## Premium Attendant

Premium Attendant is a self-managed automated attendant receptionist service allowing you to configure a flexible set of TUI menus for callers to your business. When turned on, it answers your calls automatically, and offers your callers a list of options (a “menu”) that you define. You can allow your callers to listen to messages (such as your opening times), to leave a message, or to be transferred to a real person. For example:

*Welcome to Bob's Tires. We are open for business right now. To hear directions to our store, press 1. To hear our opening hours, press 2. If you know the extension of the person you require, press 3, and then enter the extension followed by the pound key. If you know the name of the person you require, press 4, and then enter their name followed by the pound key. Or, for any other enquiries please press 0.*

You can create different menus for different times of the day and week that play according to the predefined schedules that you have created.

*Welcome to Bob's Tires. Unfortunately we are currently closed. To hear directions to our store, press 1. To hear our opening hours, press 2. If you wish to leave a message, press 3, and we will get back to you as soon as possible.*

Once you have set up Premium Attendant with these schedules and menus and recorded the necessary announcements, it will automatically play callers the correct menu depending on when they call.

### To set up your Premium Attendant, you should take the following steps.

- **Step 1. Configure your Premium Attendant schedule periods** by going to the Schedule tab and adding new periods.
- **Step 2.** Optionally, **Configure a number to forward callers to** whilst your Premium Attendant is turned off. If you skip this step, then until you have finished setting up the service, callers to your Premium Attendant will be played a message saying that the number is unreachable.
- **Step 3. Configure the menus** that you wish to offer your callers during the different schedule periods that you have just created.
- **Step 4. Record the announcements** that your caller will hear for the menu options that require them.
- **Step 5.** If (in Step 3) you chose to offer the option to use Dial by Extension, Dial by Name, Voicemail by Extension or Voicemail by Name, configure the extensions your callers can dial.
- **Step 6.** Use the Advanced Settings tab if you wish to change the default settings for the keys used in your menus or the way in which Premium Attendant handles caller error.
- **Step 7.** Turn on Premium Attendant.

## CommPortal Main Screen

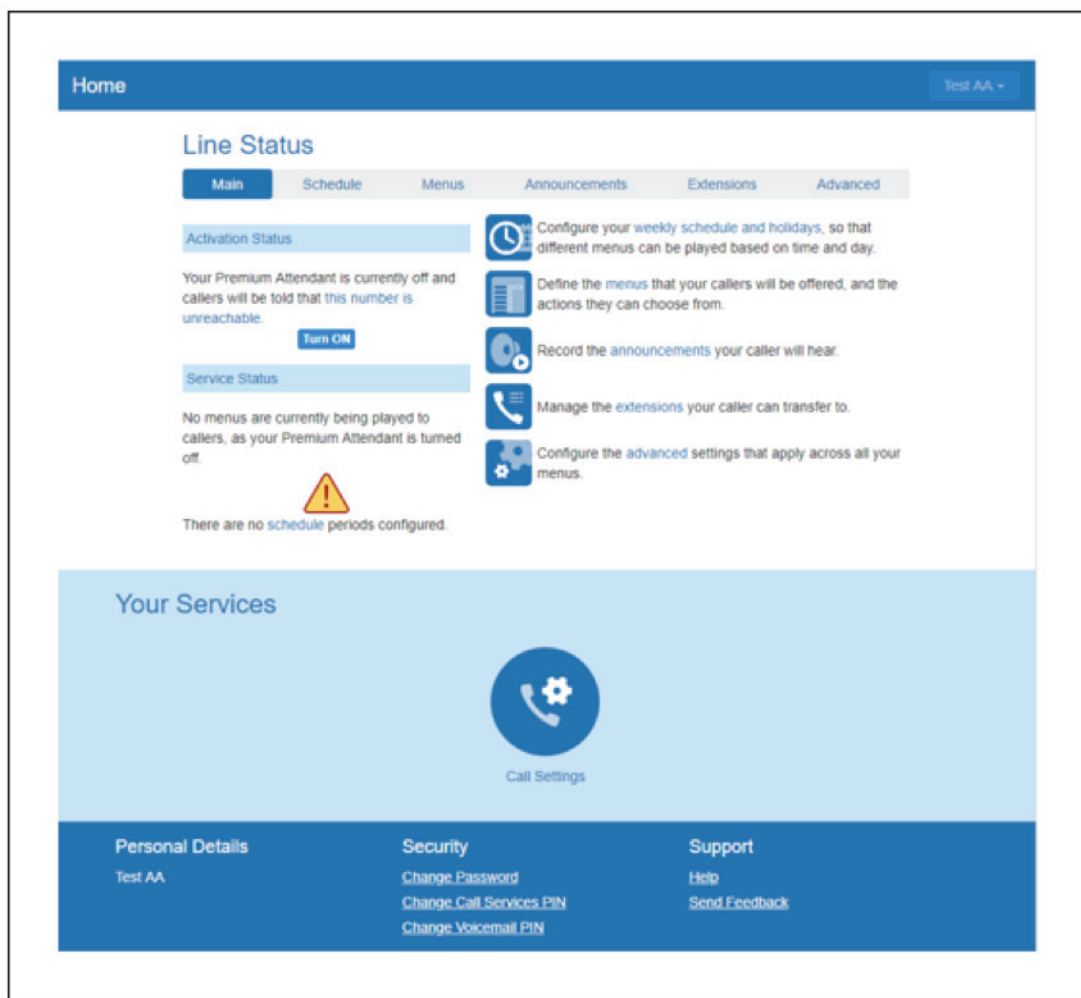

The Premium Attendant application is accessed through the CommPortal application.

When you go to the WOW! Business Web Portal link (<https://phone.wowforbusiness.com>) the first screen that appears is your login screen. Enter your telephone number and password.

**NOTE – Your initial password is provided in your Hosted VoIP Quick Reference Guide, or by asking your System Administrator.**

**Please note:** you will need to change your password. For security reasons, your new password must be 6–10 digits. For improved security, passwords cannot have a letter or number that repeats three or more times (for example “AMJ25554”), can only have up to two sequential numbers (for example “AMJ2345”) and the password cannot be the phone number.

