

TREATING PATIENTS WITH TERMINAL DENTITION IN THE MAXILLA

Zygomatic Implants Options in Immediate Treatments

The evaluation of patients for immediate loading who have with terminal dentition, especially in the maxilla, may at times be challenging. This presentation will introduce and showcase simple pre-operative techniques to predictably evaluate the type of final prosthesis needed for this group of patients. Patients generally are presented with treatment plans to undergo removal of their teeth followed by several months of wearing a nonfunctional full denture as the alveolar ridge heals. This is an uncomfortable phase of their treatment and therefore, many patients who may be presented with this treatment option chose not to have any form of treatment performed.

In this presentation, several cases will be shown to demonstrate the efficacy of immediate loading the terminal dentition patient eliminating the denture wearing phase. This presentation will outline an efficient and predictable treatment protocol allowing for a higher case acceptance by the patient with terminal dentition.

 Date	 Speaker	 Location	 Time	 Price	 CE Hours
September 17, 2021	Dr. Edmond Bedrossian	Andover, MA	8:00am-3:00pm EST	\$299	5 hours
October 22, 2021	Dr. Edmond Bedrossian	Andover, MA	8:00am-3:00pm EST	\$299	5 hours

This presentation will:

- Introduce the Zones of the maxilla
- Present the factors to consider when placing axial, tilted, reversed tilted and the zygoma implant in reconstruction of the edentulous maxillae
- Review preoperative determination of the reasons and the technique for alveoloplasty prior to implant placement
- Discuss the algorithm to achieve adequate insertion torque
- Review the SRA abutment and its role in the immediate conversion of the patient's denture to a fixed provisional
- Provide a hands-on opportunity. Participants will become familiar with the armamentarium as well as place zygomatic implants on the provided maxilla models under Dr Bedrossian's directions.

Learning objectives:

- Understanding the Pre-treatment evaluation protocol for the patient with terminal dentition.
- Understanding the preoperative discussions with the laboratory for the fabrication of the immediate denture needed for the conversion to a fixed provisional prosthesis.
- Understanding the sequence of the surgical treatment for immediate implant placement including tilted and the Zygoma implant.

Audience:

This course is designed for Clinicians **NEW** to zygomatic procedures
