

QUALITY FOR LIFE

Lisa – Rehab folding buggy for children

- For easy and uncomplicated transportation of kids, both big and small
- Easy to handle and transport
- Long period of use thanks to Lisa's ability to "grow with the child"

En Route with Lisa.

Lisa is a compact folding buggy with particularly high stability and a load capacity of up to 60 kg. This allows easy transportation even of heavier children and adolescents.

The adjustable seat depth and lower leg length as well as a high back make Lisa adaptable to different body heights and enable it to be used over a long period. A large range of accessories allow for individual adjustment of the buggy to different medical conditions and abilities of the user. The reinforced nylon upholstery promotes good upright posture. A back angle adjustment of 30° allows you to set the buggy in a reclining position.

Thanks to its small folding size, Lisa is very easy to transport. High-quality wheels with good rolling characteristics provide high maneuverability and easy pushing. Other practical details, such as wheel lock with central operation, tip-assist and integrated strap attachment points (anchor points) for transportation of the user in a motor vehicle for the disabled, make the buggy easy to use in everyday situations.
