Summary

Fennia Group summary

Fennia Group's Solvency and Financial Condition Report based on solvency regulation describes Fennia Group's, Fennia Mutual Insurance Company's and Fennia Life Insurance Company Ltd's 2025 business operations, profitability, system of governance, risk profile, valuation for solvency purposes and capital management. In addition to this joint report on Fennia Group, a separate solvency and financial condition report will be published for one of its member companies, Fennia Life Insurance Ltd.

*Fennia Managing Director
Hanna Hartikainen*

Business and performance

Fennia Group comprises the following companies: Fennia Mutual Insurance Company (Fennia), specialised in non-life insurance; Fennia Life Insurance Company Ltd (Fennia Life), which offers voluntary life, pension and savings insurance; Fennia Life Insurance Ltd (Fennia Life Insurance); Fennia-service Ltd (Fennia-service), which offers ancillary services closely linked to non-life insurance; and eFennia Ltd (eFennia), which maintains and develops non-life insurance IT systems, as well as Pasilan Portit Ky and Fabian 8 Ky, which provide rental and property management services. In addition, the group includes 9 real estate companies, and 15 related undertakings and two management companies are combined in the solvency calculation.

Fennia Life Insurance (formerly Sb Life Insurance Ltd) became part of Fennia Group on 29 August 2025 through a corporate acquisition in which Fennia Life acquired the entire share capital of the company.

In the 2025 reporting period, Fennia Group's result according to the consolidated financial statements before appropriations and taxes was EUR -39.8 million (EUR 31.5 million). The operating profit before the change in equalisation provision and bonuses and rebates was EUR -33.7 million (EUR 27.3 million). Non-life insurance business accounted for EUR -59.7 million (EUR 7.7 million), and life insurance business for EUR 19.9 million (EUR 23.8 million) of the result. Of the operating profit, the share of non-life insurance business was EUR -57.8 million (EUR 1.5 million), and the share of life insurance business was EUR 24.1 million (EUR 25.9 million).

Fennia Group's investment operations follow an asset-liability management (ALM) investment model, which has the objective of a steady development of solvency and effective and controlled risk-taking in relation to the companies' solvency position. The result indicator is a market-consistent equity return, which describes the change in Fennia Group's ability to meet its liabilities. Fennia Group's market-consistent return on equity in 2025 was EUR 89.2 million (EUR 65.9 million), consisting of a EUR 22.9 million hedging result (EUR -12.7 million), a EUR 65.0 million portfolio result (EUR 76.9 million), and a strategic portfolio result and expenses with a total impact of EUR 1.3 million (EUR 1.7 million).

System of governance

The Board of Directors of Fennia acts as the Board of the Group's ultimate parent company and is responsible for the Group having an appropriate governance system, ensuring that the governance system complies with

regulatory requirements and that the Group is managed as a whole. In addition, the Board of Directors of Fennia Group's ultimate parent company monitors that risk management, internal control and reporting have been appropriately arranged in the Group companies.

As the Board of Directors of Fennia Group's ultimate parent company, the Fennia Board has confirmed Fennia Group's policies, which the boards of directors of the Fennia Group companies have approved for use in the individual companies. Fennia Group's policies include matters such as policies regarding the eligibility requirements of the companies' management and persons responsible for key functions, internal control, risk management, internal audit and arrangements related to the outsourcing of functions.

As the Board of the ultimate parent company of Fennia Group, Fennia's Board of Directors confirms the remuneration principles and Group-level remuneration schemes for Fennia Group. The starting point for remuneration in Fennia Group is to provide motivating, fair and reasonable remuneration to management and personnel, in line with the short- and long-term interests of Fennia Group and the Group companies.

As the Board of the ultimate parent company of Fennia Group, Fennia's Board of Directors confirms Fennia Group's principles for assessing fitness and propriety, through the application of which the Group and its companies ensure that especially the persons responsible for management, key functions and critical and important tasks of Fennia Group and its companies, but also all other personnel, are fit and proper for their duties.

In Fennia Group, risk management means coordinated strategies, processes, principles and measures to identify, assess, measure, monitor and manage risks faced by the Group and the Group companies and to raise and report them. Solvency management is used to determine and steer Fennia Group's and the Group companies' risk-bearing capacity, risk appetite and the limiting of key risks.

The steering model for Fennia Group's and the Group companies' risk management system is based on three lines of defence, each with its own tasks. In the three-defence-line model, responsibility for risk and solvency management is allocated between the various operators.

Fennia Group's risk management function, organised within Fennia, produces the risk management services for all Fennia Group companies that have a licence to engage in insurance operations. A central aim of the function is to generate perspectives, analyses and assessments of the possible financial impacts of individual risks and combinations thereof in the short and long term as part of business planning and strategy implementation.

Fennia Group's Own Risk and Solvency Assessment (ORSA) is a tool for the boards of directors, managing directors and other senior management of Fennia Group and its companies to support their capital management and operations. Own Risk and Solvency Assessment is part of the continuous risk management process, and as the outcome of the process, an extensive summary of the key future estimates and risks is produced at least once a year. The ORSA report includes an overall picture of the current situation and a future outlook in terms of the business operations, strategic decisions and policies, risks and solvency.

The goal of internal control at Fennia Group is to ensure the appropriateness, efficiency and productivity of the operations, the reliability of the financial data and reporting, and compliance with the regulations. As the Board of Directors of Fennia Group's ultimate parent company, Fennia's Board of Directors is responsible for the functioning of internal control in the companies belonging to Fennia Group.

Fennia Group's Group-level compliance function, which monitors compliance with the Group's regulations, is organised in the parent company Fennia. The function is responsible for ensuring that Fennia Group's operations comply with regulations, financial sector self-regulation, the Group's internal guidelines, and that customer relationships are managed according to the appropriate procedures.

Fennia Group's internal audit is a function organised within Fennia that is independent of the businesses and supports Fennia Group and its senior management in the execution of Fennia Group's strategy and meeting targets by offering a systematic approach to the assessment and development of the organisation's risk management, control, management and administrative processes.

In Fennia Group, actuarial functions are organised within each company, and the responsible actuaries in each company are accountable for the actuarial function of their insurance company. The responsible actuaries are also in charge of ensuring the actuarial methods applied in pricing and in calculating technical provisions are appropriate. They also set the level of the technical provisions.

Outsourcing means concluding a contract with an outside service provider with the purpose of performing a process, service or task that belongs to the company's business sector, and which the company would otherwise perform itself. Fennia Group ensures that outsourcing at Fennia Group companies is arranged so that the risks related to outsourcing are controlled, the operations continue uninterrupted, and the regulatory requirements related to outsourcing are met.

Risk profile

In a market-consistent valuation environment, risk-taking capacity is illustrated by the difference between balance sheet assets and liabilities, in which the eligibility of balance sheet items, i.e. the market-consistent amount of eligible own funds, is taken into account. The more of its own funds the Group has, the greater its risk-bearing capacity, and the more freedom it has to decide which risks it will bear in its operations. From a quantitative perspective, risk-taking is illustrated by the solvency capital requirement of the operations. An understanding of the Group's risk profile is gained by analysing the eligible amount of its own funds, the solvency capital requirement and the relationship between the two.

Fennia Group's solvency capital requirement excluding the loss-absorbing effect of future bonuses and deferred taxes, i.e. before loss-absorbing items, was EUR 628.8 million at the close of the reporting period (EUR 550.6 million). Of that amount, the share of the market capital requirement was EUR 460.2 million (EUR 418.3 million), the counterparty risk was EUR 66.7 million (EUR 45.6 million), the underwriting risk was EUR 175.5 million (150.6 million), the operational risk was EUR 23.9 million (EUR 18.0 million), and the capital requirement of Group's other companies was EUR 34.3 million (EUR 25.2 million). After loss-absorbing items, the solvency capital requirement amounted to EUR 571.5 million (EUR 499.5 million). With its eligible own funds of EUR 994.4 million (EUR 1,005.0 million), the Group's relative solvency position was 174.0 per cent (201.2%).

Underwriting risk is linked to the basic business, i.e. insurance, and is divided into three main classes, which are premium risk, technical provisions risk and major loss risk. Life insurance risks can be divided into biometric risks, behaviour risks, expense risks and major loss risks. Insurance operations are based on assuming insurance risks, diversifying risks within the insurance portfolio and managing insurance risks. The most important instruments for underwriting risk management are an appropriate risk selection, pricing, insurance terms and conditions, and the acquisition of reinsurance cover. The pricing of insurance risks aims to achieve risk matching.

Taking diversification benefits into account, the underwriting risk's contribution to Fennia Group's solvency capital requirement was EUR 104.1 million (EUR 87.8 million), which is 16.6 per cent (15.9%) of the solvency capital requirement before loss-absorbing items.

The market risks that affect Fennia Group, i.e. those that affect the Group's financial position due to impacts resulting from changes in the market values of assets and liabilities, are interest rate, spread, equity, property, currency and concentration risks. It is essential to examine market risks from the perspective of the entire balance sheet. In solvency calculation, both sides of the balance sheet are valued at market conditions, so changes in risk factors affect both assets and liabilities at the same time.

Changes in market risk factors also affect solvency in two ways: through a change in both the company's eligible own funds and in the solvency capital requirement. As market risks are realised, the company's eligible own funds shrink, which weakens the solvency position. Changes in assets and liabilities most often also affect the solvency capital requirement.

Fennia Group's general risk-taking capacity, risk appetite and business targets guide investment operations and create preconditions for them. In investment operations and market risk management, the objective is to attain the set business targets without endangering the solvency targets. The cornerstones of market risk management are sufficient diversification of investments, the precautionary principle and risk mitigation techniques. Exposures to market risks and their effects are measured by asset class allocation, sensitivity analysis and the solvency capital requirement caused by each market risk.

Taking diversification benefits into account, Fennia Group's market risks' contribution to the solvency capital requirement was EUR 435.2 million (EUR 399.2 million), which is 69.2 per cent (72.5%) of the entire solvency capital requirement before loss-absorbing items. The contribution of the equity risk to the market risks' solvency capital requirement was largest, at 67.9 per cent (62.6%).

Credit risk, i.e. counterparty risk, is the risk that the other party to the agreement is unable to meet their obligations. In Fennia Group's solvency calculations, the counterparty risk mostly resulted from reinsurance contracts, cash assets, derivative contract counterparties, off-balance-sheet commitments and receivables from insurance customers. As with market risks, a prerequisite for managing counterparty risks is to ensure that the counterparties and related risks can be identified and measured, and that they can be managed, monitored and reported.

The contribution of Fennia Group's counterparty credit risk to the total solvency capital requirement before loss-absorbing items was EUR 31.2 million (EUR 20.4 million). The counterparty risk's share of the solvency capital requirement before loss-absorbing items was 5.0 per cent (3.7%).

Liquidity risk arises from the possibility of the company being unable to meet its payment obligations on time. Liquidity risk does not cause a capital requirement in the solvency calculation according to the standard formula, but it can be of great importance, especially in adverse market situations. The management of liquidity risk therefore requires close scrutiny to ensure that the risks do not materialise.

Operational risks at Fennia Group refer to risks arising from internal processes, personnel, systems and external factors. Fennia Group's operational risk management process covers the identification, evaluation, management, monitoring and reporting of risks. Compliance risks and data protection risks are part of operational risks.

The solvency capital requirement for Fennia Group's operational risks and the contribution to the total solvency capital requirement before loss-absorbing items was EUR 23.9 million (EUR 18.0 million). Its share of the solvency capital requirement before loss-absorbing items was 3.8 per cent (3.3%).

Fennia Group is also exposed to other risks that are not taken into account in solvency capital requirement calculations. By their nature, they are usually difficult to measure. These risks include risks linked to the strategy, its implementation and business environment, risk linked to acquiring additional capital, reputation risk, group risks, sustainability risks such as direct and indirect risks caused by climate change, as well as entirely new types of risk that are difficult to identify or assess in advance.

Valuation for solvency purposes

The valuation principles of the solvency calculation are based on the IFRS standard and solvency regulation. The objective is to determine fair value in accordance with the market consistent valuation principle. The most significant differences between the equity in accordance with the financial statements

and the own funds in accordance with the solvency calculation stem from the valuation difference of investment assets, the valuation of technical provisions and the treatment of the equalisation provision.

Fennia Group's investments in the solvency calculation balance sheet at the close of the reporting period were EUR 2,271.9 million (EUR 2,309.8 million), and in the closing balance sheet, EUR 2,057.4 million (EUR 2,095.6 million).

Fennia Group's technical provisions consist of the combined technical provisions of Fennia, Fennia Life and Fennia Life Insurance. At the close of the reporting period, technical provisions under solvency calculation were a total of EUR 5,509.2 million (EUR 4,047.4 million), and the technical provisions according to the financial statements totalled EUR 6,042.6 million (EUR 4,603.8 million).

In determining Fennia Group's technical provisions, matching adjustment, volatility adjustment and transitional measures were not used.

Capital management

The goal of managing the Group's own funds is to ensure the sufficiency of its own funds to cover the regulatory solvency capital requirement and a sufficiently large surplus at all times, and to allocate capital to key risk areas efficiently in terms of the risk-return ratio. The required minimum level of its own funds is the minimum level with which the Group can, with high probability, meet its obligations concerning the benefits of the insured.

For unexpected stress factors, Fennia Group defines the amount of the capital buffer in addition to the required minimum amount of its own funds. The capital buffer creates time after sudden and unexpected situations are realised to deliberately adjust the risk position to a level corresponding to the new situation. The target level of solvency is formed by the company's own view of the overall solvency need and the internally defined capital buffer. The management of the Group's own funds and solvency is part of the risk management system.

Fennia Group's available own funds amounted to EUR 994.4 million (EUR 1,005.0 million) at the end of the reporting period, and they belonged in their entirety to class 1, which can be used without limitation and as they stand to cover the solvency capital requirement. Fennia Group does not apply the transitional measures enabled by the regulation to its own funds.

Fennia Group's solvency capital requirement at the end of the reporting period was EUR 571.5 million (EUR 499.5 million), and the minimum consolidated group solvency capital requirement was EUR 163.3 million (EUR 143.7 million). The ratio of the Group's eligible own funds to the minimum consolidated group solvency capital requirement was 608.8 per cent (699.2%). The Group did not fall below its required regulatory level of the solvency capital requirement or minimum consolidated group solvency capital requirement during the reporting period.

Fennia summary

Fennia Group's Solvency and Financial Condition Report based on solvency regulation includes information concerning Fennia's 2025 business operations, profitability, system of governance, risk profile, valuation for solvency purposes and capital management.