## Premium Attendant Main Page

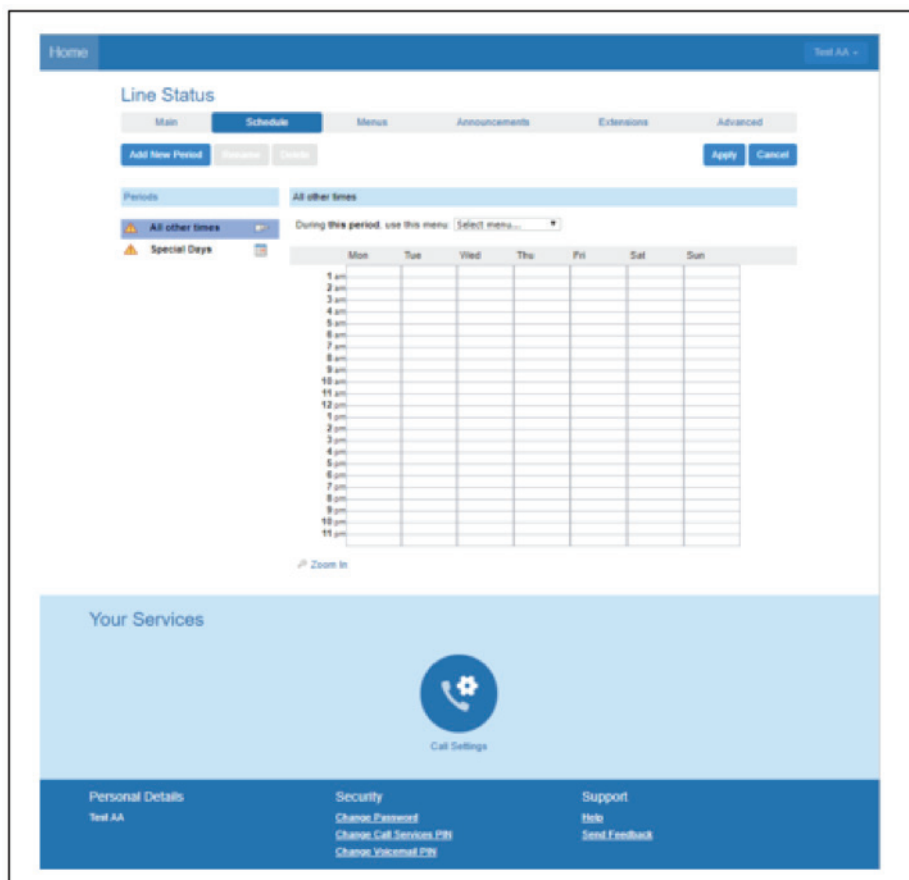

### This page allows you to see the following:

**Activation Status** – Turn Premium Attendant on/off

**Service Status** – Shows active menus and any configuration errors

This page also allows you to access the configuration of schedules, menus, announcements, extensions, and advanced functions.

## Schedule

You can configure up to eight Premium Attendant schedule periods, for example you might create one schedule for your normal business hours, a second schedule to cover the lunch period and an out of hours schedule for when your business is closed. You can create a separate menu for each of the schedules that you define.

### To create a new schedule:

- If this is the first time you have opened the Schedule tab, you can click on the links to either use a blank schedule or an example schedule as the basis for your new schedule. At all other times, use the 'Add new period' button to create a new schedule. You will see a warning pop-up if you attempt to add a new period once you have configured the maximum number of schedule periods.
- You will be prompted to give the new schedule a unique name, and a description.
- For each schedule that you create, you should configure the hours, for each day from Monday to Sunday, when this schedule should apply. You do this by "coloring in" the grid by clicking on the appropriate cells. You can change several cells at once by clicking and dragging. Each schedule period is shown in a different color.
- Each schedule must have an associated opening menu before you can turn your Premium Attendant on. You can either choose an existing menu from the dropdown list or use the 'create new menu' option to add a new one.
- If you select 'create new menu' you will then be prompted to enter a unique name and a description for the menu. You can only use this option if your Premium Attendant is turned off. You will configure this menu and its announcements later in the set-up process.

## Schedule (cont.)

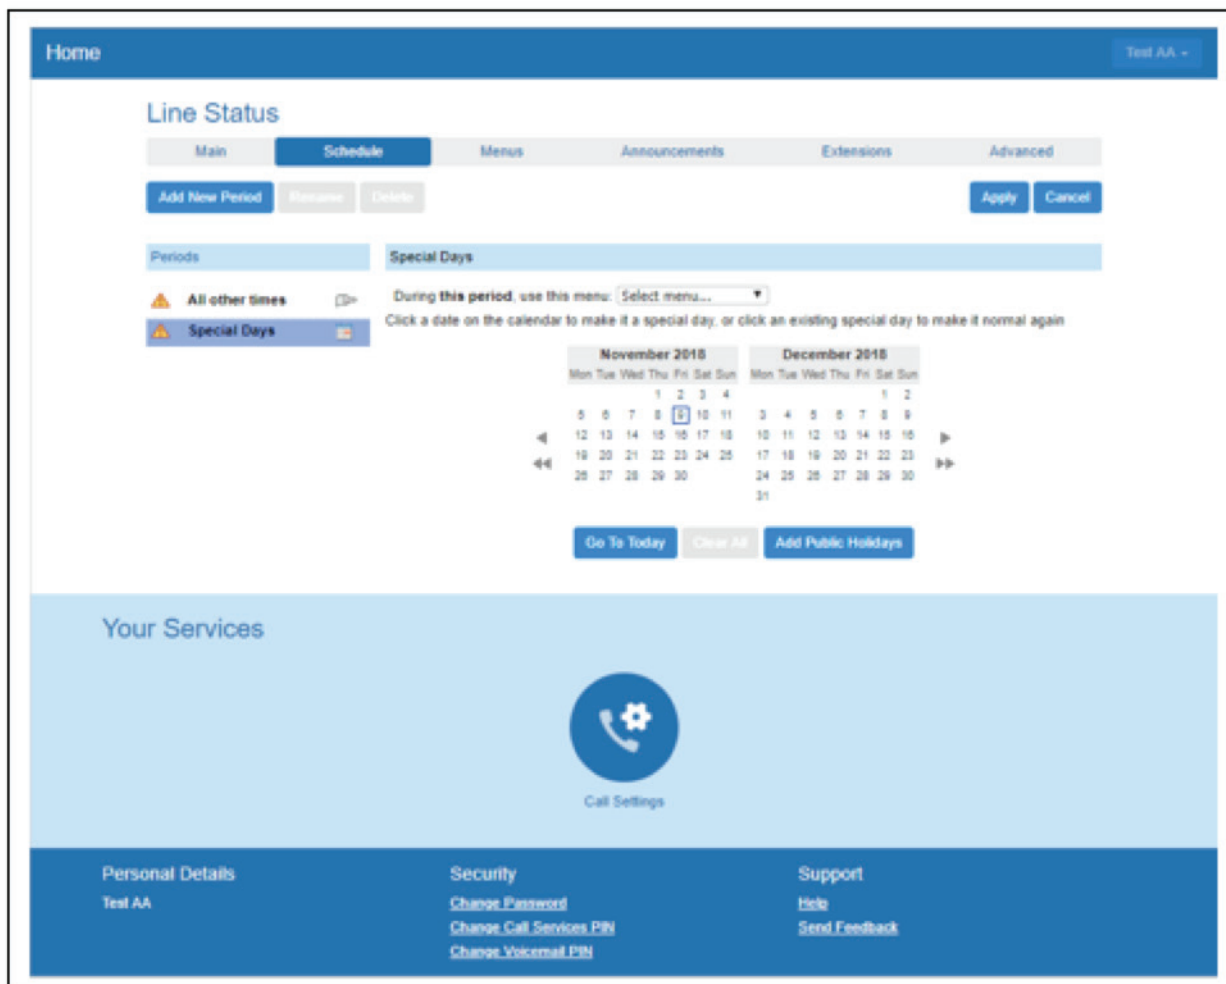

Once you have created them, these schedules are shown in alphabetical order in the Periods panel on the Schedules tab. If there are any errors in any of these schedules, you will see a  icon alongside the schedule name. You can subsequently edit a schedule by selecting it, making your required changes, and then clicking on the Apply button to save your updated schedule.

On first use, these schedules will be shown as having errors until you have specified the opening menu that you wish to associate with each of these schedules. You will not be able to turn Premium Attendant on until you have selected these menus and created the necessary announcements. These two schedules cannot be deleted or renamed.

### Switching between schedule periods

If your Premium Attendant is turned on, you can only switch from one period to another if the currently selected period has no errors in its menu selection.

