

# LP WEATHERLOGIC® ZB

## AIR & WATER BARRIER WITH ZINC BORATE

### MOISTURE MANAGEMENT TECHNOLOGY TO ELEVATE YOUR BUILD

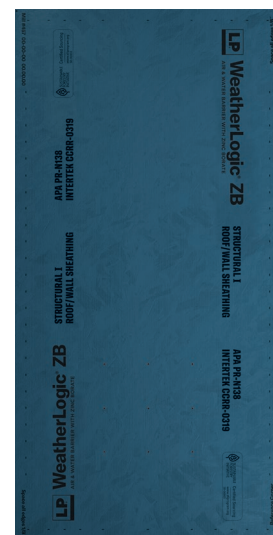

LP WeatherLogic® ZB Air & Water Barrier with Zinc Borate is an APA Structural I Rated Sheathing panel used for wall and roof sheathing that combines air and water protection with resistance to termite damage and fungal decay. Borates are naturally occurring minerals that are odorless and colorless in wood. The vapor-permeable membrane on the panel also allows moisture to dry.

### ADVANTAGES

- Helps protect against termites and fungal decay
- Structural I Sheathing grade provides higher cross-panel strength, stiffness and racking strength than standard sheathing
- Helps safeguard the home from water intrusion for a tighter building envelope while allowing moisture vapor to escape
- Installs like regular sheathing, but eliminates the need for housewrap, in most cases, for potential labor savings while keeping jobsites clean and professional
- Backed by an industry-leading 30-Year Limited Warranty

### INSTALLATION

LP WeatherLogic® ZB panels install fast and hassle-free. The panels are nailed to exterior studs, replacing standard wall and roof panels and, in most cases, conventional wrapping methods. After installation, seams between panels are sealed with LP WeatherLogic Seam & Flashing Tape or Sealant. For full installation details, refer to the LP WeatherLogic Installation Instructions at [LPCorp.com/WeatherLogic](http://LPCorp.com/WeatherLogic).

Nominal 4' x 8', 4' x 9' and 4' x 10' panels have an integrated, water-resistive overlay.

AAMA 711 approved acrylic seam and flashing tape features one of today's highest quality adhesives or use the AAMA 714 approved liquid-applied sealant.