Business and performance

Fennia is an expert of insurance and related services, offering companies, entrepreneurs and households the insurance services they need. Fennia's line of business includes statutory and voluntary non-life insurance and reinsurance. Fennia's shareholders consist of its policyholders. Fennia engages in direct insurance business primarily in Finland.

Fennia's premiums written totalled EUR 465.3 million (EUR 435.6 million) during the reporting period. The combined ratio was 121.5 per cent (111.3%), with claims, i.e. risk ratio, accounting for 72.1 per cent (65.5%), and operating expenses and claims handling expenses, i.e. the operating expense ratio, for 49.4 per cent (45.8%). The adjusted combined ratio, with the changes in the calculation principles and the non-recurring items entered as operating costs eliminated, was 128.0 per cent (126.4%).

In investment management, Fennia follows the group-level asset-liability management strategy, in which the investment assets have been separated into an ALM portfolio covering long-term technical provisions and an investment portfolio. The objective of the ALM portfolio is to generate the cash flows from long-term technical provisions with a low market risk.

Fennia's market-based return on equity in 2025 was EUR 103.7 million (EUR 98.3 million). Return on investment at fair value was EUR 57.1 million (EUR 127.8 million).

Fennia's market-consistent return on equity in 2025 was EUR 103.7 million (EUR 98.3 million), consisting of a EUR 19.3 million hedging result (EUR -12.9 million), a EUR 59.4 million investment portfolio result (EUR 74.0 million), and other investments and expenses with an impact of EUR 25.0 million (EUR 37.2 million).

System of governance

In accordance with Fennia's legal form of a mutual company, the highest decision-making power at Fennia is exercised at the general meeting of shareholders by the policyholders, i.e. Fennia's clients. The company's governing bodies are the Supervisory Board, the Board of Directors and the Managing Director.

The Supervisory Board supervises the administration of the company, which is the responsibility of the Board of Directors and the Managing Director. Fennia's Board of Directors tends to the administration of the company and the appropriate organisation of its operations. The operations of Fennia are managed by a Managing Director, who is appointed by the company's Board of Directors, and whose terms and conditions of employment, salary and bonuses are determined by the Board of Directors.

Fennia's Board of Directors has approved Fennia Group's remuneration principles and remuneration schemes to be followed in the company. The starting point for remuneration is to provide motivating, fair and reasonable remuneration to management and personnel, in line with Fennia's short- and long-term interests.

Fennia's Board of Directors has approved Fennia Group's principles for assessing fitness and propriety to be followed by the companies. By following the procedures in accordance with these principles, it is ensured that the persons responsible for Fennia's management, key functions and critical and important tasks, as well as all other personnel, are suitable and reliable for their tasks.

At Fennia, risk management refers to coordinated strategies, processes, principles and measures to identify, assess, measure, monitor and manage risks faced by the company, as well as to report them. Solvency management is used to determine and steer Fennia's risk-bearing capacity, risk appetite and the limiting of key risks.

The steering model for Fennia's risk management system is based on three lines of defence, each with its own tasks. In the three-defence-line model, responsibility for risk and solvency management is allocated between the various operators.

Fennia Group's risk management function, organised within Fennia, provides risk management services to both Fennia and other Fennia Group companies. A key aim of the function is to generate perspectives, analyses and assessments of the possible financial impacts of individual risks and combinations thereof in the short and long term as part of business planning and strategy implementation.

The Own Risk and Solvency Assessment (ORSA) is a tool for Fennia's Board of Directors, Managing Director and other executive management to support capital management, business planning and product development. Own Risk and Solvency Assessment is part of the continuous risk management process, and as the outcome of the process, an extensive summary of the key future estimates and risks is produced at least once a year. The ORSA report includes an overall picture of the current situation and a future outlook in terms of the business operations, strategic decisions and policies, risks and solvency.

The goal of internal control at Fennia is to ensure the appropriateness, efficiency and productivity of the company's operations, the reliability of the financial data and reporting, and compliance with the regulations. Fennia's Board of Directors has overall responsibility for the functioning of internal control in the company. The executive management ensures that internal control is organised in practice.

The compliance function, which monitors compliance with Fennia Group's regulations, is organised within Fennia and provides compliance services to Fennia and to other companies in Fennia Group. The function is responsible for ensuring that Fennia's operations comply with regulations, financial sector self-regulation, the Group's internal guidelines, and that customer relationships are managed according to the appropriate procedures.

Internal audit is a function that is independent of the businesses and supports Fennia and its senior management in the execution of the strategy and the meeting of targets by offering a systematic approach to the assessment and development of the organisation's risk management, control, management and administrative processes.

Fennia's responsible actuary is in charge of the company's actuarial function and sees to it that the actuarial methods applied in pricing and in calculating technical provisions are appropriate, and sets the level of the technical provisions.

Outsourcing means concluding a contract with an outside service provider with the purpose of performing a process, service or task that belongs to the company's business sector, and which the company would otherwise perform itself. Fennia complies with Fennia Group's principles regarding outsourcing and ensures that outsourcing is arranged so that the risks related to outsourcing are controlled, the operations continue uninterrupted, and the regulatory requirements related to outsourcing are met.

Risk profile

In a market-consistent valuation environment, risk-taking capacity is illustrated by the difference between balance sheet assets and liabilities, in which the eligibility of balance sheet items, i.e. the market-consistent amount of the Group's eligible own funds, is taken into account. The more of its own funds the company has, the greater its risk-bearing capacity, and the more freedom it has to decide which risks it will bear in its operations. From a quantitative perspective, risk-taking is illustrated by the solvency capital requirement of the operations. An understanding of the company's risk profile is gained by analysing the eligible amount of its own funds, the solvency capital requirement and the relationship between the two.

Fennia's solvency capital requirement before loss-absorbing items was EUR 511.4 million (EUR 480.8 million) at the close of the reporting period. Of that amount, the market risk share was EUR 421.5 million (EUR 402.2 million), the counterparty risk was EUR 58.4 million (EUR 34.7 million), the underwriting risk was EUR 120.4 million (EUR 118.8 million), and the operational risk was EUR 14.2 million (EUR 13.3 million). After loss-absorbing items, the solvency capital requirement amounted to EUR 464.9 million (EUR 435.1 million). With its eligible own funds of EUR 956.2 million (EUR 974.6 million), the company's relative solvency position was 205.7 per cent (224.0%).

Underwriting risk is linked to the basic business, i.e. insurance, and is divided into three main classes, which are premium risk, technical provisions risk and major loss risk. Life insurance risks can be divided into biometric risks, behaviour risks, expense risks and major loss risks. Insurance operations are based on assuming insurance risks, diversifying risks within the insurance portfolio and managing insurance risks. The most important instruments for underwriting risk management are an appropriate risk selection, pricing, insurance terms and conditions, and the acquisition of reinsurance cover. The pricing of insurance risks aims to achieve risk matching.

Taking diversification benefits into account, the underwriting risk's contribution to Fennia's solvency capital requirement was EUR 66.5 million (EUR 64.7 million), which is 13.0 per cent (13.5%) of the solvency capital requirement before loss-absorbing items.

The market risks that affect Fennia, i.e. those that cause impacts on the Group's financial position due to impacts resulting from changes in the market values of assets and liabilities, include interest rate, spread, equity, property, currency and concentration risks. It is essential to examine market risks from the perspective of the entire balance sheet. In solvency calculation, both sides of the balance sheet are valued at market conditions, so changes in risk factors affect both assets and liabilities at the same time.

Changes in market risk factors also affect solvency in two ways: through a change in both the company's eligible own funds and in the solvency capital requirement. As market risks are realised, the company's eligible own funds shrink, which weakens the solvency position. Changes in assets and liabilities most often also affect the solvency capital requirement.

Fennia's general risk-taking capacity, risk appetite and business targets guide investment operations and create preconditions for them. In investment operations and market risk management, the objective is to attain the set business targets without endangering the solvency targets. The cornerstones of market risk management are sufficient diversification of investments, the precautionary principle and risk mitigation techniques. Exposures to market risks and their effects are measured by asset class allocation, sensitivity analysis and the solvency capital requirement caused by each market risk.

Taking diversification benefits into account, the market risks' contribution to Fennia's solvency capital requirement was EUR 404.0 million (EUR 388.2 million), which is 79.0 per cent (80.7%) of the entire solvency capital requirement before loss-absorbing items. The contribution of the equity risk to the market risks' solvency capital requirement was largest, at 73.5 per cent (70.7%).

Credit risk, i.e. counterparty risk, is the risk that the other party to the agreement is unable to meet their obligations. In Fennia's solvency calculations, the counterparty risk mostly resulted from reinsurance contracts, cash assets, derivative contract counterparties, off-balance-sheet commitments and receivables from insurance customers. As with market risks, a prerequisite for managing counterparty risks is to ensure that the counterparties and related risks can be identified and measured, and that they can be managed, monitored and reported.

The contribution of Fennia's counterparty risk to the total solvency capital requirement before loss-absorbing items was EUR 26.6 million (EUR 14.6 million). The counterparty risk's share of the solvency capital requirement before loss-absorbing items was 5.2 per cent (3.0%).

Liquidity risk arises from the possibility of the company being unable to meet its payment obligations on time. Liquidity risk does not cause a capital requirement in the solvency calculation according to the standard formula, but it can be of great importance, especially in adverse market situations. The management of liquidity risk therefore requires close scrutiny to ensure that the risks do not materialise.

Operational risks at Fennia Group refer to risks arising from internal processes, personnel, systems and external factors. Fennia Group's operational risk management process covers the identification, evaluation, management, monitoring and reporting of risks. Compliance risks and data protection risks are part of operational risks.

The solvency capital requirement for Fennia's operational risk and the contribution to the total solvency capital requirement before loss-absorbing items was EUR 14.2 million (EUR 13.3 million). Its share of the solvency capital requirement before loss-absorbing items was 2.8 per cent (2.8%).

Fennia is also subject to other risks that are not taken into account in solvency capital requirement calculations. By their nature, they are usually difficult to measure. These risks include risks linked to the strategy, its implementation and business environment, risk linked to acquiring additional capital, reputation risk, group risks, sustainability risks such as direct and indirect risks caused by climate change, as well as entirely new types of risk that are difficult to identify or assess in advance.

Valuation for solvency purposes

The valuation principles of the solvency calculation are based on the IFRS standard and solvency regulation. The objective is to determine fair value in accordance with the market consistent valuation principle. The most significant differences between the equity in accordance with the financial statements and the own funds in accordance with the solvency calculation stem from the valuation difference of investment assets, the valuation of technical provisions and the treatment of the equalisation provision.

Fennia's investments in the solvency calculation balance sheet at the close of the reporting period were EUR 1,874.5 million (EUR 1,952.3 million), and in the closing balance sheet EUR 1,490.7 million (EUR 1,603.7 million).

In calculating solvency, the best estimate of the technical provisions calculated from insurance contracts is the expected current value of future cash flows related to the current insurance portfolio. Future cash flows from insurance contracts will be discounted using the zero-coupon swap curve established by the European Insurance and Occupational Pensions Authority (EIOPA). The technical provisions are the sum of the best estimate (expected level) and the risk margin (safety margin).

At the close of the reporting period, the technical provisions according to the solvency calculation amounted to EUR 788.7 million (EUR 870.6 million), of which the share of the best estimate was EUR 759.3 million (EUR 834.7 million), and the risk margin amounted to EUR 29.5 million (EUR 35.9 million). The technical provisions in accordance with the financial statements amounted to EUR 1,178.3 million (EUR 1,315.3 million).

In determining Fennia's technical provisions, matching adjustment, volatility adjustment and transitional measures were not used.

Capital management

The goal of managing the Group's own funds is to ensure the sufficiency of its own funds to cover the regulatory solvency capital requirement and a sufficiently large surplus at all times, and to allocate capital to key risk areas efficiently in terms of the risk-return ratio. The required minimum level of own funds is the

minimum level with which the company can, with great probability, meet its obligations concerning the benefits of the insured.

For unexpected stress factors, Fennia defines the amount of the capital buffer in addition to the required minimum amount of its own funds. The capital buffer creates time after sudden and unexpected situations are realised to deliberately adjust the risk position to a level corresponding to the new situation. The target level of solvency is formed by the company's own view of the overall solvency need and the internally defined capital buffer. The management of the Group's own funds and solvency is part of the risk management system.

Fennia's available own funds amounted to EUR 956.2 million (EUR 974.6 million) at the end of the reporting period, and they belonged in their entirety to class 1, which can be used without limitation and as they stand to cover the solvency capital requirement. The company does not apply the transitional measures enabled by the regulation to its own funds.

Fennia's solvency capital requirement at the end of the reporting period was EUR 464.9 million (EUR 435.1 million), and the minimum capital requirement was EUR 116.2 million (EUR 108.8 million). The ratio of the company's eligible own funds to the minimum capital requirement was 822.7 per cent (896.0%). The company did not fall below its required regulatory level of the solvency capital requirement or minimum capital requirement during the reporting period.

Fennia Life summary

Fennia Group's Solvency and Financial Condition Report based on solvency regulation includes information concerning Fennia Life's 2025 business operations, profitability, system of governance, risk profile, valuation for solvency purposes and capital management.

Business and performance

Fennia Life is a life insurance company owned by Fennia. Fennia Life specialises in voluntary life, pension and savings insurance. The company offers its customers insurance cover for permanent disability, serious illness and death, voluntary individual and group pension insurance, savings life insurance, capital redemption contracts, as well as loan protection insurance through its partner. Fennia Life engages in insurance business only in Finland.

Fennia Life acquired the entire share capital of Fennia Life Insurance Ltd (formerly Sb Life Insurance Ltd) by way of a corporate acquisition completed on 29 August 2025, which then became a wholly owned subsidiary of Fennia Life.

Fennia Life's premiums written totalled EUR 373.5 million (EUR 306.5 million) in the reporting period. Unit-linked insurance premiums accounted for 90.6 per cent (90.8%) of the total premiums written. The growth in premiums written has mostly come from savings-type insurance, but premiums written from life insurance policies have also increased. The risk result for life insurance amounted to EUR 6.6 million (EUR 9.5 million). Life insurance operating expenses (including claims settlement expenses) amounted to EUR 24.5 million (EUR 20.3 million). The expense ratio of expense loading (including provision rebates from funds covering unit-linked contracts) was 72.1 per cent (82.0%). Excluding the impact of the provision rebates, the expense ratio was 85.5 per cent (93.3%). Fennia Life paid client bonuses on risk life insurance contracts and on savings-type insurance contracts with a low technical rate of interest. Customer bonuses paid amounted to EUR 2.7 million (EUR 2.3 million).

In investment management, Fennia Life follows the group-level asset-liability management strategy, in which part of the investment assets have been separated into an ALM portfolio covering long-term

technical provisions, as well as an investment portfolio free of the technical provision return requirement. The objective of the ALM portfolio is to generate the cash flows from long-term technical provisions with a low market risk.

