

LP® FLAMEBLOCK® ZB

FIRE-RATED SHEATHING WITH ZINC BORATE

SLOW DOWN THE SPREAD OF FLAMES. ELEVATE FIRE RESISTANCE.

LP® FlameBlock® ZB Fire-Rated Sheathing with Zinc Borate offers a combination of flame-spread resistance, burn-through protection, and resistance to termite damage and fungal decay—all in one panel. Borates are naturally occurring minerals that are odorless and colorless in wood. Designed for use in wall and roof deck applications, each panel features LP's proprietary Pyrotite® coating on one or both sides.

ADVANTAGES

- Helps protect against termites and fungal decay
- Made with LP's proprietary noncombustible, fiberglass-reinforced Pyrotite® coating
- Combines flame-spread and burn-through resistance in applications that can help meet building code requirements for fire-resistant construction
- Evaluated to meet code requirements as a component of 1-hour and 2-hour fire-resistant-rated wall assemblies and in roof deck applications
- Backed by a 20-Year Limited Warranty

DESIGN STRENGTH AND FLEXIBILITY

LP® FlameBlock® ZB panels carry load/span and shear design values equivalent to an untreated wood structural panel of the same Performance Category evaluated in accordance with US DOC PS 1 and PS 2. Using LP FlameBlock ZB sheathing provides design flexibility by combining structural capacity and fire resistance in a single panel. It may eliminate a layer of gypsum to simplify and expedite the construction process.