## Special Days

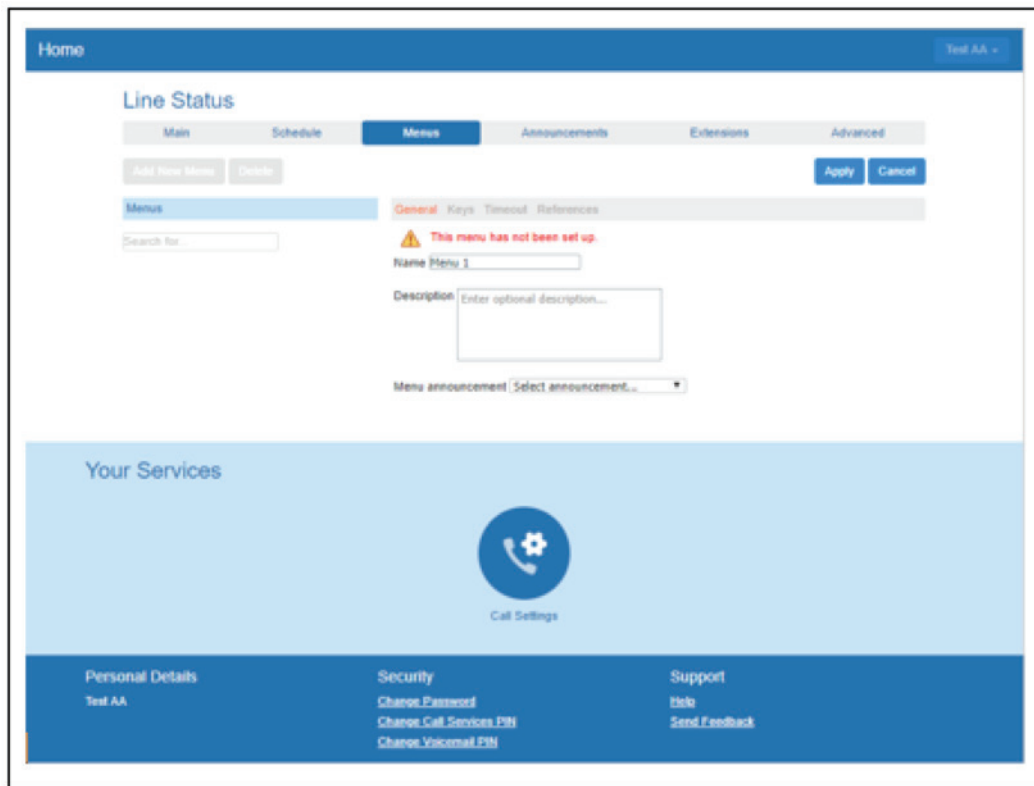

There are two schedule periods already created in this list to cover 'at all other times' and 'special days'.

- The 'all other times' schedule is used at the times that are not defined in any of your other schedules. This schedule is always the next to last schedule in the list, and is colored in white.
- The Special days schedule covers public holidays and other special one-off days when your business is closed. This schedule is always the last schedule in the list, and is colored in black.
  - You should select this schedule and use the calendar to configure any special one-off dates to be included in this schedule.
  - If you always close on public holidays, you can easily select all of the public holidays for your locale by clicking on the 'Add public holidays' button.
  - When you have finished editing the schedule, press **Apply** to save your changes.

## Menus — General Tab

The screenshot displays the 'Line Status' configuration page for a WOW! Business account. The 'Menus' tab is selected, showing a form to configure a menu. The form includes a search bar, a 'Name Menu 1' field, a 'Description' field, and a 'Menu announcement' dropdown. A warning message indicates that the menu has not been set up. Below the form is a 'Your Services' section with a 'Call Settings' icon. The bottom navigation bar contains links for 'Personal Details', 'Security', 'Support', and 'Test AA'.

### Configuring your Premium Attendant menu(s)

Your Premium Attendant menu configuration determines what options your callers are offered, and what announcements they hear.

The following instructions describe how to set up and edit your Premium Attendant menus. You will need to repeat these steps for each of the menus that you need to create. From the Menu page, you should use the following tabs to set up and edit your Premium Attendant menus. The list of existing menus will always be visible in the left-hand panel of the screen — you should ensure that you have the correct menu selected before making any changes using the following tabs.

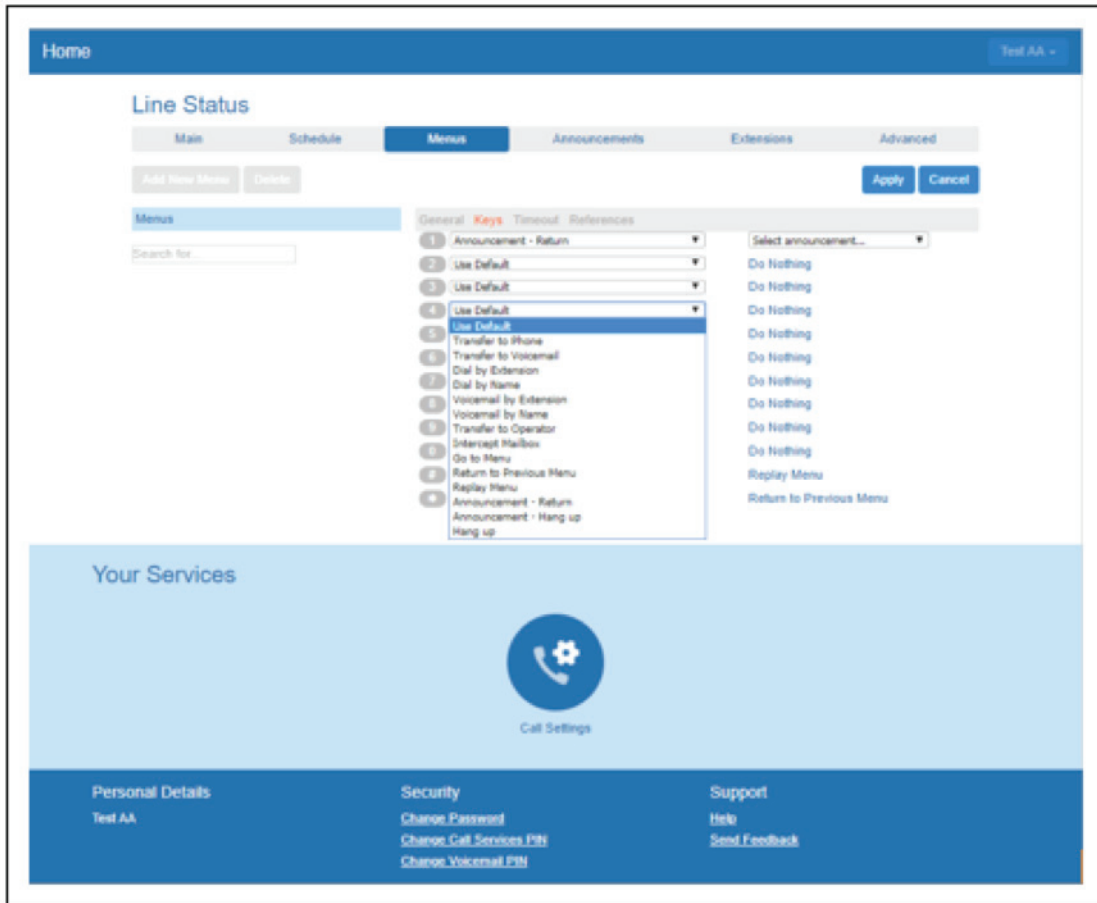

- **Step 1.** Use the General tab to add a new menu, or edit or delete a menu once you have selected it in the list on the left-hand side of the page.
- **Step 2.** Use the Keys tab to assign actions to the keys that a caller can press to navigate the menu
- **Step 3.** Use the Timeout tab if you wish to override the default timeout behavior for this menu
- **Step 4.** If you are editing or deleting an existing menu, use the Reference tab if you want to see if any other menus or periods make reference to this menu.

## Menus — General Tab (cont.)

Use the General tab to configure the menus to be associated with different schedule periods. Existing menus are listed on the left-hand side of the screen, and an icon will be shown alongside any menu that have errors. The General tab will display a message if a selected menu has errors or warnings and all menus that contain errors or warnings will have an icon alongside their name indicating this. These will be dismissed once these errors are fixed or the warnings resolved, and 'Apply' has been pressed to save the changes.