The market-consistent return on equity of Fennia Life in 2025 was EUR 8.1 million (EUR 2.1 million), which consisted of the hedging result of the ALM portfolio of EUR 3.6 million (EUR 0.2 million), the result of the investment portfolio of EUR 5.6 million (EUR 2.9 million) and other investments and expenses with a total impact of EUR -1.0 million (EUR -1.0 million).

System of governance

At Fennia Life, the supreme decision-making power is exercised by the sole shareholder Fennia through the Annual General Meeting. Fennia Life's governing bodies are the Board of Directors and the Managing Director.

Fennia Life's Board of Directors tends to the administration of the company and the appropriate organisation of its operations. The operations of Fennia Life are managed by a Managing Director, who is appointed by the company's Board of Directors, and whose terms and conditions of employment, salary and bonuses are determined by the Board of Directors.

Fennia Life's Board of Directors has approved Fennia Group's remuneration principles and remuneration schemes to be followed in the company. The starting point for remuneration is to provide motivating, fair and reasonable remuneration to management and personnel, in line with Fennia Group's and Fennia Life's short- and long-term interests.

Fennia Life's Board of Directors has approved Fennia Group's principles for assessing fitness and propriety to be followed by the companies. By following the procedures in accordance with these principles, it is ensured that the persons responsible for Fennia Life's management, key functions and critical and important tasks, as well as all other personnel, are suitable and reliable for their tasks.

At Fennia Life, risk management refers to coordinated strategies, processes, principles and measures to identify, assess, measure, monitor and manage risks faced by the company, as well as to report them. Solvency management is used to determine and steer Fennia Life's risk-bearing capacity, risk appetite and the limiting of key risks.

The steering model for Fennia Life's risk management system is based on three lines of defence, each with its own tasks. In the three-defence-line model, responsibility for risk and solvency management is allocated between the various operators.

Fennia Group's risk management function, organised within the parent company Fennia, provides risk management services to Fennia Life. A key aim of the function is to generate perspectives, analyses and assessments of the possible financial impacts of individual risks and combinations thereof in the short and long term as part of business planning and strategy implementation.

The Own Risk and Solvency Assessment (ORSA) is a tool for Fennia Life's Board of Directors, Managing Director and other executive management to support capital management, business planning and product development. Own Risk and Solvency Assessment is part of the continuous risk management process, and as the outcome of the process, an extensive summary of the key future estimates and risks is produced at least once a year. The ORSA report includes an overall picture of the current situation and a future outlook in terms of the business operations, strategic decisions and policies, risks and solvency.

The goal of internal control at Fennia Life is to ensure the appropriateness, efficiency and productivity of the company's operations, the reliability of the financial data and reporting, and compliance with the

regulations. Fennia Life's Board of Directors has overall responsibility for the functioning of internal control in the company. The executive management ensures that internal control is organised in practice.

The compliance function, which monitors compliance with Fennia Group's regulations, is organised within the parent company Fennia and provides compliance services to Fennia Life. Fennia Life's compliance function is responsible for ensuring that Fennia Life's operations comply with regulations, financial sector self-regulation, the Group's internal guidelines, and that customer relationships are managed according to the appropriate procedures.

Internal audit is a function that is independent of the businesses and supports Fennia Life and its senior management in the execution of the strategy and the meeting of targets by offering a systematic approach to the assessment and development of the organisation's risk management, control, management and administrative processes. Fennia Group's internal audit function, organised in the parent company Fennia, also provides internal audit services to Fennia Life.

Fennia Life's responsible actuary is in charge of the company's actuarial function and sees to it that the actuarial methods applied in pricing and in calculating technical provisions are appropriate, and sets the level of the technical provisions.

Outsourcing means concluding a contract with an outside service provider with the purpose of performing a process, service or task that belongs to the company's business sector, and which the company would otherwise perform itself. Fennia Life complies with Fennia Group's principles regarding outsourcing and ensures that outsourcing is arranged so that the risks related to outsourcing are controlled, the operations continue uninterrupted, and the regulatory requirements related to outsourcing are met.

Risk profile

In a market-consistent valuation environment, risk-taking capacity is illustrated by the difference between balance sheet assets and liabilities, in which the eligibility of balance sheet items, i.e. the market-consistent amount of the Group's eligible own funds, is taken into account. The more of its own funds the company has, the greater its risk-bearing capacity, and the more freedom it has to decide which risks it will bear in its operations. From a quantitative perspective, risk-taking is illustrated by the solvency capital requirement of the operations. An understanding of the company's risk profile is gained by analysing the eligible amount of its own funds, the solvency capital requirement and the relationship between the two.

Fennia Life's solvency capital requirement before loss-absorbing items was EUR 141.5 million (EUR 121.4 million) at the close of the reporting period. Of that amount, the market risk share was EUR 97.3 million (EUR 78.5 million), the counterparty risk was EUR 10.4 million (EUR 10.6 million), the underwriting risk was EUR 69.0 million (EUR 63.6 million), and the operational risk was EUR 5.3 million (EUR 4.9 million). After loss-absorbing items, the solvency capital requirement amounted to EUR 126.6 million (EUR 108.5 million). With its eligible own funds of EUR 246.1 million (EUR 219.2 million), the company's relative solvency position was 194.4 per cent (201.9%).

Underwriting risk is linked to the basic business, i.e. insurance. Life insurance risks can be divided into biometric risks, behaviour risks, expense risks and major loss risks. Insurance operations are based on assuming insurance risks, diversifying risks within the insurance portfolio and managing insurance risks. The most important instruments for underwriting risk management are an appropriate risk selection, pricing, insurance terms and conditions, and the acquisition of reinsurance cover. The pricing of insurance risks aims to achieve risk matching.

Taking diversification benefits into account, the underwriting risk's contribution to Fennia Life's solvency capital requirement was EUR 48.5 million (EUR 46.9 million), which is 33.4 per cent (38.7%) of the solvency capital requirement before loss-absorbing items.

The market risks that affect Fennia Life, i.e. those that cause impacts on the Group's financial position due to impacts resulting from changes in the market values of assets and liabilities, include interest rate, spread, equity, property, currency and concentration risks. It is essential to examine market risks from the perspective of the entire balance sheet. In solvency calculation, both sides of the balance sheet are valued at market conditions, so changes in risk factors affect both assets and liabilities at the same time.

Changes in market risk factors also affect solvency in two ways: through a change in both the company's eligible own funds and in the solvency capital requirement. As market risks are realised, the company's eligible own funds shrink, which weakens the solvency position. Changes in assets and liabilities most often also affect the solvency capital requirement.

Fennia Life's general risk-taking capacity, risk appetite and business targets guide investment operations and create preconditions for them. In investment operations and market risk management, the objective is to attain the set business targets without endangering the solvency targets. The cornerstones of market risk management are sufficient diversification of investments, the precautionary principle and risk mitigation techniques. Exposures to market risks and their effects are measured by asset class allocation, sensitivity analysis and the solvency capital requirement caused by each market risk.

Taking diversification benefits into account, the market risks' contribution to Fennia Life's solvency capital requirement was EUR 83.7 million (EUR 65.3 million), which is 59.2 per cent (53.8%) of the entire solvency capital requirement before loss-absorbing items. The contribution of the equity risk to the market risks' solvency capital requirement was largest, at 57.5 per cent (48.9%).

Credit risk, i.e. counterparty risk, is the risk that the other party to the agreement is unable to meet their obligations. In Fennia Life's solvency calculation, counterparty risk was mainly caused by reinsurance contracts, cash assets, counterparties to derivative contracts, off-balance sheet commitments and receivables from insurance customers. As with market risks, a prerequisite for managing counterparty risks is to ensure that the counterparties and related risks can be identified and measured, and that they can be managed, monitored and reported.

The contribution of Fennia Life's counterparty risk to the total Solvency capital requirement before loss-absorbing items was EUR 4.0 million (EUR 4.2 million). The counterparty risk's share of the solvency capital requirement before loss-absorbing items was 2.8 per cent (3.5%).

Liquidity risk arises from the possibility of the company being unable to meet its payment obligations on time. Liquidity risk does not cause a capital requirement in the solvency calculation according to the standard formula, but it can be of great importance, especially in adverse market situations. The management of liquidity risk therefore requires close scrutiny to ensure that the risks do not materialise.

Operational risks at Fennia Group refer to risks arising from internal processes, personnel, systems and external factors. Fennia Group's operational risk management process covers the identification, evaluation, management, monitoring and reporting of risks. Compliance risks and data protection risks are part of operational risks.

The solvency capital requirement for Fennia Life's operational risks and the contribution to the total solvency capital requirement before loss-absorbing items were EUR 5.3 million (EUR 4.9 million). Its share of the solvency capital requirement before loss-absorbing items was 3.7 per cent (4.0%).

Fennia Life is also subject to other risks that are not taken into account in solvency capital requirement calculations. By their nature, they are usually difficult to measure. These risks include risks linked to the strategy, its implementation and business environment, risk linked to acquiring additional capital, reputation risk, group risks, sustainability risks such as direct and indirect risks caused by climate change, as well as entirely new types of risk that are difficult to identify or assess in advance.

Valuation for solvency purposes

The valuation principles of the solvency calculation are based on the IFRS standard and solvency regulation. The objective is to determine fair value in accordance with the market consistent valuation principle. The most significant differences between the equity in accordance with the financial statements and the own funds in accordance with the solvency calculation stem from the valuation difference of investment assets and the valuation of technical provisions.

Fennia Life's investments in the solvency calculation balance sheet at the close of the reporting period totalled EUR 578.4 million (EUR 575.1 million) and in the closing balance sheet, EUR 553.9 million (EUR 553.8 million).

In calculating solvency, the best estimate of the technical provisions calculated from insurance contracts is the expected current value of future cash flows related to the current insurance portfolio. Future cash flows from insurance contracts will be discounted using the zero-coupon swap curve established by the European Insurance and Occupational Pensions Authority (EIOPA). The technical provisions are the sum of the best estimate (expected level) and the risk margin (safety margin).

At the close of the reporting period, Fennia Life's technical provisions in accordance with the solvency calculation amounted to EUR 3,492.4 million (EUR 3,176.8 million). Of that amount, the share of the best estimate was EUR 3,459.7 million (EUR 3,146.3 million), and the share of the risk margin was EUR 32.7 million (EUR 30.5 million). The share of unit-linked technical provisions amounted to EUR 3,127.2 million (EUR 2,779.9 million). The technical provisions in accordance with the financial statements amounted to EUR 3,622.5 million (EUR 3,294.7 million).

In determining Fennia Life's technical provisions, matching adjustment, volatility adjustment and transitional measures were not used.

Capital management

The goal of managing the Group's own funds is to ensure the sufficiency of its own funds to cover the regulatory solvency capital requirement and a sufficiently large surplus at all times, and to allocate capital to key risk areas efficiently in terms of the risk-return ratio. The required minimum level of own funds is the minimum level with which the company can, with great probability, meet its obligations concerning the benefits of the insured.

For unexpected stress factors, Fennia Life defines the amount of the capital buffer in addition to the required minimum amount of its own funds. The capital buffer creates time after sudden and unexpected situations are realised to deliberately adjust the risk position to a level corresponding to the new situation. The target level of solvency is formed by the company's own view of the overall solvency need and the internally defined capital buffer. The management of the Group's own funds and solvency is part of the risk management system.

Fennia Life's available own funds amounted to EUR 246.1 million (EUR 219.2 million) at the end of the reporting period, and they belonged in their entirety to class 1, which can be used without limitation and as they stand to cover the solvency capital requirement. The company does not apply the transitional measures enabled by the regulation to its own funds.

Fennia Life's solvency capital requirement at the end of the reporting period was EUR 126.6 million (EUR 108.5 million), and the minimum capital requirement was EUR 35.7 million (EUR 35.0 million). The ratio of the company's eligible own funds to the minimum capital requirement was 689.1 per cent (626.8%). The company did not fall below its required regulatory level of the solvency capital requirement or minimum capital requirement during the reporting period.

A. Business and performance

A.1 Business

A.1.1 Fennia Group's business

Fennia Group's structure is based on the structure set out in Fennia's consolidated financial statements. The Group's parent company is Fennia Mutual Insurance Company, a Finnish non-life insurance company established in 1882 and owned by its customers.

Fennia Group consists of the following companies: the parent company of the Group, Fennia Mutual Insurance Company, specialising in non-life insurance; Fennia Life Insurance Company Ltd, which offers voluntary life, pension and savings insurance; and its wholly owned subsidiary, Fennia Life Insurance Ltd. Fennia Group also includes 9 real estate companies. In addition, Fennia Group includes Fennia-service Ltd, which produces ancillary services closely related to non-life insurance, eFennia Oy, which maintains and develops non-life and life insurance information systems, as well as Pasilan Portit Ky and Fabian 8 Ky, which offer property rental and management services. Fennia's solvency calculation also includes 15 related undertakings and two management companies.

Of Fennia Group companies, the Group's ultimate parent company Fennia operates on a mutual basis, which means the customers are the owners of the company. Of the other companies in the group, Fennia-service Ltd, eFennia, Fennia Life and Fennia Life Insurance Ltd are limited liability companies. The other companies included in Fennia Group's consolidated financial statements are real estate companies. The related companies are mainly UCITS companies.

Fennia Group has an extensive partner network with which it cooperates closely to benefit customers.

Fennia Group companies are domiciled in Helsinki. The Group's activities are supervised by the Finnish Financial Supervisory Authority, Snellmaninkatu 6, P.O. Box 103, FI-00101 Helsinki.

The audit is the responsibility of the audit firm KPMG Oy Ab, Töölönlahdenkatu 3, P.O. Box 1037, FI-00101 Helsinki. Petri Kettunen was the auditor with principal responsibility for Fennia and Fennia Life in 2025.

A.1.2 Fennia's business

Fennia is an expert of insurance and related services, offering companies, entrepreneurs and households the insurance services they need. Fennia's line of business includes statutory and voluntary non-life insurance and reinsurance.

Fennia's shareholders are its policyholders with valid insurance that started no later than the previous financial year. However, taking out reinsurance does not result in a shareholder relationship.

Fennia engages in direct insurance business primarily in Finland. In some respects, but to a very limited extent, Fennia insures customers' property abroad. Fennia also receives insurance objects that are located abroad through its inwards reinsurance activities. These objects are also mainly related to Finnish customers.

Fennia's subsidiary Fennia-service Ltd provides customers with ancillary services closely related to non-life insurance and risk management.

Fennia's partners in earnings-related pension insurance are Elo Mutual Pension Insurance Company and Veritas Pension Insurance Company.

