

Take the Water Challenge

Take Action. See Change.

Students Rebuild, charity: water and Global Nomads Group have joined forces to bring clean, safe water to thousands of people in Tanzania. When you take the Students Rebuild Water Challenge and make paper beads, every 20 handmade beads will provide access to clean water for one person in a village.

Take a Stand

- Nearly 800 million people in the world live without clean water.
- Unsafe water and lack of basic sanitation kill more people each year than all forms of violence combined, including war.
- In northern Tanzania, water and sanitation systems in schools are highly overburdened or non-existent. In these conditions, students increasingly miss class and often abandon their education altogether.

Make a Bead

Make a paper bead and mail it in to generate funding for water projects in Tanzania.

- Every 20 handmade beads will provide access to clean water for one person in a village.
- The Bezos Family Foundation through Students Rebuild will match your beads with funding for 41 water projects that serve 16,000 people in schools and communities.

Share Your Voice

Students Rebuild offers unique opportunities to connect directly with humanitarian staff, other Water Challenge participants and young people in Tanzania through blogs, interactive programming, live webcasts, photo sharing, video and more!

Take the Water Challenge

Take Action. See Change.

Together, Rebuild!

Use your creativity to make a tangible difference for thousands of people in Tanzania!

- These projects will mean more than clean water. It means opportunity, freedom to go to school and get an education. Clean water means less disease and more money for books and other needs.
- Water affects everything: education, health, poverty, prospects for women and children. It affects you—even if you're not yet feeling the effects of the water crisis in your own backyard.

Why Beads?

Why beads? Beads are a part of life in Africa—they're often used for ceremonies, given and exchanged at significant life events such as birth, puberty, marriage and death. For thousands of years, African beads have been used as adornment, communication and currency. To honor the people of Tanzania, we invite you to join a global bead-making effort that brings schools and communities clean, safe water.