- Navigate to the General tab by clicking on the **Menu tab** in Premium Attendant.
- To add a new menu, click on the **Add new menu** button.
  - You will then be prompted to add a unique name and a description for this menu.
  - You must specify the menu announcement to be used for this menu using the drop-down box. You can either choose an existing menu announcement or opt to create a new one for this menu. You will record this announcement later in the set-up process.
- To edit an existing menu, you should select the menu that you want to edit from the list on the left-hand side of the page
  - The menu list in the left hand panel can be up to 150 menus long, so you can use the Search facility to enter part or all of the name to find the menu you wish to edit more easily.
- To delete a menu, select the menu from the list on the left-hand side, and click the **Delete** button.
  - You will see a pop-up asking for confirmation that you wish to delete it.
  - You will also see a pop-up warning if this menu is referenced by another menu or period.
    - › If your Premium Attendant is turned on, you cannot delete a menu that is referenced by a period. If you attempt to delete a referenced menu, a pop-up will indicate which of your period(s) use this menu. You will need to change the menu associated with these schedule period(s) before you can delete the menu you have currently chosen to delete.

## Menu — Keys Tab

You should use the Keys tab to specify what should happen when a caller selects a particular option from your menu. **Step 1.** Navigate to the Keys tab by clicking on the **Menu tab** in Premium Attendant (as described above). **Step 2.** Ensure that the correct menu is selected on the left-hand side of the screen. **Step 3.** Configure the options that you want to offer to your callers on the selected menu. **Step 4.** Apply the changes you have made to your menu configuration by pressing the **Apply** button at the bottom of the screen.

### Configuring Options

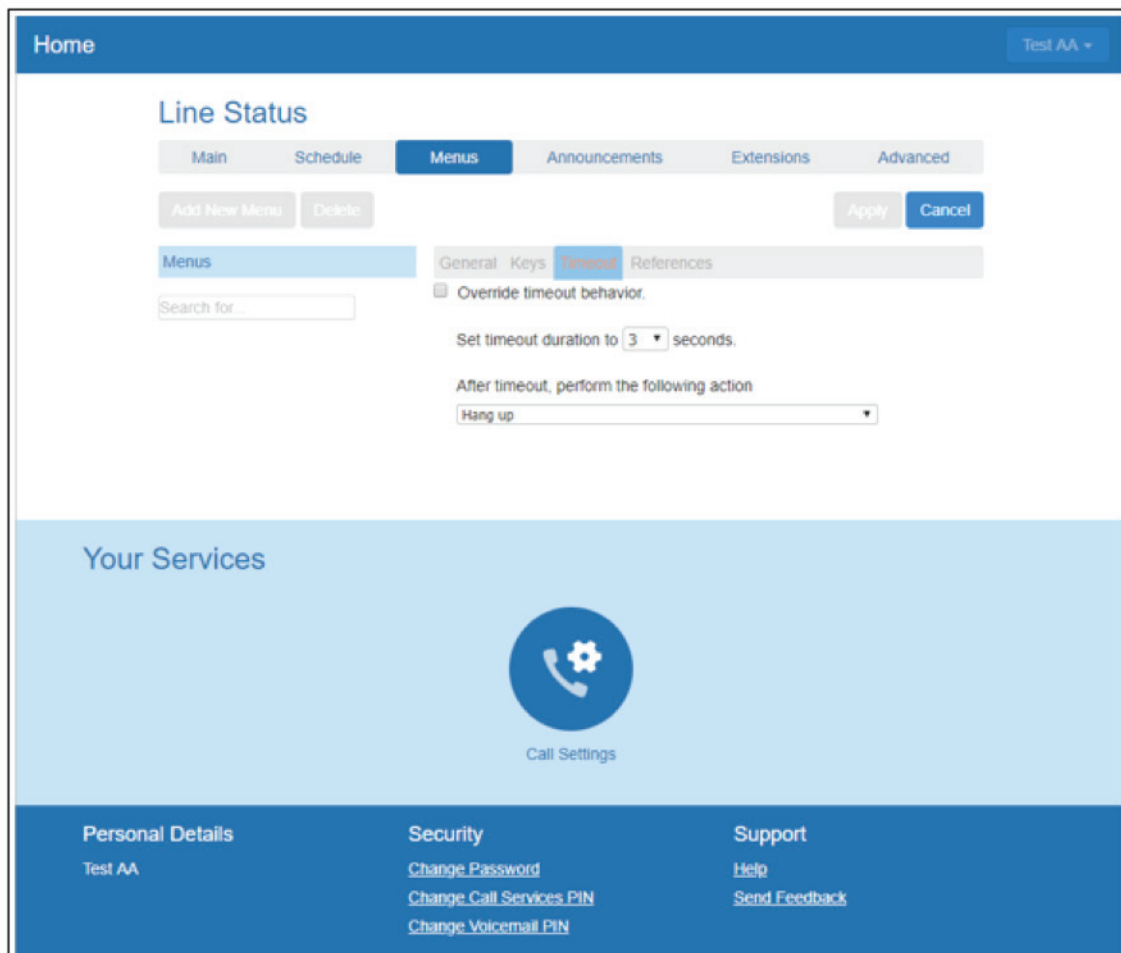

- The screen lists the keys 1-9, 0, # and \*. Alongside each key, you will see a drop-down box, which you can use to select what will happen when a caller presses that key on their phone while in this particular menu. For each option that you wish to offer your callers, decide which key they will press to access it, and select the appropriate option from the corresponding drop-down. For example, if you want to play an announcement describing your opening hours when a caller presses 1, you would assign key 1 to 'Announcement return'.
- Choosing an action from the drop-down box dynamically brings up any details that need to be completed in the next column: in the above example, you would need to enter the name of the announcement to be used.

## Menus — Keys Tab (cont.)

- The screen will use an icon alongside a key assignment to indicate if there are any configuration errors, for example because an announcement is missing audio.
- For each key you can choose from the following options.
  - **Use default.** If a caller presses this key, they experience the global key configuration for this event (set using the Advanced tab). This option is selected by default for all keys on new menus. If you select this option for a key, the default value will be shown in the next column as a link to the Default keys page on the Advanced Settings page. You can change the default behavior of these keys as described in Advanced Settings. If the default value is 'Do Nothing', a caller will be told that the option is not recognized if they press this key.
  - **Transfer to Phone.** If a caller presses this key, they are transferred to a phone number of your choice. For example, you might want to allow callers to “press 4 to speak to a sales representative”. You must also enter the phone number you wish to transfer to in the box that will appear to the right of the drop-down. Enter the phone number exactly as you would dial it from a phone.
  - **Transfer to Voicemail.** If a caller presses this key, they will be transferred directly to a voice mailbox of your choice and invited to leave a message. For example, you might want to allow callers to “press 5 to leave a message for one of our sales team”. You must also enter the phone number of the mailbox you wish to transfer to in the box that will appear to the right of the dropdown. The number you enter must be the 10 digit phone number of a mailbox on this system.
    - › **Dial by Extension.** If a caller presses this key, they can choose who they want to speak to within your organization by dialing an extension number. If you assign a key to Dial by Extension, you must also do the following.
      - › Define the set of extensions that your callers can enter and the phone numbers that each will transfer to. *Note: do not attempt to do this until you have finished configuring your menu, and have applied your changes in step 4.*
      - › Give your callers suitable instructions as part of your menu announcement. For example, if you assign key 4 to Dial by Extension, then your menu announcement should include wording similar to: “if you know the extension of the person you require, press 4, and then enter the extension followed by the pound key.”
  - **Dial by Name.** If a caller presses this key, they can choose who they want to speak to within your organization by dialing their name. If you assign a key to Dial by Name, you must also do both of the following.
    - › Define the set of extensions that your callers can enter, their names and the phone numbers that each will transfer to. *Note: do not attempt to do this until you have finished configuring your menu, and have applied your changes in step 4.*
    - › Give your callers suitable instructions as part of your menu announcement. For example, if you assign key 4 to Dial by Name, then your menu announcement should include wording similar to: “if you know the name of the person you require, press 4, and then enter the name followed by the pound key.”
  - **Voicemail by Extension.** If a caller presses this key, after entering the required extension number, they are transferred directly to a MetaSphere mailbox without ringing the subscriber's phone. You will see a pop-up if you enter a number that doesn't have a mailbox. If you assign a key to Voicemail by Extension, you must also do both of the following.