A.1.3 Fennia Life's business

The insurance company Fennia Life was established in 1998. Fennia Life specialises in voluntary life, pension and savings insurance.

The company offers its customers insurance cover for permanent disability, serious illness and death, voluntary individual and group pension insurance, savings life insurance and capital redemption contracts, as well as loan protection insurance through its partners.

Fennia Life's customers are companies and other entities, entrepreneurs and private persons. Fennia Life engages in insurance business only in Finland.

On 29 August 2025, Fennia Life acquired the entire share capital of Sb Life Insurance Ltd. The company was renamed to Fennia Life Insurance Ltd on 8 December 2025.

A.2 Underwriting performance

A.2.1 Fennia Group's underwriting performance

Fennia Group's premiums written totalled EUR 924.5 million (EUR 754.0 million) during the reporting period.

The Group's result according to the consolidated financial statements before appropriations and taxes was EUR -39.8 million (EUR 31.5 million). The operating profit before the change in equalisation provision and bonuses and rebates was EUR -33.7 million (EUR 27.3 million). Non-life insurance business accounted for EUR -59.7 million (EUR 7.7 million), and life insurance business for EUR 19.9 million (EUR 23.8 million) of the result. Of the operating profit, the share of non-life insurance business was EUR -57.8 million (EUR 1.5 million), and the share of life insurance business was EUR 24.1 million (EUR 25.9 million).

The Group's average number of personnel was 1,231 (1,126).

The non-life insurance company's premiums written increased by 6.8 per cent. Claims expenses increased by 16.4% over the same period. The changes made to the accounting principles reduce the financial period's claims by a total of EUR 41.7 million (EUR 81.0 million). Without the changes in the calculation basis, the claims expenses increased by 4.0%. Premiums written in the life Insurance business increased by EUR 127.9 million. The increase is influenced in particular by the increase in capital redemption contracts. The increase is also influenced by Fennia Life Insurance's premiums written, which was EUR 61.3 million for the last four months. Claims paid increased by EUR 139.7 million.

A.2.2 Fennia's underwriting performance

Fennia's premiums written totalled EUR 465.3 million (EUR 435.6 million) during the reporting period. The combined ratio was 121.5 per cent (111.3%), with claims, i.e. risk ratio, accounting for 72.1 per cent (65.5%), and operating expenses and claims handling expenses, i.e. the operating expense ratio, for 49.4 per cent (45.8%).

The level of the discount rate applied in the calculation of the pension provisions of motor liability insurance as well as workers' compensation and occupational disease insurance was increased from 1.25 per cent to 1.75 per cent during the financial year. As a result, technical provisions decreased by a total of EUR 42.6 million. In addition, the company specified several items of collective liability, which, in aggregate, increased the technical provisions by EUR 2.9 million. In the comparison period, the company raised the discount rate for motor liability insurance and occupational accident and disease insurance from 1.0 per cent to 1.25 per cent, which decreased technical provisions by EUR 27.4 million. In addition, in the comparison period, the company specified the calculation of the collective liability for medical expenses insurance and the levels of claims management cost provisions for all insurance classes, which resulted in a decrease of technical provisions of EUR 51.7 million.

The adjusted combined ratio, with the changes in the calculation principles and the non-recurring items entered as operating costs eliminated, increased and was 128.0 per cent (126.4%).

The reinsurance volumes of domestic inwards reinsurance and foreign inwards reinsurance were low, and their impact on the result was minimal.

To protect the non-life insurance result, some outwards reinsurance contracts have been concluded. No significant losses affecting the outwards reinsurance result occurred during the financial year.

Premiums written for workers' compensation and occupational disease insurance amounted to EUR 83.9 million (EUR 77.5 million). The risk ratio was 42.1 per cent (76.5%), and the risk ratio without the changes in the bases for calculating the technical provisions was 70.7 per cent (95.8%). Premiums written on motor vehicle liability insurance totalled EUR 72.6 million (EUR 71.2 million). The risk ratio was 44.4 per cent (50.5%), and the risk ratio without the changes in the bases for calculating the technical provisions was 73.9 per cent (67.1%). The premiums written on voluntary motor vehicle insurance totalled EUR 101.6 million (EUR 95.0 million). The risk ratio was 93.3 per cent (95.5%), and the risk ratio without the changes in the bases for calculating the technical provisions was 89.6 per cent (94.5%). The premiums written on fire and other property insurance totalled EUR 81.9 million (EUR 81.4 million). The risk ratio was 67.8 per cent (61.2%), and the risk ratio without the changes in the bases for calculating the technical provisions was 67.8 per cent (62.8%).

The most significant non-life insurance classes, including the balance on the technical account, are shown in the table below.

Result per class of insurance group

Groups of insurance classes (EUR million)	Year	Gross premiums written before reinsurers' share	Gross premiums earned before reinsurers' share	Claims incurred before reinsurers' share	Operating expenses before reinsurers' commissions and profit participation	Reinsurance balance	Balance on technical account before the change in collective item and equalisation provision
Statutory accident insurance (workers' compensation)	2025	84.2	84.2	-47.3	-24.3	0.3	12.9
	2024	77.6	77.7	-70.5	-23.8	0.4	-16.2
Non-statutory accident and health	2025	74.8	69.1	-88.0	-30.0	-0.1	-49.0
	2024	61.6	58.2	-33.4	-18.5	-0.1	6.2
Motor liability	2025	75.6	73.1	-46.3	-28.7	4.6	2.6

Change in equalisation provision	2025						-1.9
	2024						6.2
BALANCE ON TECHNICAL ACCOUNT	2025						-101.5
	2024						-43.1

Excluding non-recurring items related to technical provisions, the balance of workers' compensation and occupational disease insurance was EUR -11.2 million (EUR -31.2 million), and that of motor vehicle liability insurance EUR -18.8 million (EUR -9.1 million).

Non-life insurance operating expenses (including claims settlement expenses) rose to EUR 229.9 million (EUR 199.6 million). The increase is affected by factors such as personnel additions related to strategic projects, increased sales fees and depreciations according to the plan related to the IT system project.

A.2.3 Fennia Life's underwriting performance

Fennia Life's premiums written totalled EUR 373.5 million (EUR 306.5 million) in the reporting period.

Premiums written were divided by insurance line as follows:

Written premiums (EUR million)	2025	2024
Savings insurance	129.8	174.1
Capital redemption policy	178.6	74.1
Individual pension insurance	7.5	6.8
Group pension insurance	30.0	26.9
Risk life insurance	21.6	18.9
Employees' group life insurance	6.0	5.6
Total	373.5	306.5

Reinsurers' share of total premiums written amounted to EUR 1.7 million (EUR 1.6 million).

Unit-linked insurance premiums accounted for 90.6 per cent (90.8%) of the total premiums written on life insurance. The growth in premiums written has mostly come from savings-type insurance. Premiums written from life insurance policies have also increased. Claims paid, including the costs of claims activities, amounted to EUR 258.1 million (EUR 145.7 million). The amount of claims paid, excluding the costs of the claims activities, was EUR 258.0 million (EUR 145.2 million), broken down as follows:

Claims paid (EUR million)	2025	2024
Repayment of benefits	3.8	4.6
Pension	51.9	43.7
Surrenders	158.1	75.0
Sum payable on death	38.6	17.9
Compensation for permanent incapacity	0.9	0.4
Other	4.7	3.7
Total	258.0	145.3

Reinsurers' share of claims paid amounted to EUR 0.6 million (EUR 0.1 million). As the portfolio of savings-type insurance has grown, the number of surrenders has also increased.

The risk result for life insurance amounted to EUR 6.6 million (EUR 9.5 million). The risk result consists mainly of the difference between the risk component included in risk life insurance (including employees' group life insurance) premiums and the risk life insurance claims paid based on death, permanent disability and serious illness.

Life insurance operating expenses (including claims settlement expenses) amounted to EUR 24.5 million (EUR 20.3 million). The expense ratio of expense loading (including provision rebates from funds covering

unit-linked contracts) was 72.1 per cent (82.0%). Excluding the impact of the provision rebates, the expense ratio was 85.5 per cent (93.3%).

The technical rate of interest on Fennia Life's insurance savings, which are linked to the interest rate result, is between 0 and 4.5 per cent. New policies with a technical rate of interest are no longer issued. The company has supplemented the technical provisions in previous financial statements by making transfers to the supplementary provision for the guaranteed interest rate. A minimum provision decrease plan has been drawn up for decreasing the supplementary provision for the guaranteed interest rate. In 2025, the supplementary provision for the guaranteed interest rate was decreased according to the plan. Due to the supplementary provisions that have been made, the minimum annual return requirement for investment operations in life insurance business is 1.0 per cent. The supplementary provision for the guaranteed interest rate in the financial statements amounted to EUR 56.3 million (EUR 63.3 million).

Fennia Life paid client bonuses on risk life insurance contracts and on savings-type insurance contracts with a low technical rate of interest. Customer bonuses paid amounted to EUR 2.7 million (EUR 2.3 million). In the long term, the total interest credited by Fennia Life has exceeded the return target.

A.3 Investment performance

A.3.1 Fennia Group's investment performance

Fennia Group's asset investments are guided by the Group's ALM investment model. Accordingly, the primary indicator for investment operations is a market-consistent equity return, which measures how Fennia Group's ability to meet its liabilities has changed over one year. The strategy's minimum target is achieved when the return on equity is positive. As such, the target return on technical provisions has been achieved and Fennia's ability to meet its liabilities has improved compared to the previous year.

At the end of 2025, Fennia Group consists of three insurance companies: Fennia, Fennia Life and Fennia Life Insurance, which was purchased by Fennia Life in 2025. The results for all three companies are included in the result presented below. In accordance with the asset-liability management strategy, the largest share of market risk is borne by the group's parent company, Fennia. The investment activities of Fennia Life and Fennia Life Insurance aim to bring a moderate and predictable return on equity, in addition to the company's business results, mainly through fixed-income investments.

Fennia Group's investment assets consist of three entities: ALM portfolio, investment portfolio and strategic portfolio. The combined investment assets of these three at fair value were EUR 2,251.7 million (EUR 2,314.2 million) at the end of 2025. The figures also take into account all the investment assets of Fennia Life Insurance for 2025.

Allocation of investment assets at market value (EUR million)	31.12.2025	Share	31.12.2024	Share
Fixed income investments	1,411.8	62.7%	1,490.3	64.4%
Equity investments	456.1	20.3%	462.1	20.0%
Real estate investments	383.9	17.0%	361.8	15.6%
Other investments	0.0	0.0%	0.0	0.0%
Total investments	2,251.7	100%	2,314.2	100%

The ALM portfolio's objective is to generate the cash flows promised to customers with a low market risk while hedging against the interest rate risk arising from the technical provisions to the capital and reserves. Interest rate risk is hedged by interest rate swaps, which convert the interest rate risk of the ALM portfolio investments so that it corresponds to technical provisions. The investments in the ALM portfolio are made

in short-term corporate bonds, government bonds and loans granted by customer financing which aim for a better return than the Euribor rate paid in interest rate swaps. The goal of the package is to achieve a positive hedging result and bring a moderate additional return on equity to the company in addition to covering the technical return requirement.

The part exceeding the value of the best estimate for the long-term technical provisions has been invested in the investment portfolio, the objective of which is to generate an absolute long-term return with a good risk-return ratio. The investment portfolio must also be able to cover short exposures under market stress and the group's capital requirement with a sufficient buffer, which defines the maximum risk-taking capacity of the investment portfolio. The assets of the investment portfolio are mainly invested in equity and fixed-income investments, as well as real estate investments and private equity funds. However, the importance of private equity funds in the investment portfolio has long been declining. The strategic portfolio contains the investments that also have another strategic goal besides return on investment.

Fennia Group's market-consistent return on equity in 2025 was EUR 89.2 million (EUR 65.9 million), consisting of a EUR 22.9 million hedging result (EUR -12.7 million), a EUR 65.0 million portfolio result (EUR 76.9 million), and a strategic portfolio result and expenses with a total impact of EUR 1.3 million (EUR 1.7 million).

Return on investment at fair value was EUR 32.1 million (EUR 108.2 million). The largest difference compared with the previous year was due to the returns on investments in the ALM portfolio (hedging activities). The investments in the ALM portfolio yielded EUR -34.2 million (EUR 29.6 million), excluding the impacts of technical provisions. As interest rates rose, the market value of derivatives hedging technical provisions fell sharply, but in the hedging portfolio, technical provisions and cash investments naturally compensated for the negative performance of the fixed-income instruments, resulting in 2025 being clearly better than the previous year for the hedging result. Fennia Life's returns have been eliminated from the Group's investment returns, as they are included in Fennia's investment result. Net investment income on invested capital was 1.4 per cent (4.7%).

Net income on invested capital from bearing of market risks (EUR million)	31.12.2025			31.12.2024		
	Net investment returns	Invested capital	Return, %	Net investment returns	Invested capital	Return, %
Hedging activities						
Hedging portfolio	-34.2	1,035.8	-3.3%	29.6	1,039.1	2.8%
Hedged provisions	44.9			-39.1		
Hedging margin	10.7			-9.5		
Non-hedged provisions	12.2			-3.2		
Result of hedging in total	22.9			-12.7		
Investment portfolio						
Equity investments	35.6	360.3	9.9%	63.2	370.6	17.0%
Fixed income investments	13.1	399.4	3.3%	23.1	446.6	5.2%
Real estate investments	16.6	313.5	5.3%	-16.1	350.9	-4.6%
Other investments	-0.3	39.4	-0.7%	6.8	43.2	15.7%
Investment portfolio in total	65.0	1,112.6	5.8%	76.9	1,211.3	6.4%
Strategic portfolio	10.7	106.4	10.0%	8.3	73.8	11.3%
Investments outside of revenue calculation	-1.2			0.3		
Income, costs and operating expenses not allocated to asset classes	-8.1			-7.0		
Return on own capital	89.2			65.9		

As long-term interest rates rise, changes in the value of technical provisions compensate for the negative change in the value of ALM derivatives. The hedging margin, which reflects the difference between the return on the ALM portfolio's investments and the change in the value of the hedged technical provisions was clearly positive, amounting to EUR 10.7 million (EUR -9.5 million). The positive hedging margin was particularly affected by the narrowing of government bond margins compared to swap rates. The portfolio of euro-area government bonds with the highest credit rating generated a hedge margin of approximately EUR 6 million (EUR -11 million). Positive hedging coverage was also obtained on a slightly smaller scale from corporate loans and customer financing loans. In addition, the result of hedged technical provisions includes a change in the present value of future additional benefits, which amounted to EUR -5.9 million (EUR 4.2 million). As interest rates and interest rate volatility rise, the likelihood of paying additional benefits grows, weakening Fennia Group's results.

