

# ENVIRONMENTAL PERFORMANCE ADDENDUM

## 2024 NON-GHG AIR EMISSIONS

This document supplements LP's 2025 Sustainability Report to include 2024 non-GHG air emissions data on nitrogen oxides (NOx), sulfur oxides (SOx), and volatile organic compounds (VOCs). To maintain alignment with state, federal, and provincial air emissions reporting timelines, 2024 metrics were not available for inclusion in the report.

For additional details on our air emissions management approach and related performance, please refer to our [2025 Sustainability Report](#) (Air Emissions on page 44).

Air Emissions (Metric Tons) <sup>1</sup>	2024	2023
NOx	1,304	1,164
SOx	66	70
VOCs	1,390 <sup>2</sup>	1,086

<sup>1</sup>Does not include data from our St. Louis location (NOx and SOx), Watkins location (NOx, SOx, and VOCs), or South America locations (NOx, SOx, and VOCs).

<sup>2</sup>In 2024, VOC emissions at one of our manufacturing facilities increased due to the facility changing its fuel source to recycled sander dust briquettes, a low-carbon alternative.