- › Define the set of extensions that your callers can enter and the phone numbers that each will transfer to. *Note: do not attempt to do this until you have finished configuring your menu, and have applied your changes in step 4.*
  - › Give your callers suitable instructions as part of your menu announcement. For example, if you assign key 4 to Voicemail by Extension, then your menu announcement should include wording similar to: “if you know the extension of the person you wish to leave a message for, press 4, and then enter the extension followed by the pound key.”
- **Voicemail by Name.** If a caller presses this key, after entering the required name, they are transferred directly to a MetaSphere mailbox without ringing the subscriber’s phone. You will see a pop-up if you enter a name that doesn’t have a mailbox. If you assign a key to Voicemail by Name, you must also:
  - Define the set of extensions that your callers can enter, their names and the phone numbers that each will transfer to. *Note: do not attempt to do this until you have finished configuring your menu, and have applied your changes.*
  - Give your callers suitable instructions as part of the announcement. For example, if you assign key 4 to Voicemail by Name, then your announcement should include wording similar to: “if you know the name of the person you wish to leave a message for, press 4, and then enter the name followed by the pound key.”
- **Intercept Mailbox.** If a caller presses this key, they are transferred to the mailbox configured globally for Premium Attendant. The telephone number for this mailbox is configured using the Advanced, Other Settings tab.
- **Go to Menu.** If a caller presses this key, they are transferred to another Premium Attendant menu. You should select the menu from the dropdown box or choose ‘create new menu’, entering a unique name and description for this menu in the pop-up that will appear. If you subsequently delete the menu linked to on this key, the dropdown will display ‘Select menu’ and the key action will be marked with an error.
- **Return to Previous Menu.** If a caller presses this key, they are returned to the previous menu. If there is no ‘previous menu’ to return to, Premium Attendant will simply replay the current menu.
- **Replay Menu.** If a caller presses this key, Premium Attendant replays the current menu.
- **Announcement - Return.** If the caller presses this key, they will hear an announcement and then be returned to the menu. You should use the drop down box to select the announcement to use, or create a new one.
- **Announcement Hang-up.** If the caller presses this key, they will hear an announcement and Premium Attendant will then hang up the call.
- **Hang-up.** If a caller presses this key, Premium Attendant hangs up the call without playing an announcement.

## Menus — Timeout Tab

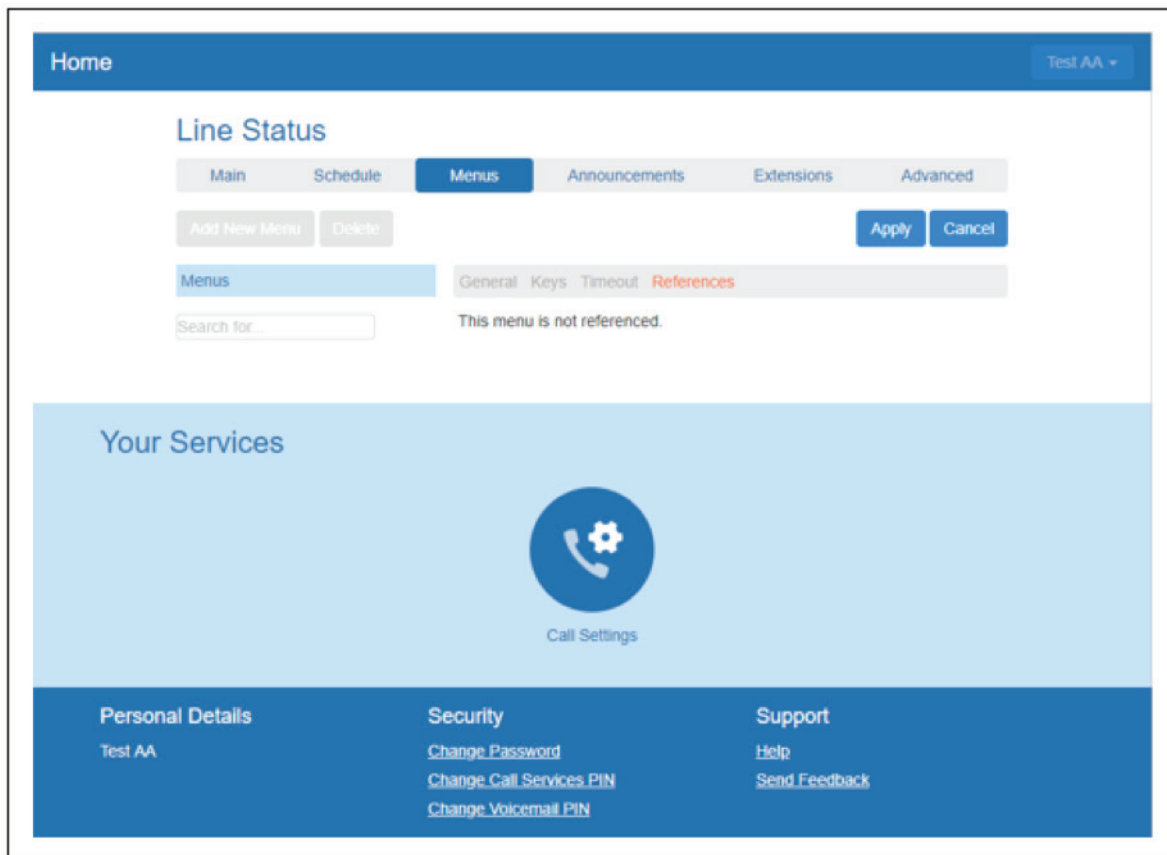

The screenshot shows the 'Home' dashboard with a 'Test AA' button. The 'Line Status' section has tabs for 'Main', 'Schedule', 'Menus', 'Announcements', 'Extensions', and 'Advanced'. The 'Menus' tab is active, showing a search bar and buttons for 'Add New Menu', 'Delete', 'Apply', and 'Cancel'. Below the search bar, the 'Timeout' sub-tab is selected, displaying options to 'Override timeout behavior', set a 'Set timeout duration' to 3 seconds, and choose an 'After timeout, perform the following action' (currently set to 'Hang up'). A 'Your Services' section with a 'Call Settings' icon is also visible. The bottom navigation bar includes 'Personal Details' (Test AA), 'Security' (Change Password, Change Call Services PIN, Change Voicemail PIN), and 'Support' (Help, Send Feedback).

### Timeout options

If you want to change the timeout behavior on an individual menu, use the Timeout tab to override the default timeout behavior for all your Premium Attendant menus (set under the Advanced tab).

- Navigate to the Timeout tab by clicking on the Menu tab in Premium Attendant.
- Select the menu from the list on the left-hand side.
- Set the new timeout duration in the drop-down box. You can enter any value between 0 and 10.
- Specify the action to be taken if a caller fails to press a key or to select a valid extension or name to transfer to within this time.