In Fennia Group, the interest rate risk of over 40 years of technical provisions is strategically left unhedged, and as interest rates rose, this had a positive effect. The market-consistent return impact of the non-hedged technical provisions was EUR 12.2 million (EUR -3.2 million), which, with the hedging margin, led to a hedging result of EUR 22.9 million (EUR -12.7 million). In calculating return, technical provisions are valued based on the market yield curve without the Solvency II yield curve modifications.

The year 2025 was excellent for the investment portfolio. Its return was EUR 65 million (EUR 76.9 million), achieved evenly across all asset classes. Equity performed best, and their contribution to the return in euros was the highest, amounting to EUR 35.6 million (EUR 63.2 million). The return on fixed-income investments remained good at EUR 13.1 million, although the figure did not reach last year's returns (EUR 23.1 million). There was, however, a positive development in real estate investments, which also achieved a significant return of EUR 16.6 million (EUR -16.1 million) in 2025. Return on capital employed was 5.8% (6.4%).

The good return on equity investments was supported by bearing equity risk in the group's neutral allocation for almost the entire year. At the beginning of the year, the equity risk level was lower than usual, which benefited the relative return when the trade war escalated in April. The subsequent rapid rise, on the other hand, had a negative impact on relative returns, but the transition to neutral equity risk during the spring kept the overall impact moderate. Strategic hedging of risks related to equities also continued in 2025, negatively affecting returns on equity. Strategic hedging is carried out by buying put options, so the maximum loss on positions is always limited to the premiums paid. The returns on fixed-income investments continued to be good in 2025, although they decreased compared to the previous year.

The impact of other investments on the return of the investment portfolio was minor (EUR -0.3 million).

Strategic investments continued to have a positive impact on the Group's return on equity, and the return of EUR 10.7 million was even higher than in the previous year (EUR 8.3 million). The return consisted in its entirety of the return on shares in a listed strategic partner.

The return on investments outside the return calculation was EUR -1.2 million (EUR 0.3 million).

A.3.2 Fennia's investment performance

In investment management, Fennia follows the group-level asset-liability management strategy, in which the investment assets have been separated into an ALM portfolio covering long-term technical provisions and an investment portfolio. The objective of the ALM portfolio is to generate the cash flows from long-term technical provisions with a low market risk. Fennia's long-term technical provisions include the liability of statutory classes with long-term pension liabilities. Instead, the objective of the investment portfolio is to provide added value to the owners with an optimal risk-return ratio.

In accordance with Fennia Group's asset-liability management strategy, some of the risk-taking has been transferred to Fennia's balance sheet, and the majority of the risk-taking in market risks takes place in Fennia's balance sheet. Among other things, almost all equity risks and risks of illiquid investments are taken on by Fennia.

According to the Group's ALM model, Fennia's investment assets consist of three portfolio segments: ALM portfolio, investment portfolio and strategic portfolio. The allocation of the total investment assets at fair value stood at EUR 1,798.0 million (EUR 1,885.1 million) at the end of 2025.

Allocation of investment assets at market value (EUR million)	31.12.2025	Share	31.12.2024	Share
Fixed income investments	790.7	44.0%	908.3	48.2%
Equity investments	631.8	35.1%	615.8	32.7%
Real estate investments	375.5	20.9%	361.1	19.2%
Other investments	0.0	0.0%	0.0	0.0%
Total investments	1,798.0	100%	1,885.1	100%

Fennia's market-consistent return on equity in 2025 was EUR 103.7 million (EUR 98.3 million), which was approximately EUR 5 million more than in the previous year. The return on equity comprised a EUR 19.3 million hedging result (EUR -12.9 million), a EUR 59.4 million investment portfolio return (EUR 74.0 million) and the impacts of other investments and expenses totalling EUR 25.0 million (EUR 37.2 million). The figure includes a EUR 10.7 million return on strategic investments (EUR 8.3 million). Return on investment activities at fair value in 2025 amounted to EUR 57.1 million (EUR 127.8 million). Fennia's result also includes the return of its subsidiary, Fennia Life, which had an impact on Fennia's investment return in the amount of EUR 22.6 million (EUR 34.5 million). Net investment income on invested capital was 3.1 per cent (6.9%).

Net income on invested capital from bearing of market risks (EUR million)	31.12.2025			31.12.2024		
	Net investment returns	Invested capital	Return, %	Net investment returns	Invested capital	Return, %
Hedging activities						
Hedging portfolio	-27.3	617.7	-4.4 %	16.6	629.0	2.6 %
Hedged provisions	35.1			-26.6		
Hedging margin	7.8			-10.0		
Non-hedged provisions	11.5			-2.9		
Result of hedging in total	19.3			-12.9		
Investment portfolio						
Equity investments	35.6	360.3	9.9 %	63.1	370.6	17.0 %
Fixed income investments	8.8	267.3	3.3 %	16.0	300.2	5.3 %
Real estate investments	15.0	316.6	4.8 %	-10.2	320.7	-3.2 %
Other investments	0.1	37.5	0.2 %	5.0	40.7	12.4 %
Investment portfolio in total	59.4	981.7	6.1 %	74.0	1,032.2	7.2 %
Strategic portfolio	10.7	81.6	13.1 %	8.3	73.6	11.3 %
Investments outside of revenue calculation	21.2			34.5		
Income, costs and operating expenses not allocated to asset classes	-6.9			-5.7		
Return on own capital	103.7			98.3		

Fennia's hedging performance was strong in 2025. The positive result of EUR 19.3 million (EUR -12.9 million) was influenced by the favourable hedging margin and the positive impacts of un-hedged technical provisions. The hedging margin, or the difference between hedged technical provisions and investments in the ALM portfolio, was EUR 7.8 million (EUR -10.0 million). The positive hedging margin was particularly

affected by the result of interest rate hedged government bonds, as the margins of government bonds in relation to the swap rate narrowed during the year. By contrast, the impact of unhedged technical provisions on the hedging result was EUR 11.5 million (EUR -2.9 million). This was due to the rise in long-term interest rates during 2025.

The investment portfolio also had another strong year. Its impact on the return on equity was EUR 59.4 million (EUR 74.0 million). The return on invested capital was 6.1 per cent (7.2%). Although the equity investments did not yield quite as much as in the previous year, their impact on the return on equity was again significant. The return on equities was EUR 35.6 million, or about half of the previous year's return (EUR 63.1 million). Equity returns came from clearly more diverse sources than previously, when American stocks accounted for most of the returns. Equity returns were negatively affected by costs incurred from strategic hedging. Fennia's portfolio continued to systematically hedge liquid equity risk throughout 2025, and the negative contribution was due to the decline in the market value of options. The return on fixed-income investments, EUR 8.8 million, fell to half of the previous year's return (EUR 16.0 million). This was due to factors such as the narrowing of interest margins no longer being as pronounced as previously. The return on fixed-income investments consisted largely of ongoing returns. However, the biggest change from the previous year was seen in real estate investments, with a positive return of EUR 15 million (EUR -10.2 million). After two difficult years, no further write-downs were required and the real estate portfolio was able to enjoy a positive cash flow from rental income. The return on other investments remained at EUR 0.1 million (EUR 5.0 million). The figure includes matters such as the income of private equity funds.

Strategic investments also generated good returns. The revenue mainly consisted of the development of one of the listed companies and amounted to EUR 10.7 million (EUR 8.3 million).

The return on investments outside the return calculation was EUR 21.2 million (EUR 34.5 million). The return consisted to a large extent of Fennia Life's net return.

Unallocated returns, costs and operating expenses amounted to EUR -6.9 million (EUR -5.7 million), an increase of approximately EUR 1.2 million compared to the previous year.

A.3.3 Fennia Life's investment performance

In investment management, Fennia Life follows the group-level asset-liability management strategy, in which part of the investment assets have been separated into an ALM portfolio covering long-term technical provisions, as well as an investment portfolio free of the technical provision return requirement. The objective of the ALM portfolio is to generate the cash flows from long-term technical provisions with a low market risk. Fennia Life's long-term technical provisions include pension and savings insurance with a technical rate of interest, as well as risk life insurance. The objective of the investment portfolio is to provide added value to the owners with an optimal risk-return ratio.

In accordance with Fennia Group's asset-liability management strategy, Fennia Life aims for a stable and predictable return mainly through fixed-income investments. Fennia Life maintains a level of market risk that achieves the promised interest income for insurance policies with a technical rate of interest, as well as a moderate additional return in a capital-efficient manner. Fennia Life's investment portfolio is a corporate bond-weighted fixed-income portfolio, and thus the hedging result of Fennia Life's ALM portfolio has a proportionally greater impact on the return on equity. Fennia Life does not have listed equity investments or real estate investments.

Fennia Life's investment assets consist of an ALM portfolio, an investment portfolio and a strategic portfolio. The allocation of the total investment assets at fair value stood at EUR 568.2 million (EUR 584.8 million) at the end of 2025.

Allocation of investment assets at market value (EUR million)	31.12.2025	Share	31.12.2024	Share
Fixed income investments	493.5	86.9%	582.0	99.5%
Equity investments	74.7	13.1%	2.1	0.4%
Real estate investments	0.0	0.0%	0.8	0.1%
Other investments	0.0	0.0%	0.0	0.0%
Total investments	568.2	100%	584.8	100%

The market-consistent return on equity of Fennia Life was EUR 8.1 million (EUR 2.1 million), which consisted of the hedging result of the ALM portfolio of EUR 3.6 million (EUR 0.2 million), the result of the investment portfolio of EUR 5.6 million (EUR 2.9 million) and other investments and expenses with a total impact of EUR -1.0 million (EUR -1.0 million).

Return on investment at fair value was EUR -2.4 million (EUR 14.9 million). The return on invested capital was -0.4 per cent (2.5%).

Net income on invested capital from bearing of market risks (EUR million)	31.12.2025			31.12.2024		
	Net investment returns	Invested capital	Return, %	Net investment returns	Invested capital	Return, %
Hedging activities						
Hedging portfolio	-6.9	418.1	-1.7 %	13.0	410.0	3.2%
Hedged provisions	9.8			-12.5		
Hedging margin	2.9			0.5		
Non-hedged provisions	0.7			-0.3		
Result of hedging in total	3.6			0.2		
Investment portfolio						
Equity investments	0.0	0.0	-115.3%	0.0	0.0	-252.5%
Fixed income investments	4.4	132.1	3.3%	7.1	146.4	4.8%
Real estate investments	1.5	-3.1	-49.8%	-5.9	30.2	-19.7%
Other investments	-0.4	1.9	-18.5%	1.7	2.4	71.1%
Investment portfolio in total	5.6	130.9	4.2%	2.9	179.1	1.6%
Strategic portfolio	0.0	24.9	0.0%	0.0	0.2	-8.8%
Investments outside of revenue calculation	0.3			0.3		
Income, costs and operating expenses not allocated to asset classes	-1.3			-1.3		
Return on own capital	8.1			2.1		

Fennia Life's hedging activities achieved a positive hedging result of EUR 3.6 million (EUR 0.2 million). The hedging result comprised a positive hedging margin and the impacts of unhedged technical provisions. The hedging margin, comprising the difference between the investments in the ALM portfolio and the returns on the hedged technical provisions, was positive by EUR 2.9 million (EUR 0.5 million). The hedged technical provisions take into account the change in the present value of future additional benefits, which amounted to EUR -5.9 million (EUR 4.2 million). As long-term interest rates rose, the value of unhedged technical provisions of over 40 years fell, resulting in an impact of EUR 0.7 million on the hedging result (EUR -0.3 million).

The return on Fennia Life's investment portfolio nearly doubled from the previous year. The return on equity, mainly generated by fixed-income investments, was EUR 5.6 million (EUR 2.9 million). Fixed-income

investments amounted to EUR 4.4 million (EUR 7.1 million). The impacts of real estate investments were positive in the year, amounting to EUR 1.5 million (EUR -5.9 million). In practice, the return on real estate investments was affected by the change in the value of the only real estate asset. In the coming years, real estate investments are not expected to make a positive contribution to return on equity. In addition, the return on the investment portfolio was affected by the return on other investments by EUR -0.4 million (EUR 1.7 million). The return on other investments mainly includes the impact of private equity investments.

As in the previous year, the impacts of strategic investments were non-existent. The impact of Fennia Life's investments outside the return calculation was EUR 0.3 million (EUR 0.3 million). In 2025, Fennia Life acquired the entire share capital of Sb Life Insurance Ltd. The investment had no impacts on Fennia Life's return on equity.

Unallocated income and expenses, as well as operating expenses, affected the result of equity by EUR -1.3 million (EUR -1.3 million).

A.4 Performance of other activities

The other companies in the Group do not have a material impact on the Group's result.

A.5 Any other information

There is no other material information on the business and performance of Fennia Group, Fennia and Fennia Life.

B. System of governance

B.1 General information on the system of governance

The system of governance section outlines the governance arrangements for Fennia Group, Fennia and Fennia Life.

B.1.1 The governing bodies of the companies belonging to Fennia Group

B.1.1.1 Supervisory Board

Fennia has a Supervisory Board, which supervises the governance of the company, which is the responsibility of the company's Board of Directors and the Managing Director. The Supervisory Board is tasked with electing the members to Fennia's Board of Directors and confirming the board members' remuneration. In addition, the Supervisory Board issues its statement on the financial statements, the report of the Board of Directors and the auditors' report to the Annual General Meeting, and advises the Board of Directors on issues that are far-reaching or significant in principle.

The Supervisory Board has two committees: the Executive Committee and the Audit Committee. The chairman and the deputy chairman of the supervisory board have the right to attend and speak at Fennia's board meetings.

In 2025, the Supervisory Board had a total of 46 members.

B.1.1.2 Boards of Directors

Fennia Group's Group-level Board of Directors is the Board of Directors of its ultimate parent company, Fennia. As Fennia is Fennia Group's ultimate parent company, its Board of Directors is responsible for the appropriateness of the system of governance and ensures that the Group is governed as a whole. As the Board of Fennia Group's ultimate parent company, Fennia's Board of Directors decides on the Group's targets and strategy and monitors the consistency of risk management, internal control and reporting across the companies in the Group.

The Board of Directors of Fennia and the Board of Directors of Fennia Life are each responsible for the administration and proper organisation of the operations of their own company, as well as for the management of the company in accordance with regulations, orders by authorities, the Articles of Association and the resolutions of the Annual General Meeting. The boards of directors of Fennia and Fennia Life have rules of procedure that record the key tasks of the boards of directors as well as meeting practices. Fennia's Board of Directors had eight members in 2025, and Fennia Life's Board of Directors had four members in 2025.

