

Fort Knox Child Development Center

Fort Knox, Kentucky

Client:
U.S. Army Corps of Engineers,
Louisville District

Total Cost:
\$6,300,000

Meets requirements for LEED® Silver
Certification

Nature of Work:

As part of a Design-Build team with J2 Engineering, Borrelli + Partners was selected by the U.S. Army Corps of Engineers Louisville District to design a 22,927 square foot Child Development Center at Fort Knox in Fort Knox, KY. The LEED® Silver targeted facility now accommodates up to 225 children ages six to ten. The project was funded through the American Recovery and Reinvestment Act.

Borrelli + Partners' scope of work included providing complete architectural and engineering services from schematic design through construction administration. This Child Development Center is a one-story building with three large atrium spaces, performing arts studio, arts and science classrooms, a computer lab and homework center. It also contains a commercial kitchen, demonstration kitchen and gymnasium. All administration facilities and MEP support areas are housed within the building as well. A large exterior playground was also designed on site.