## Menus — References Tab

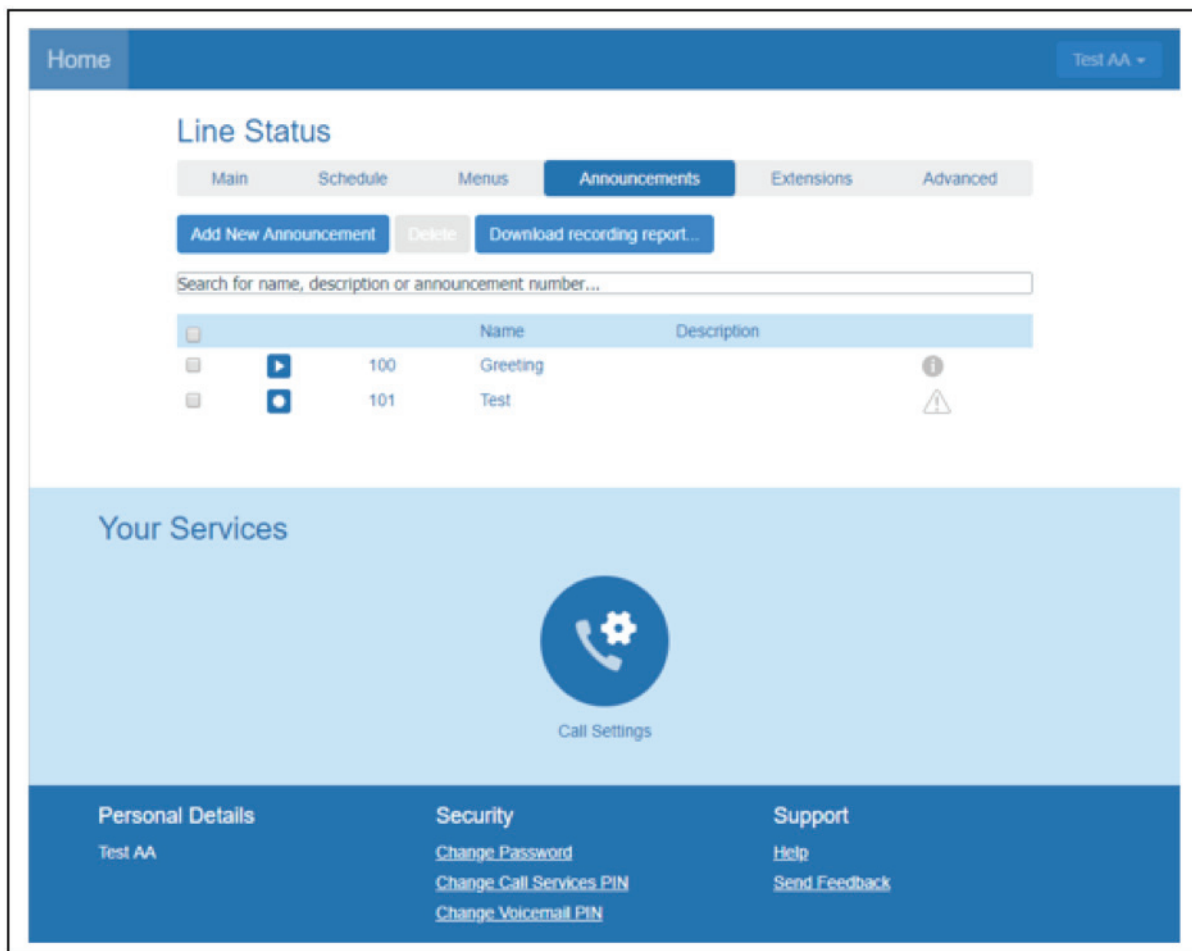

The References tab shows which menus and schedule periods make reference to the menu currently selected on the left-hand side. To check if a menu is referred to by another menu or schedule:

- Navigate to the References tab by clicking on the Menu tab in Premium Attendant.
- Select the menu you want to check the references for.
- You will then see a list of all the menus and schedule periods that use this menu. You can click on these links to go to these menus and schedules, for example if you want to change the menu that these reference.
- If there are no references, you will see the message 'This menu is not referenced'.

This feature is useful if you want to delete a menu, as you can only do this if the menu is not referenced by any menus or schedule periods.

## Announcements

### Premium Attendant Menu Announcements

The Announcements tab lists all the announcements that you have already created when setting up your menu configuration, and uses icons to indicate the status of each one. As this list can be up to 300 items long, you can use the search box to find the announcement(s) you wish to work with, by typing in all or part of either the name or description, or using the recording ID number. Note that the list of announcements contains only those for which the recording can be changed. There are also system announcements, for instance the announcement played when the user presses an invalid key, that cannot be changed or listened to via the web interface.

- The icons on the left hand side are used as follows:

-  – indicates that a recording exists for this announcement. Clicking on the icon plays the announcement
-  – indicates that a recording does not exist for this announcement.

## Announcements (cont.)

- The icons on the right hand side indicate the following states:

— the announcement is referenced by one or more menus

— the announcement is not referenced by a menu

— the announcement is referenced by a menu but does not have a recording.

To create a new announcement:

- Click on the **Add new announcement** button.
- Enter a unique name and description in the pop-up overlay that will appear.
- This will also launch the Recording overlay to enable you to record the announcement. You can either do that now following the instructions in **Recording announcements** or close the overlay and record the announcement at a later stage.

To delete an announcement:

- Select it by ticking the checkbox on the far left-hand side of the announcement.
- Press **Delete**.
- You can use the checkbox in the title bar to select all the announcements if you wish to delete them all. Note that if you tick the checkbox in the title bar, and then do a search to filter the announcements list and then press **Delete**, you will delete all the announcements and not just those shown.
- If you attempt to delete an announcement that is still referenced by a menu, you will see a warning popup asking you to confirm or cancel the operation.
- You cannot delete a menu announcement if this menu is used by any of your schedule periods. In this case, Premium Attendant will display a pop-up to indicate this and the selected announcement(s) will not be deleted.

You can use the **Download recording report** button to generate a CSV format list of all your announcements that will show the number, name and description of each announcement, plus whether audio is present and whether it is referenced by an existing menu. This process may take several minutes if you have a large number of announcements.

Clicking on any part of the details for an announcement on this page brings up the recording overlay.

## Recording Premium Attendant announcements

When using Premium Attendant, all messages that are played to your callers must be recorded by you in advance.

Premium Attendant offers two ways to record your messages.

- If your computer has a sound card and microphone, you can use these to record your messages directly from the Premium Attendant configuration pages.
- Alternatively, if you do not have the  necessary equipment (or if you simply prefer), you can record your messages using your telephone.

## Announcements (cont.)

### Recording messages directly from your computer

Anywhere you see  record you can click on the icon to bring up the announcement recording control. This allows you to record your message directly via your computer's microphone.

Once you have recorded a message, the record will change to listen/change. Clicking on this icon will again bring up the announcement recording control, which will enable you to play back, and if you wish, overwrite your recording.