A joint Human Resources Committee assists the Boards of Fennia and Fennia Life. The task of the Human Resources Committee is to prepare the Board decisions related to the remuneration and remuneration schemes of Fennia Group and its companies. In addition, the Human Resources Committee prepares the appointment and remuneration of the Managing Directors of Fennia and Fennia Life and other senior management, as well as the development and succession planning. The Human Resources Committee also prepares the election of the members of the Board of Directors of Fennia Life

and discusses the personnel strategy and key personnel management development projects. Fennia's Board of Directors elects three members to the Human Resources Committee from among its members, and Fennia Life's Board of Directors elects one member to the Human Resources Committee from among its members.

A joint Audit Committee assists the Boards of Fennia and Fennia Life. The Audit Committee's responsibilities cover matters related to finances and solvency, the adequacy of internal control (including compliance, risk management and internal audit) and the monitoring and assessment of appropriateness. In addition, the Audit Committee takes care of its statutory tasks related to auditing and sustainability reporting assurance. Fennia's Board of Directors elects three members to the Audit Committee from among its members, and Fennia Life's Board of Directors elects one member to the Audit Committee from among its members.

Fennia's Board of Directors is also assisted by the Digitalisation and Transformation Committee, whose task is to monitor and supervise the utilisation of digital technologies at Fennia, the transformation of business operations and the overall management of information. The Digitalisation and Transformation Committee consists of three members elected by Fennia's Board of Directors from among its members.

B.1.1.3 Managing Directors

Fennia and Fennia Life each have a Managing Director appointed by the company's Board of Directors, and whose terms and conditions of employment, salary and bonuses are determined by the Board of Directors. The task of a Managing Director is to oversee their company's day-to-day administration in line with the Board of Directors' guidelines and regulations.

The Managing Director's duties include the management and supervision of the company's business, the organisation of risk and solvency management, and responsibility for the development and coordination of the company's operations.

Fennia's Managing Director is supported by Fennia's management team, and Fennia Life's Managing Director is supported by the management team of the life insurance business.

B.1.2 Information on salary and remuneration policy

The Boards of Directors of the Fennia Group companies approve the remuneration policy and remuneration schemes to be followed in the company, as well as any material changes to them, and annually review the remuneration principles to ensure they are up to date.

According to the remuneration principles, the system must be consistent with and promote the risk management of Fennia Group and its companies. The remuneration principles must not encourage risks that exceed the level of risks based on the companies' risk-bearing capacity or an otherwise sustainable risk level. The remuneration principles must also aim to avoid conflicts of interest. When deciding on the remuneration principles and systems to be followed in the company, the Boards of Directors are responsible for ensuring that the remuneration schemes do not lead to undesirable practices or uncontrolled risk-taking.

The starting point for remuneration in the Fennia Group companies is to provide motivating, fair and reasonable remuneration to management and personnel, in line with the short- and long-term interests of the Group and the Group companies. The establishment, development and implementation of remuneration schemes must take into account Fennia Group's and the Group companies' business strategy, objectives and values, and Fennia Group's and the Group companies' long-term interest, risk management, continuity of the companies' business, and professional business conduct in accordance with sound and prudent business

principles. In addition, the aim is to ensure that the operations of the Fennia Group companies are socially sustainable, create well-being in society and promote good governance.

In Fennia Group companies, the remuneration schemes include both fixed and variable components. For this reason, the companies ensure that fixed components, such as a monthly wage, represent a sufficiently high proportion of the total pay. According to the remuneration principles, the ratio of fixed and variable remuneration may vary by employee group, market situation and the company's operating environment.

In remuneration schemes, targets should be set so that they encourage excellent performance but are within a person's reach and sphere of influence. Incentives are based on the achievement of business, financial or other targets that determine the success of Fennia Group and/or its companies. In addition, personnel covered by incentive schemes may have personal or team-specific targets. In addition to quantitative criteria, qualitative criteria are also taken into account when assessing performance.

As the opportunities for variable remuneration may affect the activities of an individual beneficiary, specific requirements have been set for such remuneration. When assessing an individual's performance, factors taken into account include compliance with the companies' own internal guidelines and policies, the Code of Conduct binding employees, regulations and procedures applicable to the companies, as well as orders and guidelines issued by authorities. Failure to comply with or action against these is grounds for reduction or non-payment of variable remuneration. When determining the amount of remuneration, other factors taken into account include risks that are known of at the time, as well as capital costs and liquidity. Supervisors also ensure that online training defined by the company as a mandatory condition for the payment of the incentive has been completed before any incentives are paid.

Any personal or team-specific targets, indicators and metrics of the incentive schemes, as well as the incentives paid based on outcomes, are decided according to the one-over-one principle, i.e. the decision-maker in matters of remuneration is, as a rule, the supervisor above the supervisor of the person to be rewarded. Salaries, changes to salaries and one-off payments are decided jointly by at least one supervisor in accordance with the one-over-one principle, along with the Strategy, HR and Communications Unit.

The remuneration of persons who are members of the company's senior management, who are responsible for the company's independent control function, or whose professional activities may expose the companies to significant risks is subject to a deferral procedure of at least three years in accordance with regulations and where required by it. Before the payment of the deferred items, the independent functions will comment on the conditions for the payment of the deferred items.

The criteria for determining the pay or other remuneration of the functions of the second and third lines of defence (risk management, compliance and actuarial function, internal audit) are set so as not to compromise the objectivity of their monitoring. The remuneration of persons working in the above independent control functions does not depend on the performance of any business unit they supervise. The joint Human Resources Committee of the Boards of Fennia and Fennia Life oversees the remuneration of persons holding responsible positions in independent control functions, and the companies' Boards decide on their remuneration.

All incentive schemes of Fennia Group and its companies are discretionary. The boards of directors of the companies have the unilateral right to decide on the amendment and termination of the incentive schemes and any groups they cover.

Members of the governance, management or supervisory bodies of Fennia Group companies or persons responsible for key functions do not have special supplementary or early retirement arrangements. However, the management of Fennia and Fennia Life, with the exception of the management of independent key functions, is within the scope of the group pension scheme, which is part of the incentive scheme.

B.1.3 Related party transactions during the reporting period

The Fennia Group companies do not have related party transactions that would have been carried out under non-conventional commercial terms and in any way other than as part of the company's normal business operations.

Information on related party loans between the Group's companies and their related parties, as well as other relevant transactions, is published in the notes to the financial statements of each company.

B.1.4 Changes during the reporting period

Mika Manninen served as Fennia's interim Managing Director from 1 January to 28 February 2025. Fennia's new Managing Director, Hanna Hartikainen, started in her position on 1 March 2025.

At its meeting on 20 November 2024, Fennia's Supervisory Board elected two new members to Fennia's Board of Directors: Sari Leppänen and Rolf Jansson. Their terms of office began on 1 January 2025. Additionally, at its meeting on 27 March 2025, the Supervisory Board elected one new member, Anna-Riikka Hovi-Taunila, whose term of office began on 27 March 2025, to replace Johanna Ikäheimo, who resigned from the Board on 31 December 2024.

The joint Human Resources Committee of the Boards of Directors of Fennia and Fennia Life began operating in February 2025, when the Board of Directors of Fennia approved the rules of procedure of the joint Human Resources Committee of the Boards of Directors at its meeting on 14 February 2025 and the Board of Directors of Fennia Life approved the rules of procedure of the joint Human Resources Committee of the Boards of Directors at its meeting on 13 February 2025. Previously, only Fennia's Board of Directors had a separate Human Resources Committee.

B.1.5 Assessment of the suitability of the company's system of governance

In early 2025, the Boards of Fennia and Fennia Life assessed the fitness and propriety of the companies' governance systems. The assessment has been based on reports from 2024 concerning the development of the company's business and investment activities, as well as the 2024 reporting by risk management, compliance, actuaries and internal audit, and the assessment carried out by risk management, compliance and internal audit of Fennia Group's governance system.

Based on the reporting of the operational management and independent functions, as well as the assessment of the governance system of the independent functions, the Boards of Fennia and Fennia Life have each assessed that, based on the information received, the company's internal control is properly organised and that the company's governance system is appropriate, adequate, effective and up-to-date with respect to the nature, scope and complexity of the company's operations.

B.1.6 Management of investments

Fennia Group's asset-liability committee (ALCO) creates a proposal for the insurance companies' boards for a company-specific investment plan that implements the group's balancing strategy, while taking into account the company-specific return targets and risk-taking capacity. The ALCO is responsible for setting the company-specific market risk levels without breaching the restrictions imposed by the Boards of Directors. It also reports to the Boards on the balance sheet's return and risk development. Fennia's asset-liability management, in turn, is responsible for implementing the investment plan and the fixed-income derivatives hedging the ALM portfolio's technical provisions.

The primary measure of the performance of investment activities is the market-consistent equity return, which best measures Fennia Group's ability to meet its technical provision obligations. The purpose of the investment sub-segments (ALM portfolio, investment portfolio) is to contribute to this goal.

Fennia Group uses external asset managers to manage the short-term corporate bond investments in the ALM portfolio that covers the technical provisions. In these mandates, the return target has been set to correspond to the return of the six-month Euribor rate, which is swapped through interest rate swaps for a fixed rate corresponding to the duration of Fennia Group's liabilities. The credit risk limits, the duration of the mandates, the instruments and sustainability targets allowed in the mandates have been carefully defined, and the mandate investment limits support the realisation of the asset-liability strategy. When the mandate managers achieve a return in line with the market level of the short-term interest rate over the long term, the total return of the ALM portfolio with interest rate swaps will fully cover the cash flows of the liabilities and the return requirement.

The management of government bond investments and the customer financing portfolio related to the ALM portfolio is the responsibility of Fennia's asset-liability management unit and Fennia's customer financing unit. Fennia's asset-liability management unit is responsible for the implementation of the ALM portfolio's interest rate swaps.

In addition, Fennia and Fennia Life have outsourced part of the management of the investment portfolio, i.e. the part of the liabilities that exceeds the best estimate, to an external asset manager. The fixed-income and equity portfolios have been outsourced to different asset managers, so the asset managers cannot perform allocations between equity and fixed-income investments. This is the responsibility of Fennia's asset-liability management unit. Fennia Group's Asset-Liability Committee sets the neutral allocation and limits of the liquid part of the investment portfolio so that even with maximum risk allocation in a poor market scenario, the company's risk-taking capacity is not exceeded when taking all investments into account. The asset managers' task is to aim for a better return level than the market index set by Fennia Group, mainly through securities selection and tactical allocation between fixed-income asset classes.

The management of real estate investments related to Fennia's investment portfolio has been outsourced to an external asset manager. Real estate investments are managed in accordance with the real estate strategy defined by Fennia's asset-liability management. The objective of the real estate strategy is to serve the implementation of the overall asset-liability management strategy.

Investments in the ALM portfolio's corporate bond mandate are made through direct investments, and investments are mainly held until maturity, when 33–50% of the portfolio rotates in the long term on an annual basis, but no transaction costs are incurred from sales. Fixed-income investments in accordance with the portfolio's fixed-income mandate are carried out with funds that, as a rule, do not incur separate trading costs. The funds' fees are taken into account in the returns on the funds and therefore in the performance of the asset manager. Investments in accordance with the investment portfolio's equity mandates are made with direct shares. This enables the management of the tracking error of the equity portfolio and the effective consideration of Fennia's sustainability targets.

The asset managers' objective is to exceed the set return target after all costs. In the ALM portfolio's corporate bond mandates, the target is a return corresponding to the six-month Euribor rate, and in the liquid investment portfolio mandates, the return on the market indices set for them. The costs to be taken into account include the costs of trading and asset management fees. Separate rotation limits or metrics have not been deemed necessary, as tracking the return after all costs also encourages the asset manager to keep costs low. Restrictions on the portfolio's deviation from the benchmark index have been defined for share mandates consisting of direct equity investments.

The mandates given to asset managers (corporate bonds, liquid interest rate, liquid equity) also have separately defined sustainability restrictions. All liquid interest mandates, except those implemented

with funds, follow the exclusion list defined by Fennia. In addition, the equity mandates restrict the emissions of the portfolio relative to the benchmark index. All sustainability restrictions, in turn, serve the overall goal of Fennia Group, which is to reduce investment emissions by half by 2030 (from the level at the beginning of 2020) and further to zero by 2050.

Fennia's asset-liability management monitors the level of return and risk, the progress towards sustainability targets, the limits and the overall situation of all outsourced mandates on a daily basis, and through quarterly or more frequent separate meetings with the asset manager. The asset managers report on the events of their mandates on a daily basis, whereby Fennia Group's own systems produce a daily performance and risk analysis of the mandates. In addition, the asset managers report on the returns of the portfolios they manage to Fennia Group on a monthly basis.

Fennia Group pays a fixed fee based on market values for the asset management service. All asset management agreements of Fennia and Fennia Life's liquid assets are valid until further notice, but can be terminated with less than a month's notice. In Fennia's real estate investments, the notice period is less than a year.

Unit-linked insurance policies' investments are either individual funds or are determined through asset management strategies provided by asset managers. The choice of individual funds is made by the customer. In asset management strategies, the asset manager agrees with the policyholder on the desired investment strategy. Asset managers providing asset management services report annually to Fennia Life on their strategies' risks, investment rotation rates and costs. No separate limits have been set for the rotation rates of the strategies.

B.2 Fit and proper requirements

The Fennia Group companies have unified principles approved by the Group companies for assessing fitness and propriety approved by the boards of directors, the up-to-dateness of which is regularly assessed. The purpose of the principles is to ensure that, in particular, the persons responsible for the management, key functions, and critical and important tasks in Fennia Group – but also the entire personnel – are fit and proper for their tasks. In addition, the principles require that the boards of directors of Fennia Group companies as a whole have sufficient expertise and experience required for the task.

In Fennia Group, the assessment of fitness and propriety applies to the entire personnel. In the fitness and propriety assessment, the principle of proportionality applies to persons who are not responsible for the company's management, key functions or critical and important tasks. In this case, the assessment is influenced by the role of the person and the related responsibilities within the organisation. The fitness and propriety assessment of the personnel is carried out as part of the recruitment process, internal control and managerial work.

The scope of the regular fitness and propriety assessment to be sent to the supervisor includes the members of the companies' boards of directors, Managing Directors, deputy Managing Directors and persons responsible for key functions. In addition, the scope of the company's internal fitness and propriety assessment carried out with similar procedures includes the persons responsible for the company's critical and important tasks.

Fennia's Supervisory Board is responsible for assessing the fitness and propriety of Fennia's Board members. The boards of the parent companies belonging to Fennia Group are each responsible for assessing the fitness and propriety of the members of the boards of their subsidiaries. In addition, the boards of all Fennia Group companies are responsible for assessing the fitness and propriety of the company's Managing Director and acting Managing Director, as well as those responsible for key functions and other persons appointed by the boards. Supervisors are responsible for the fitness, propriety and professional competence of other personnel, as well as the related assessments and documentation.

