Technical Bulletin No. 0017

LP® SmartSide® Face-Nailed Lap Siding

LP® SmartSide® Lap Siding is to be attached to structures with fasteners located 3/4 inch (19 mm) from the top edge of the siding and under the over-lapping course of lap siding so that the fasteners are “blind-nailed” or hidden under the overlap course.

If the lap siding is face-nailed or the nail heads are exposed, the exposed nail heads must be sealed to prevent liquid moisture intrusion and water buildup and must be regularly inspected to maintain the proper sealant protection over the nail heads.

If you have any questions, please call LP Customer Support at 1-888-820-0325.