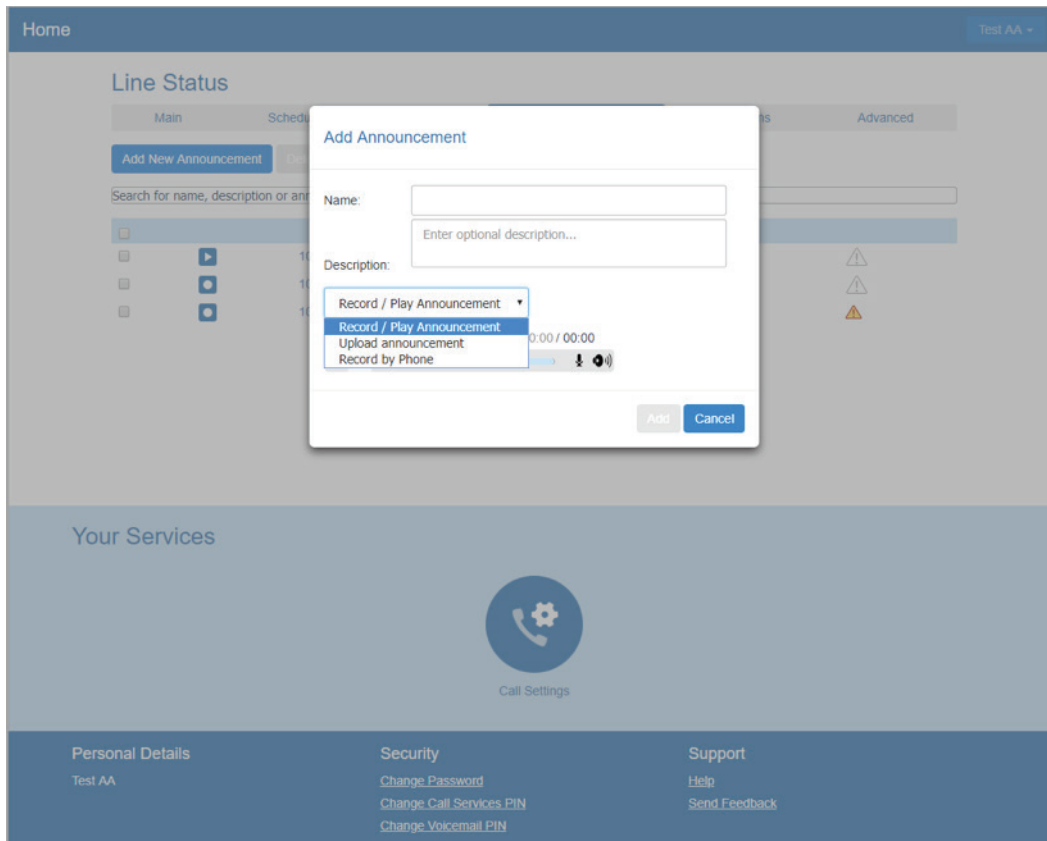

### Recording overlay

You can use the recording overlay to edit the name and description of the announcement as well as record the audio message.

The recording overlay has three tabs that can be opened using the XX icon — opening one automatically closes the other tab. These tabs allow you to:

- record the audio for an announcement or, if a recording has already been made, listen to the announcement.
- upload a recording — this will show the current filename and duration if audio already exists for this announcement. You should use the **Browse** button to find required file, select it and then click on **upload** to upload it. You will see a warning message if the file is not in a valid wav format, no recording has been selected, the recording is too long or the file is too big.
- record by phone — this tab gives brief information on how to use the self-care TUI to add audio to this announcement.

## Recording a Message

A number of controls are provided for recording your message.

-  Starts recording. This will overwrite any message you have previously recorded.
-  Plays back your recorded message. This action will be unavailable if you have not yet recorded a message.
-  Stops recording or playing the message.

This control allows you to adjust the gain of your microphone. While recording, the  lights above this control will show how loud the signal is from your microphone. If the gain is set correctly then several green lights should appear while you are recording. If only one or two appear, then the gain is set too low and your message will be too quiet. If red lights appear then the gain is set too high and your message will be distorted.

This control allows you to adjust the playback volume. You can adjust the slider to set a particular volume level.

When you first attempt to record a message, an “Adobe Flash Player Settings” overlay will appear. Ensure that the **Allow** radio button is selected, and if you do not wish to be shown these settings in future click the **Remember** checkbox.

## Recording a Message (cont.)

To record a message you need to carry out the following steps.

- When you are ready to record your message, press the  button.
- Read your message into your microphone, and when you have finished, press the  button.
- Playback your message to check that it has recorded correctly by pressing the  button. If there is a problem with the recording, e.g. you cannot hear it, or it is very quiet, see the section on **troubleshooting**.
- If you are not happy with your message content, then record a new message by pressing the record button again. This will overwrite your previous message.

## Recording Messages Using Your Telephone

If you wish to record your initial greeting and announcements using a telephone:

- Follow the instructions above for **setting up your Premium Attendant menu**, but don't click on any of the  record icons that appear.
- Once you have configured your menu options, press **Apply** as usual to save your changes. You will be warned that you have not yet recorded an initial greeting, and if you have assigned any keys to 'Play announcement', you will also be warned that you have not recorded the announcements to play. Ignore this warning.
- Dial your Premium Attendant service access number from your telephone, and select the appropriate options from the menu you will hear. You will be given the opportunity to record your initial greeting, as well as the announcements for any 'Play announcement' keys you have set up.

*Note: if you wish to offer your callers the option to listen to announcements in your Premium Attendant menu, you must use the Web interface to assign the appropriate keys to 'Play announcement' before you can turn on your Premium Attendant.*