The fitness assessment is carried out as an overall assessment. As part of the fitness assessment, the person subject to the assessment is required to have sufficient training to meet the professional competence criterion, or professional competence, skills and experience, suitable professional and other experience for the task, as well as such qualities that are required for success in the task. The requirements of sufficient professional competence, skill and experience are applied taking into account the quality, scope and complexity of the company's operations. The fitness assessment is not limited to the assessment of a person's fitness for a task within the scope of assessment when selecting or appointing but is continuous. In addition, the fitness assessment also involves the organisation of additional vocational training, so that the person can meet the growing requirements as the professional requirements required for the task change.

When assessing the propriety of a person, attention is paid to the person's honesty, possible material payment defaults and other financial ambiguities, taking into account any known criminal acts and disciplinary or administrative violations, as well as relevant information about the person's character, behaviour and transactions.

The professional qualifications, skills and experience of the boards of directors of the Fennia Group companies are also evaluated as a whole. No board member is required to have specific professional qualifications, skills and experience in all areas of the company's operations. However, the collective professional qualifications, skills and experience of the Board of Directors of each company as a whole must be such that the company's professional management and supervision can be realised.

The fitness and propriety assessment is always carried out when a person is elected or appointed from outside or inside the company as the person responsible for the management of the group company or a key function or critical and important task, or when the person's area of responsibility expands significantly from the previous one.

Each member of the board is required to continuously meet the criteria set for the propriety of the person. The information about the fitness and propriety of the persons covered by the fitness and propriety assessment is reviewed regularly. In addition, a reassessment is always made if the person's actions or events related to them may jeopardise the reliability of the company's management or the trust of the market in the company's operations.

B.3 Risk management system including the own risk and solvency assessment

B.3.1 Risk management system

In Fennia Group, risk management means coordinated strategies, processes, principles and measures to identify, assess, measure, monitor and manage risks faced by the Group and the Group companies and to raise and report them.

Solvency management, on the other hand, means strategies, processes, principles and measures to determine and steer the Group's and the Group companies' risk-bearing capacity, risk appetite and limitations of essential risks.

Fennia's Board of Directors, in its capacity as the Board of Directors of the Group's parent company, bears the responsibility for risk and solvency management and for its integration into the Group's system of governance. It is the responsibility of Fennia's Board of Directors to ensure that the special characteristics of the companies belonging to the Group and the intra-Group connections (including internal transactions, double capital, transferability of capital and use of capital in general) are taken into consideration appropriately.

The Board of Directors of Fennia Life is responsible for ensuring that the company abides by the Group's risk and solvency management policy. In particular, it is responsible for ensuring that the companies have in place a system of governance that is adequately organised with regard to the quality, scope and complexity of the operations, including internal control and a risk management system.

The Board of Directors of Fennia Life's subsidiary Fennia Life Insurance Ltd is responsible for ensuring that the company complies with Fennia Group's risk and solvency management principles. In particular, it is responsible for ensuring that the companies have in place a system of governance that is adequately organised with regard to the quality, scope and complexity of the operations, including internal control and a risk management system.

In the case of other Group companies, Fennia Group's risk and solvency management principles are followed where applicable. The other companies in the group are mainly real estate companies.

The functioning and reporting of the risk management system is monitored by the joint Audit Committee of the boards of Fennia and Fennia Life.

B.3.1.1 Risk management executive group

The Group has a risk and solvency management executive group to prepare, steer and co-ordinate tasks related to risk management and to disseminate information. The group is chaired by the risk management director.

B.3.1.2 ALCO committee

The Group-level ALCO committee convenes for the purposes of managing the insurance companies' balance sheet, with the main purposes of creating a proposal for an investment strategy (ALM plan) for the insurance companies' boards, changing the strategy if necessary without violating the restrictions imposed by the boards, and reporting the balance sheet risks to the boards. The committee is chaired by the Managing Director of Fennia.

B.3.1.3 Steering model of the risk management system

The steering model of the risk management system is based on a three-defence-line model, in which:

- The first line of defence, i.e. the business and support functions, has the primary responsibility for day-to-day risk management and risk reporting in accordance with the approved principles.
- The second line of defence is responsible for matters such as the interpretation, development, planning and reporting of risk and solvency management, and supports, monitors and assesses the implementation and adequacy of the first line of defence's risk and solvency management processes.
- The duty of the third line of defence is to ensure the effectiveness and efficiency of internal control and risk and solvency management.

In the three-defence-line model, responsibility for risk, solvency and asset-liability management is allocated as follows between the various operators:

- Managing Director
Assisted by the executive management, the Managing Director bears overall responsibility for the appropriate preparation and implementation of risk and solvency management in accordance with the Board of Directors' decisions.

- Business and support functions

Each business and support function is primarily responsible for day-to-day risk management and risk reporting in accordance with the approved principles, monitoring the overall risk profile of its own area (with the support of the second line of defence) and ensuring the Group's risk and solvency management in accordance with the documentation in its area.

- Actuarial function

The insurance company's responsible actuary is in charge of the actuarial function and sees to it that the actuarial methods applied in pricing and in calculating technical provisions are appropriate. The actuarial function participates in the efficient implementation of the risk management system, in the creation of risk management methods in particular, but also in the implementation of the company's Own Risk and Solvency Assessment.

- Risk management function

The risk management function bears primary responsibility for the tasks of the second line of defence, and is responsible for matters such as the interpretation, development, planning and the drafting of instructions and procedures of risk and solvency management. The function's task is to maintain an overall view of the risk profile of the Group and the companies in the Group and to report it to the management of the companies. The function also supports the Board of Directors and the Managing Director as well as the business and support functions in their risk and solvency management work by participating in the development of the risk management system, assessing its operations and preparing analyses to support the decision-making concerning the risk position. The Group's data protection officer also works in the risk management function.

- Compliance function

The compliance function, part of the second line of defence, is responsible for ensuring that the operations comply with regulations, financial sector self-regulation and the Group's internal guidelines, and that customer relationships are managed according to the appropriate procedures. The function that oversees regulatory compliance also identifies and assesses the impacts of regulatory changes and the risks related to regulatory non-compliance, as well as the sufficiency of measures taken to prevent and rectify possible shortcomings in regulatory compliance. In addition, the compliance function promotes compliance by providing proactive advice, as well as developing internal procedures which allow the effective and appropriate monitoring of compliance.

- Internal audit

Internal audit is a function that supports the Group in the meeting of targets by offering a systematic approach to the assessment and development of the organisation's risk management, control, management and administrative processes. The task of internal audit is to monitor and evaluate the adequacy, appropriateness and effectiveness of the group's internal control and other management.

Both the risk management function and compliance function have been integrated into the Fennia Group organisation in a manner that ensures their independence of the operational activities. The functions are free from influences that might compromise the objective, equal and independent performance of their tasks. Internal audit, on the other hand, is independent of the functions of both the first and second lines of defence.

B.3.1.4 Risk management function

The Group's risk management function is organised under the risk management, compliance and actuaries function. At the end of the reporting period, the function was organised under the Group's CFO. The risk

management function operates as an independent unit and provides risk management services to all Group companies that have a licence to engage in insurance operations. The regulation relevant to each company is taken into account in the operations.

The work of the risk management, compliance and actuaries function is coordinated by the risk management director, who bears the overall responsibility for steering and developing the activities of the second line of defence. The risk management function reports on its decisions and measures to the boards of directors' audit committee and to the boards of directors and Managing Directors of the group companies.

In order to anticipate operational risks, the risk management function has the right to be informed of the operating and development plans of the companies and units of the Group, as well as all other information necessary for its work. The risk management function is not involved in making business decisions.

The principles of the risk management system are described in the policy documents. They define the risk management responsibilities of functions and units. The key tasks that the risk management function is responsible for include

- assisting the Group's boards of directors, Managing Directors and business and support functions in developing and maintaining an effective risk management system
- assessing and monitoring the effectiveness of the risk management system
- assessing decision-making powers regarding risk-taking and monitoring compliance with them
- supporting decision-making on the risk and solvency position of the Group companies' boards and executive management with risk and solvency analyses and monitoring the effects of decisions
- maintaining a holistic view of the risk profiles of the Group and the Group companies
- assessing risk identification, measurement, monitoring, management and reporting processes and their effectiveness
- assessing risks and monitoring developments related to valuation methods, in particular balance sheet valuation methods for solvency calculation
- assessing and monitoring the appropriateness, completeness and functionality of the solvency calculation according to the standard formula
- identifying and assessing risks that may affect the group in the future
- participating in the assessment of risks related to new products, services, investment instruments and processes, and monitoring developments
- coordinating the preparation of own risk and solvency assessments (ORSA).

The risk management function regularly evaluates the structure and effectiveness of the risk management system, reports its findings to the boards and, if necessary, proposes development measures.

B.3.1.5 Objectives of the risk management system

The key objective of the risk management system is to ensure a balance between risks, equities and the result, the high quality and cost-effectiveness of processes, the strategic and operational agility of the company, and adequately efficient management of reputation risks. Based on these matters, an Own Risk and Solvency Assessment is drawn up at least once a year for the Group and individual companies. The reports encompass the key observations in terms of managing the companies on risks and solvency needs and targets, and on the risk-taking limits set on their basis.

B.3.2 Risk and solvency assessment

The Own Risk and Solvency Assessment (ORSA) is a tool for the Board of Directors, Managing Director and other executive management to support capital management, business planning and product development. The own risk and solvency assessment serves to identify risks and provide an understanding of the capital needs for risks in both the short and long term. The ORSA also includes the performance of forecasts and scenarios for the financial future and the possible financial consequences resulting from materialised risks.

Own Risk and Solvency Assessment is part of the continuous risk management process, and as the outcome of the process, an extensive summary of the key future estimates and risks is produced at least once a year. This summary, the ORSA report, is also submitted to the insurance sector's supervisory authority in accordance with the regulations. A significant part of the results contained in the report are evaluated and reported regularly during the year. The ORSA report will be updated if there are significant changes in its underlying assumptions or businesses, risk positions, or other factors that significantly affect the financial condition. In this case, a so-called limited ORSA report may be issued, in which only a part of the extensive ORSA report is updated. The ORSA report produced in the ORSA process includes an overview of the current situation and future outlook in terms of the business operations, strategic decisions and policies, risks and solvency.

The ORSA process includes both quantitative and qualitative aspects. Quantitative areas refer to aspects that can be measured in a reliable manner so that their monetary effects can be assessed with high confidence and with reliable measurement techniques. Qualitative areas, on the other hand, refer to aspects with effects that are impossible to mathematically assess in a straightforward manner, but they are based on qualitative assessments made by management and experts. These include, for example, the impact of changes in the business environment on the company's business operations.

The key elements of the ORSA process are described in the following diagram.

The Board of Directors of Fennia Group's ultimate parent company and the boards of directors of the Group companies approve the ORSA report, which is prepared at least once a year. It is the Board of Directors' responsibility to ensure that risk and solvency assessments are drawn up, and that they are

taken into account in all strategic decisions. The Board of Directors actively participates in the ORSA process by, among other things, taking part in the strategic planning and, in particular, through audit committee work. The Audit Committee monitors and guides the processes and reporting related to risk and solvency management.

Fennia's risk management director is responsible for ensuring that ORSA reports are prepared. It is the responsibility of the Managing Director and executive management to integrate the ORSA process into the business so that it is an integral part of the business strategy and is taken into account in strategic decisions. The risk management function is responsible for coordinating the production of ORSA reports. The reports are produced in cooperation with the business and support functions.

The own assessments of the current solvency need are based on own assessments of eligible own funds and their necessary minimum level for the same confidence interval as in the regulatory solvency calculation. This assessment serves to evaluate the key fundamental assumptions of the regulatory solvency calculation, the extent to which one's own view differs from them and the estimated impact on the solvency position.

The long-term solvency need is analysed by assessing the impact of various adverse long-term scenarios on the solvency position under the solvency regulation, taking into account the business strategies for the coming years. Based on the results of these scenarios, an estimate is prepared on how much the solvency position may adversely fluctuate and to what extent such fluctuations should be prepared for with capital.

On the basis of these estimates, the need for a capital increase to the regulatory solvency capital requirement and the solvency target level are determined. In the ORSA process, the regulatory solvency of Fennia Group, Fennia and Fennia Life has been estimated to be able to endure economic volatility also in the long term.

The process described above is linked to the capital management process, which is further described in the 'Objectives, policies and processes of managing own funds' section.

B.4 Internal control system

The goal of internal control at Fennia Group is to ensure the appropriateness, efficiency and productivity of the operations, the reliability of the financial data and reporting, and compliance with the regulations. Effective internal control requires the input of all employees, supervisors, executive management and governing bodies.

Fennia Group's internal control system is based on the widely used COSO standard. In accordance with the standard, the control system is examined through the following elements:

- control environment
- risk assessment
- control measures
- information and communication
- monitoring.

B.4.1 Control environment

The boards of directors of the Group companies bear overall responsibility for the functioning of internal control in their own companies. In addition, Fennia's Board of Directors, as the Board of Directors of Fennia Group's ultimate parent company, is responsible for ensuring that internal control is consistently organised

in each Fennia Group company. The executive management of the companies ensures that internal control is organised in practice.

To reinforce a good control environment, executive management and supervisors promote, as part of their day-to-day work, Fennia Group's values, good leadership, appropriate delegation of authority and responsibility, efficient organisation and supervision of the operations, and personnel development.

Personnel are encouraged to report any behaviour that is unethical or against the rules and to develop both their own competence and the company's operations.

B.4.2 Risk assessment

Risk identification and management are primarily the responsibility of the business and support functions, as well as risk management, compliance and actuarial functions support them in this work. Risks are assessed as part of the day-to-day operations and in regular risk assessments. The management of operational risks is discussed further in the 'Risk profile' section.

B.4.3 Control measures

Control measures are processes, procedures and guidelines aimed at ensuring that the organisation operates in accordance with the objectives and framework conditions set by the management. These include matters such as various approvals, authorisations, verifications, reconciliations, operational audits, authorisation management, asset protection measures and the segregation of duties.

Most control measures are carried out as part of day-to-day operations and management. The practical implementation of control measures is the responsibility of everyone at Fennia, and the ongoing control measures of executive management and supervisors play an important role in this. Through the development of processes, Fennia Group and Group companies aim to enhance the use of automatic system controls in its control procedures.

