helmet moves. It should stay in place and be comfortable.

## Cleaning:

1) External shell: use only soap and water. Do not use gasoline or any solvent/ chemical substances.
2) Lining & ear pads :

**- Upkeep:** Do not modify or remove any of the original component parts of your helmet other than as recommended by Salomon. Do not put varnish or any coloring products on your helmet. Do not cut the ends of the straps. Only use the included stickers on your helmet.

**- Servicing:** Inspect your helmet regularly. If you notice any sign of deformation or damage, replace your helmet. Do not hesitate to show your helmet to a Salomon dealer or contact our customer service department.

**- Replacement - WARNING !**
This helmet was designed to absorb shocks by deformation or destruction. If your helmet has been subjected to a forceful shock, or involved in an accident, it should be destroyed and replaced even if there is no visible damage because interior damage can occur that weakens the helmet.
SALOMON recommends not use a helmet more than 5 years from the date of manufacture (month/year appears on the sticker inside the helmet).

## Usable Accessories - CAUTION !

Salomon helmets are designed for use only with Salomon accessories other than sunglasses. Mounting any other accessory is at the risk of the user.

**- Helmets with an audio system:** The use of earphones during winter sports could prevent the skier from hearing approaching skiers. This could cause accidents and injuries even death. Please be aware: the skier in front always has priority on the slopes thus it is your responsibility to avoid a collision. The headphones could prevent you from hearing the sounds of skis/edges on the snow and distract you keeping you from skiing safely.

If the helmet is eqquipped with chinbar the adjustment can refer to Fig.4

## CE levels of protection

The EN1077 norm provides 2 protection categories:
Class A and class B helmets are for alpine skiers, snowboarders and similar groups. Class A helmets offer comparatively more protection. Class B helmets may offer greater ventilation and better hearing, but protect a smaller area of the head and give a lesser degree of protection from penetration.

## Warranty

For information concerning warranty on Salomon products, please refer to the Warranty section on www.salomon.com