## Troubleshooting Your Recordings

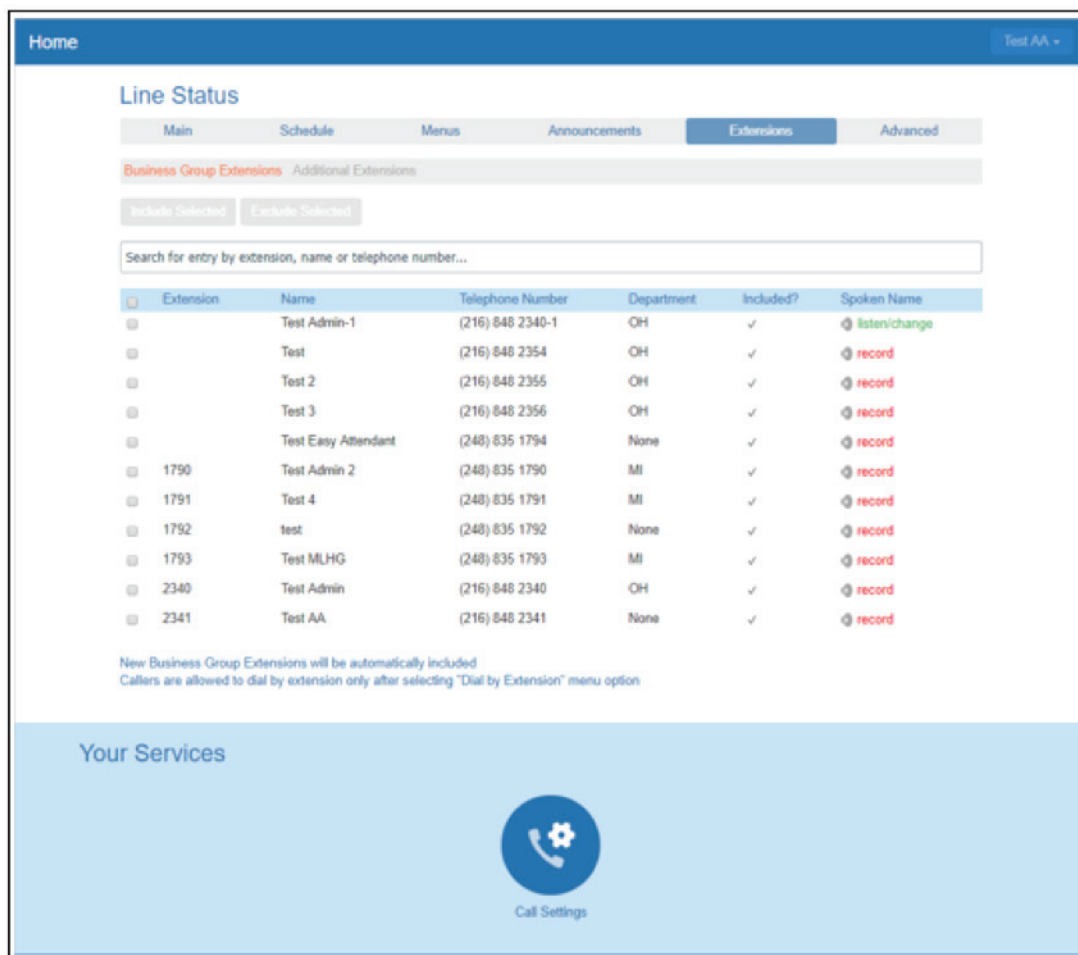

### I have recorded my message, but when I try to play it back I cannot hear anything.

- Check you have actually recorded something. The length of the current recording is shown as e.g. 0:01:35 (1 minute and 35 seconds). If the current recording length is 0 or much lower than expected then try recording your message again.
-  Check that playback is not muted, and that the volume is turned up. If playback is muted then the icon will be displayed — press this to un-mute the speaker. Volume can be adjusted using the volume slider described above.
- Try re-recording the message, and as you are recording, watch the  lights above the gain control.
- If no lights appear, or only one or two appear, then check the following.
- Increase the gain of your microphone by moving the gain control to the right hand end.
- Click the  microphone icon to the left of the gain control to bring up the “Adobe Flash Player Settings” and make sure that the Allow option is selected. Click on the  microphone icon at the bottom of this settings box and check that the correct microphone is selected in the dropdown, and that the record volume is turned up.
- If you are using an external microphone, check that this is plugged in correctly. If this still doesn't solve the problem, then it may be that your microphone has been muted by the operating system (e.g. Windows) — refer to your operating system help for further information.
-  If several green lights appear consistently while recording your message, then it is likely that your message has recorded correctly and the problem is occurring when playing it back. If you are using external speakers, check that these are plugged in correctly and turned on. If this does not resolve the problem, then it may be that your speaker has been muted by the operating system (e.g. Windows) - refer to your operating system help for further information.

### I have recorded my message, but when I try to play it back it is distorted.

This may be because your microphone gain is set too high. Reduce the gain by moving the gain control to the left hand end.

## Extensions

New Business Group Extensions will be automatically included  
 Callers are allowed to dial by extension only after selecting "Dial by Extension" menu option

### Your Services

  
 Call Settings

### Configuring the extensions callers can dial

- For each extension, you can select whether or not to include it in the list available to callers.
- You may record or upload a name recording by clicking on the "record" link for the line.
- If the line already has a name recorded for voicemail, then this can be used as the name recording for callers.

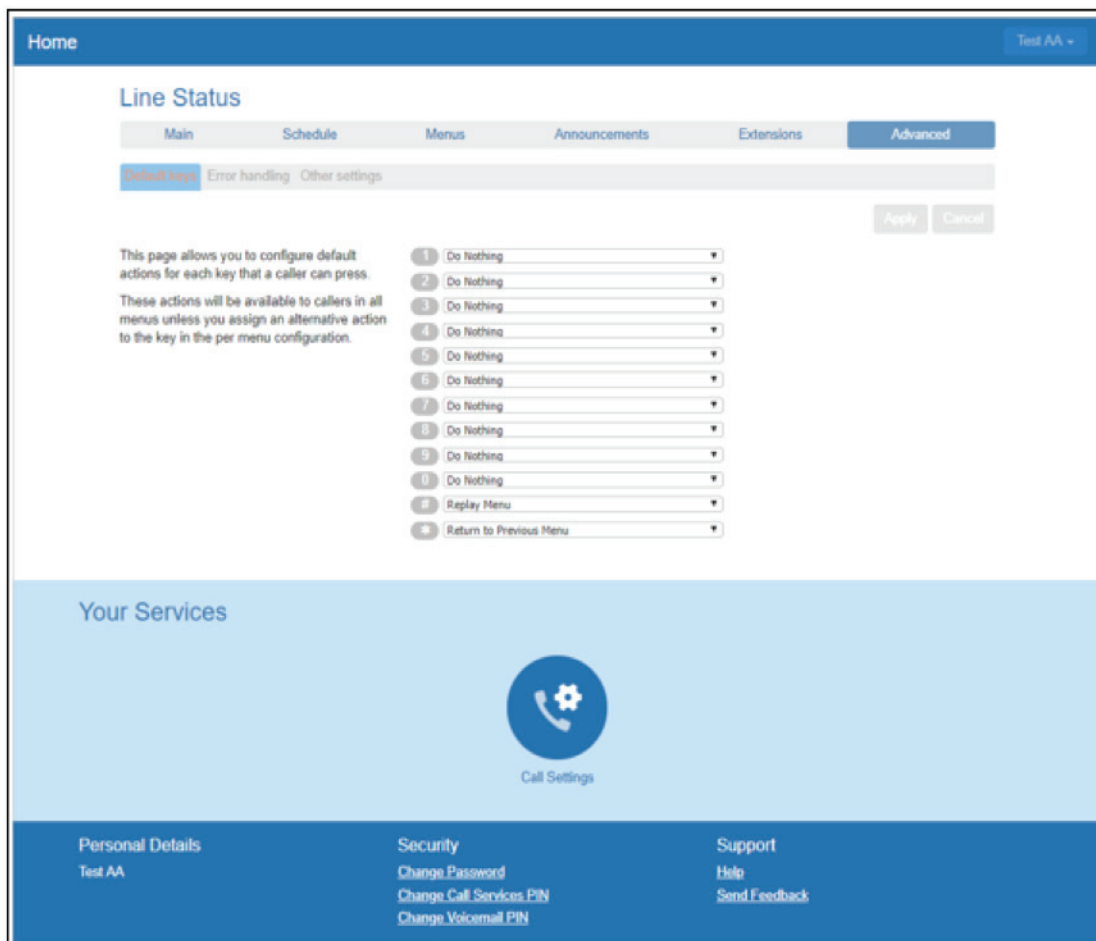

To use extensions, you must define the set of extensions that callers can dial. For each extension you must specify the extension number (a short number of your choice, such as 107), the extension's name and the phone number that your caller should be transferred to if they dial this extension.

- To configure your extensions click on the Extensions tab at the top of the Premium Attendant page.

## Extensions (cont.)

- To add a new extension, click the **Add Extension** button under the Additional Extensions tab. You will then be prompted for the following.
  - **Extension.** This is the extension number that your callers will dial. It can be any number of your choice between one and seven digits long. It must not be the same as any other extensions you have already configured.
  - **Name.** This is the name that your callers will dial. Both the first and last name must contain at least 2 dialable characters. You will also be prompted to record a spoken name for this extension by recording or uploading a name recording by clicking on the 'Record' link. This is played to callers if they enter a name that is not unique to allow them to refine their search. For example, if there are two extensions called "John" and the caller enters "John", they hear the full names of both the extensions and can choose between them. Extensions that don't have a spoken name recorded can't be reached by Dial by Name or Voicemail by Name options. Refer to the section "**Recording an announcement**" for more information on recording spoken names.
  - **Telephone Number.** This is the number that callers will be transferred to if they dial this extension. Enter the phone number exactly as you would dial it from a phone (although note that business group short codes and extension codes are not permitted).
- To edit the details for an existing extension, find it in the list on the left-hand side and select it. If you have a large number of extensions, you can use the search box to find the extension you wish to edit.
- To delete existing extensions, select the check box alongside the extension you wish to delete, and then press the **Delete Selected** button.

## Advanced Functions

The Advanced tab allows you to configure the following settings for your Premium Attendant that will apply whenever you select a default value.

### Default Keys

You can use the Default keys tab to configure the default action for the keys on the telephone. This determines what each key will do if it is set to 'Use default' in any of your Premium Attendant menus. You can modify the global behavior of the keys 1-9, 0, # and \*. Each of them can take the following values. With the exception of 'Do Nothing', all these values are described in Configuring your Premium Attendant menu(s). To change the existing default value for a key, select one of the following from the drop-down box alongside the key:

- **Do Nothing** — if a caller presses a key that has this value, they will be told that the option is not recognized.
- **Transfer to Phone**
- **Transfer to Voicemail**
- **Intercept Mailbox**
- **Dial by Extension**
- **Return to Previous Menu**
- **Replay Menu**

## **Additional Support**
