Web Application Assessment Essentials

OffSec's Web Application Assessment Essentials learning path is designed to help learners grasp the basics needed to start learning web application security.

Web Application Assessment Essentials covers tech-adjacent concepts that are pillars for any cybersecurity focus area and are valuable for upskilling technical professionals to security roles.

The training also covers web app security-specific Learning Modules such as Secure Coding, Web Attacker Methodology, and Input Validation. Hands-on Learning Module Exercises allow learners to practice and solidify their skills.

Students who complete Web Application Assessment Essentials will gain the necessary knowledge to enroll in the Web Attacks with Kali Linux (WEB-200) course.

OffSec's Web Application Assessment Essentials learning path is only available through a Learn subscription.

BENEFITS:

- Upskill technical professionals to security roles
- Keep track of learners' progress with interactive exercises
- Challenge IT, staff, and developers, to perform with security in mind
- Follow learner journeys via reporting, assessments*, and badges*
- Elevate your team's skill set and reduce risk by preparing them for advanced training and certifications

  * launching soon!
