

SensR

Advanced refrigeration monitoring is here.

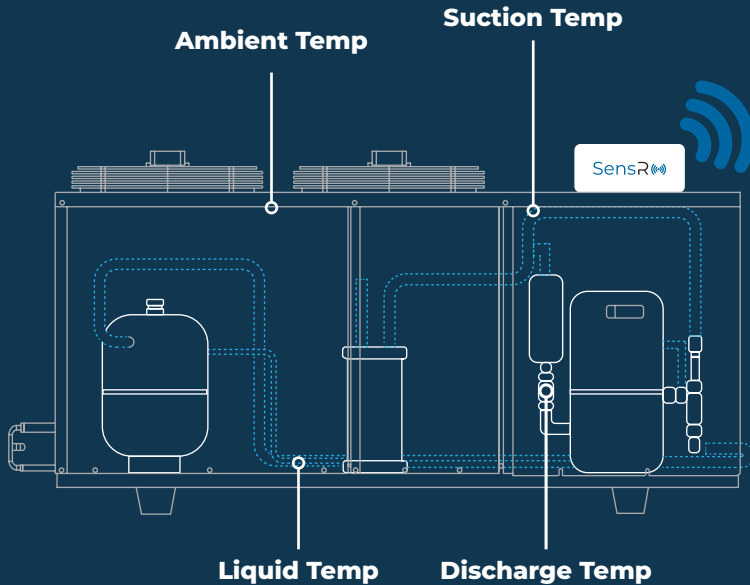

Reduce the possibility of emergency servicing & lost produce costs for your customers. Be alerted to performance changes in condensing units before they become major problems.

The background is a solid blue color with several large, overlapping, curved shapes in a slightly darker shade of blue. These shapes are organic and fluid, resembling stylized waves or abstract brushstrokes. They are positioned primarily on the left and right sides of the frame, leaving a clear central area for text.

SensR is a new pre-emptive, cloud-based alert & monitoring system for refrigeration condensing units.

By highlighting key issues before they become catastrophic, SensR allows you to pre-emptively address issues that may otherwise result in emergency call outs or stock loss.

How SensR Works

Temperature sensors monitor the unit's ambient, discharge, suction and liquid temperatures for unusual activity. This allows SensR to report on issues such as potential compressor failure, ice-up, refrigerant loss and dirty condensers.

Developed in partnership with Tecumseh, Carel and Actrol, SensR has undergone thousands of hours of testing across dozens of locations Australia wide. SensR includes: Carel Cloud Gateway and Smart Control unit, wi-fi antenna, 4 sensors and all associated wiring, encompassed in a weather-proof box which is pre-fit to a range of Tecumseh condensing units.*

Predictive Technology

All from your smartphone

With the SensR mobile app, you can monitor all your connected condensing unit sites. The app sends push notifications whenever activity outside-of-normal occurs. You'll receive notifications highlighting each issue, the location and its priority.

A new level of service

Because SensR highlights the priority of each issue, you can easily schedule maintenance into your work calendar. By addressing potential problems early, you can perform the work without any inconvenience to customers or your team.

Enhance your reputation

With SensR, you can position your refrigeration business as an industry leader, creating an additional level of trust and reliability with every install. Plus, it makes managing your service calls that much easier.

Troubleshoot with key data

The app displays historical performance graphs, so you can compare current performance to the previous weeks. SensR also has a web-portal available for more in-depth analysis.

Savings for your customers

SensR is an added value service for your customers. By troubleshooting issues early, you're potentially saving customers thousands in lost produce and emergency servicing costs.

Inbuilt Features

Temperature Sensor Alerts

Predictive alerts (proactive rather than reactive)	✓
Push notifications through app	✓
Alert history	✓
Alert statistics – Common fault findings	✓
Alert priority setting configuration	✓
Customisable alert parameter settings	✓

Warranty

Extended warranty on condensing unit	Additional 24 months (3 years total)
SensR connection box warranty	24 months

Data Analysis

Real-time unit analysis data

Estate level overview

Historical data available through app

Downloadable reports - data export

Site Registration
