

**Planning & Equipping.**  
Efficient workshop solutions  
for optimal patient treatment.

# Planning & Equipping.

Ottobock has been a reliable partner for planning and equipping orthopaedic workshops around the world for over 50 years. From individual consulting to detailed planning and logistics to installation and longterm maintenance beyond your project. Our team creates proven solutions that are developed through exchange with our international network of orthopaedics businesses to offer you highest quality and functionality. Our products and workshop equipment comply with the latest safety and health standards in the fields of orthopaedic technology, orthopaedic footwear specialism and rehabilitation.

# Product portfolio.

**Custom fabrication**  
Customisable product portfolio according to your wishes and requirements

## **Machines**

Safe, efficient and ergonomic machinery, including:  
Socket router, Flexam milling machine and belt sander

## **Suction technology**

Enhanced occupational health and safety thanks to safe, low-noise dust and vapour extraction

## **Alignment equipment**

Innovative solutions for precise component alignment for the patient

## **Workshop equipment**

From the classic workbench to the specialised workstation

## **Patients and treatment area**

High-quality products for anamnesis, adaptation and therapy

## **Tools**

of the highest quality and quickly available

## **Consumables**

of the highest quality and quickly available

## **Special solutions**

Workshop containers, mobile workshops or even tailored solutions for special requirements

## **Planning & Equipping**

**Installation**  
Get started immediately with experienced assistance in the care of setting up your system. You get a comprehensive, detailed introduction and start working straight away.

# Services.

## Consulting

Experience and know-how: With expertise gained from over 4.000 planning projects around the world, we can find the optimal solution for every workshop.

## Workshop optimisation

Innovative and connected: From **OrthoLean** to **Ottobock work. hub** – we optimise work processes in the workshop and offer cloud based applications for collecting and analysing machine data so they can be used more efficiently.

## Workshop planning

Individually tailored: We plan your workshop 100 per cent based on your personal circumstances and needs and find a solution together – down to the last detail.

mediately: Our assembly team takes up, assembling and systems and products. orehensive and unction – and can straight away.

## Maintenance

It's going like clockwork: Contractual maintenance keeps your machines up to date at all times – and you can focus entirely on your work.

## Service

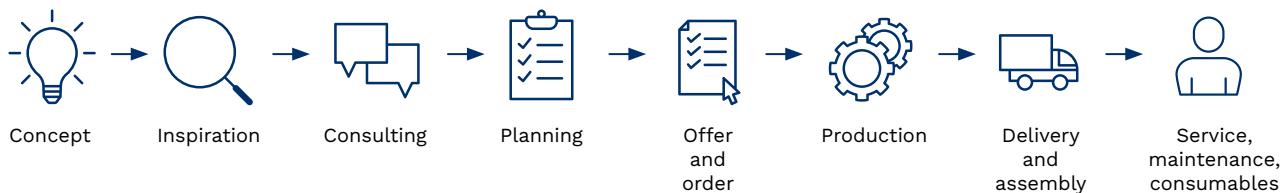

On site or remotely: Our service team is there for you.

# Your way to an efficient workshop.

We are at your service – from the idea to the implementation of your project and beyond.

## The right partner for

- Individual procurement
- Update/addition/conversion of a sub-area
- New workshop projects
- Relocation of an existing workshop

## Consulting

During an on-site consultation, our technical consultant works with you and your architect to record all the relevant data and requirements and work out a suitable solution for you. On request, we can also carry out workflow analyses in your company and incorporate them into workshop planning so you can benefit from efficient and optimised treatment processes.

## Planning

After receiving all the information, our experts will develop an initial proposal for your project within a few weeks. In several rounds of coordination, we then adapt the plans so that they are perfectly tailored to your needs. The final drawing contains all necessary connections so that they can be prepared before delivery.

## Delivery and assembly

We deliver all products professionally and take care of installation, putting into service and training in all new machines, devices and tools. We are at your service even after the project is finished. On-site service and maintenance are just as much a part of what we do as the prompt delivery of all wear and tear and spare parts. We would also be happy to advise you on technical matters.

**Would you like to experience our products live?**

Visit us at our showroom at Ottobock Equipment in Nieuwkuijk or at our Patient Care clinic in Göttingen.

# Innovative concepts for your workshop.

As part of Planning & Equipping, we don't just equip your workshops with tailored equipment for your treatment processes. We think one step ahead: Our innovative concepts **OrthoLean** and **Ottobock work.hub** will modernise, streamline and digitise your workshop.

## **OrthoLean**

The goal of the **OrthoLean** concept is to enable optimally coordinated working processes that minimise waste. Because streamlined processes help to reduce production costs – and maximise profits as a result. The focus isn't working faster but rather maximising the proportion of value-added process steps and eliminating unnecessary tasks. The products are optimally matched to the respective work steps, so that you can work efficiently. We have developed our own system for an efficient orthopaedic workshop based on the principles of lean manufacturing and are already using it successfully in practice.

## **Ottobock work.hub**

**Ottobock work.hub** is an innovation that brings digitalisation and cross-linking into your orthopaedic workshop. The machines are connected via a cloud. Via the cloud, you can access information about the machines at any time, regardless of location. This feature helps you organise your workshop to create a highly efficient and profitable working environment.