B.4.4 Information and communication

Fennia Group and the Group companies wish to ensure that shared information is up to date and relevant to the organisation's operations and decision-making, and that it is reported in the right format and in a timely manner. The management of operations aims to ensure that the flow of information in the organisation is open both vertically and horizontally throughout the organisation.

B.4.5 Monitoring

Monitoring is divided into continuous monitoring and control and auditing, which are used to assess the functioning and quality of internal control. Continuous monitoring takes place in operational activities. It includes regular executive control activities as well as control activities related to the performance of the duties of supervisors and the entire staff. Every employee is responsible for detecting possible deficiencies and development areas in internal control in their own work and reporting on them for the purpose of devising measures. Monitoring also includes internal audits, as well as separate compliance audits and monitoring. The organisation may also carry out self-assessments.

An independent overall assessment of the Group and Group companies' governance system and written operating principles is carried out in Fennia Group companies annually, providing the boards of directors and executive management information about the functioning of internal control. Internal audit, risk

management and compliance are responsible for the practical implementation of this business-independent assessment.

B.4.6 Compliance function

In Fennia Group, the parent company Fennia's compliance function manages the tasks of the compliance function in the parent company Fennia. Fennia Life has outsourced the compliance function to Fennia, which will carry out these tasks in accordance with a service agreement.

The compliance function operates in accordance with the compliance principles approved by the boards of the Fennia Group companies. The principles define the role and tasks of the compliance function in the organisation. The compliance function is responsible for ensuring that Fennia Group's operations comply with regulations, financial sector self-regulation, the Group's internal guidelines, and that customer relationships are managed according to the appropriate procedures. The function that oversees regulatory compliance also identifies and assesses the impacts of regulatory changes and the risks related to regulatory non-compliance, as well as the sufficiency of measures taken to prevent and rectify possible shortcomings in regulatory compliance. In addition, the compliance function promotes compliance by providing proactive advice and develops internal procedures with which compliance can be advanced and monitored effectively and appropriately.

The compliance function abides by objectivity and independence in its work. To ensure independence, the compliance function does not participate in business decisions, nor is it responsible for business or other support functions. The compliance function reports regularly on significant compliance risks to the Managing Directors, to Fennia's and Fennia Life's shared audit committee, and to the companies' boards of directors.

B.5 Internal audit function

B.5.1 Organisation and independence

Internal audit is a Group-level independent function that supports Fennia Group, its companies and the companies' management in achieving the Group's strategy and targets. Internal audit offers a systematic approach to the assessment and development of the organisation's risk management, control, management and administrative processes.

Fennia Group's internal audit is responsible for producing internal auditing services for the companies belonging to the Group. The internal audit is organised within the parent company and was administratively situated under the Managing Director of the parent company at the beginning of 2026. In 2025, the internal audit function reported administratively to the CFO of the parent company, who served for part of the year as Fennia's interim Managing Director. It reports the results of its work directly to the joint Audit Committee of the Boards of Directors of Fennia and Fennia Life, the companies' Boards of Directors and their management. Internal audit can also support the implementation of audits through the use of an external partner, which has carried out about two audits per year at the Group level.

In addition to the organisation and reporting relationships, internal audit ensures the independence of its operations by having no functional responsibility for the functions under assessment and by not participating in their decision-making. Internal audit reports annually to the boards regarding the compliance with independence requirements. The remuneration of the internal audit function does not depend on the performance of the Group or its companies, and the remuneration of the director of internal audit is defined by the joint Human Resources Committee of the Fennia Group companies and confirmed by the parent company's Board of Directors.

B.5.2 Operating principles and tasks

The task of internal audit is to objectively assess the adequacy and effectiveness of the group's internal control and governance in relation to matters such as the implementation of the company's strategy and the achievement of its objectives, the effectiveness of risk management, the use of resources and compliance with legislation.

The internal audit function has operating guidelines approved by the boards of directors which define the internal audit's purpose, tasks, authorisations and mandates, position in the organisation, and right of access to information. The boards of directors approve the internal audit action plan and material changes to the operating principles.

The internal auditing function carries out its duties in compliance with regulatory requirements, company values and good internal auditing practice. Good auditing practice and independent and objective internal operations are outlined by the professional standards issued by the Institute of Internal Auditors, among other things.

B.6 Actuarial function

The insurance company's responsible actuary is in charge of the actuarial function and sees to it that the actuarial methods applied in pricing and in calculating technical provisions are appropriate. The responsible actuary also determines the level of technical provisions.

The actuarial function's tasks include participating in the implementation of the risk management system, calculating the technical provisions, ensuring the appropriateness of tariffs, assessing the solvency level, reporting that serves the business operations, and participating in improving the quality of information. The actuaries also participate in the implementation of the own risk and solvency assessment.

At Fennia Group, the individual insurance companies have their own actuarial functions. The actuarial function and responsible actuary of Fennia operate administratively under the Group's risk management director and report directly to the joint audit committee of Fennia's and Fennia Life's boards of directors, and to Fennia's Board of Directors and Managing Director. The actuarial function and responsible actuary of Fennia Life operate administratively under the Managing Director of Fennia Life, in addition to which some of the tasks of the actuarial function of Fennia Life have been outsourced to the actuarial function of Fennia. The actuarial function of Fennia Life reports directly to the joint Audit Committee of the Boards of Fennia and Fennia Life, to the Board of Directors of Fennia Life and to the Managing Director.

B.7 Outsourcing

Outsourcing refers to a company belonging to Fennia Group entering into an agreement with an external service provider on the service provider performing a process, service or task within the company's line of business that the company would otherwise perform itself.

The principles of arranging outsourcing are attached to the Group's Common Risk Management Principles approved by the Boards of Directors of the Fennia Group companies. The purpose of the principles is to ensure that outsourcing is arranged so that the risks related to outsourcing are controlled, the operations continue uninterrupted, and the regulatory requirements related to outsourcing are met. Responsibility and decision making for outsourcing is shared by the Group companies' boards of directors, business management and the risk management function. In the case of outsourcing of a critical and important

function, a person responsible for the outsourcing is always appointed at the outsourcing company from among the members of the business management.

Outsourcing a function requires that assigning that function to an external service provider is a comprehensively more appropriate solution than providing the function with the Fennia Group company's own organisation. When assessing the appropriateness of outsourcing, particular attention is paid to efficiency gains, cost savings, simplification of processes and increased expertise.

When outsourcing decisions are made, an outsourcing report is always prepared. If the outsourced function or service is estimated to meet the criteria for critical and important outsourcing set out in the regulation, the report is carried out at a more detailed level, paying more attention to matters such as the service provider's ability to provide the service without disruption, the continuity of the service, audit rights, and the ability to transfer the activity to another service provider or to self-service, if necessary.

As appropriate for the nature of each outsourcing, appropriate means to monitor the quality and continuity of the service must be defined for the outsourcing of critical and important functions.

The services outsourced by the Group to external service providers include information system operation, maintenance and support services, asset management and services supporting claims activities. The outsourced functions are mainly performed within the European Union.

Within Fennia Group, the functions Fennia Life has outsourced to Fennia include but are not limited to insurance and claim services, financial, risk management, compliance and internal auditing services. With the exception of the actuarial function, Fennia Life Insurance has outsourced its key functions, i.e. the risk management function, the compliance function and the internal audit function to Fennia.

In Fennia Group, Fennia has outsourced 15 critical and important functions, Fennia Life has outsourced 10 critical and important functions, of which 7 are in-house outsourcing arrangements, and Fennia Life Insurance has outsourced 12 critical and important functions, of which 5 are in-house outsourcing arrangements.

B.8 Any other information

There is no other material information about Fennia Group's, Fennia's and Fennia Life's system of governance.

C. Risk profile

C.1 Risk profile

The risk profile consists of quantitative and qualitative factors. The quantitative aspect of the risk profile is characterised by own assets (the difference between assets and liabilities), own funds, various capital requirements and the quality, substitutability and transferability of the assets needed to cover them. The qualitative aspect of the risk profile most often describes factors that are difficult to measure, including matters such as reliable management, internal control and risk management, as well as the planning and monitoring of activities.

The insured's benefits can be secured from the quantitative perspective in the optimal way when

- its eligible own funds exceed the solvency capital requirement and are at an adequate level
- the outstanding risk position in relation to the free risk capital (the difference between the eligible own funds and the solvency capital requirement) is not too great.

In a market-consistent valuation environment, risk-taking capacity is illustrated by the difference between balance sheet assets and liabilities, in which the Group-level eligibility, substitutability and transferability of balance sheet items, i.e. the market-consistent amount of the Group's eligible own funds, is taken into account. The more of its the company has in terms of eligible own funds, the greater its risk-bearing capacity, and the more freedom it has to decide which risks it will bear in its operations. From a quantitative perspective, on the other hand, risk-taking is illustrated by the solvency capital requirement of the operations. The higher the risk, the higher the solvency capital requirement.

Examining the solvency capital requirement in more detail provides insight into what the risks in the balance sheet consist of. Analysing the amount of eligible own funds and the solvency capital requirement and their ratio (relative solvency position) provides an understanding of the risk profile. Therefore, determining the risk profile requires the identification and understanding of all the above factors. The relative solvency position alone does not sufficiently reflect the risk profile, as the same relative solvency position can be achieved in many different ways.

C.1.1 Fennia Group's risk profile

Below is a breakdown of the solvency capital requirement structure of Fennia Group by risk area, excluding the loss-absorbing effect of future bonuses and deferred tax liabilities (before loss-absorbing items) at the end of the reporting period and the previous reporting period. Fennia Group's solvency capital requirement consists largely of the market risk, the contribution of which to the solvency capital requirement was 69.2 per cent (72.5%).

Solvency Capital Requirement (EUR million)	31.12.2025	Contribution	Share	31.12.2024	Contribution	Share	Change
Market risk	460.2	435.2	69.2%	418.3	399.2	72.5%	41.9
Counterparty risk	66.7	31.2	5.0%	45.6	20.4	3.7%	21.1
Underwriting risk	175.5	104.1	16.6%	150.6	87.8	15.9%	24.9
Intangible asset risk	0.0	0.0	0.0%	0.0	0.0	0.0%	0.0
Operational risk	23.9	23.9	3.8%	18.0	18.0	3.3%	5.9
Capital requirement for other financial sectors	34.3	34.3	5.5%	25.2	25.2	4.6%	9.0
Diversification	-131.8	-	-	-107.2	-	-	-24.6
Solvency Capital Requirement before loss-absorbing items	628.8	628.8	100.0%	550.6	550.6	100.0%	78.2

Fennia Group's risk profile

C.1.2 Fennia's risk profile

Below is a breakdown of the solvency capital requirement structure of Fennia by risk area, excluding the loss-absorbing effect of deferred tax liabilities (before loss-absorbing items) at the end of the reporting period and the previous reporting period. Fennia's solvency capital requirement consists largely of the market risk, whose contribution to the solvency capital requirement was 79 per cent (80.7%).

Solvency Capital Requirement (EUR million)	31.12.2025	Contribution	Share	31.12.2024	Contribution	Share	Change
Market risk	421.5	404.0	79.0%	402.2	388.2	80.7%	19.3
Counterparty risk	58.4	26.6	5.2%	34.7	14.6	3.0%	23.7
Underwriting risk	120.4	66.5	13.0%	118.8	64.7	13.5%	1.6
Intangible asset risk	0.0	0.0	0.0%	0.0	0.0	0.0%	0.0
Operational risk	14.2	14.2	2.8%	13.3	13.3	2.8%	0.9
Diversification	-103.1	-	-	-88.2	-	-	-14.9
Solvency Capital Requirement before loss-absorbing items	511.4	511.4	100.0%	480.8	480.8	100.0%	30.6

C.1.3 Fennia Life's risk profile

Below is a breakdown of the solvency capital requirement structure of Fennia Life by risk area, excluding the loss-absorbing effect of future bonuses and deferred tax liabilities (before loss-absorbing items) at the end of the reporting period and the previous reporting period. The largest contribution to Fennia Life's solvency capital requirement was the market risk, 59.2 per cent (53.8%).

Solvency Capital Requirement (EUR million)	31.12.2025	Contribution	Share	31.12.2024	Contribution	Share	Change
Market risk	97.3	83.7	59.2%	78.5	65.3	53.8%	18.9
Counterparty risk	10.4	4.0	2.8%	10.6	4.2	3.5%	-0.2
Underwriting risk	69.0	48.5	34.3%	63.6	46.9	38.7%	5.3
Intangible asset risk	0.0	0.0	0.0%	0.0	0.0	0.0%	0.0
Operational risk	5.3	5.3	3.7%	4.9	4.9	4.0%	0.4
Diversification	-40.4	-	-	-36.2	-	-	-4.2
Solvency Capital Requirement before loss-absorbing items	141.5	141.5	100.0%	121.4	121.4	100.0%	20.1

C.2 Underwriting risk

C.2.1 Non-life underwriting risks

Fennia's non-life insurance risks are divided into three main classes, which are premium risk, reserve risk and large loss risk.

The premium risk is linked to the selection of the risk to be insured, sales steering and, in particular, to the pricing of the insured risk. It is therefore a risk of loss resulting from the costs of future insurance claims, including operating expenses, exceeding the premiums written for insurance.

The reserve risk is caused by an unfavourable change in the value of the technical provisions. Reserve risk is related to the uncertainty of assumptions made in the calculation of technical provisions and adverse deviations of estimated premiums, claims amounts, operating expenses, commissions and cash flows from such activities, compared to the realised income and expenses. The technical risk factors for reserve risk include factors related to premium provisions, collective provisions and case-by-case provision risks.

Major loss risk, or disaster risk, refers to a potential loss event that leads to very large economic impacts, occurs very rarely and differs significantly from the loss statistics. Such incidents may be individual major losses or, for example, losses caused by extreme weather phenomena that affect a wide range of insured persons.

C.2.2 Life underwriting risks

Life insurance risks fall into four main categories: biometric risks, behavioural risks, expense risks, and major loss risks.

Biometric risks refer to a situation where the company has to pay more in compensation for death, disability or medical expenses than anticipated. In addition, biometric risk may materialise as longer-than-expected pension compensations if there are changes in the longevity of the population.

Behavioural risk refers to a situation where the company is exposed to uncertainty related to policyholders' behaviour. Policyholders have the right to terminate the payment of insurance premiums and possibly terminate the insurance contract prematurely. Behavioural risks are therefore further categorised into lapse risks and surrender risks. Surrender risk refers to situations where the policyholder can withdraw some or all of the insurance savings before the expiry date of the insurance contract.

All insurance contracts involve an expense risk. This is the risk that the expense loading gained from insurance policies is insufficient to cover the operating expenses related to managing the insurance.

Major loss risk, or disaster risk, refers to situations where the company's life insurance business is exposed to major, but relatively rare, loss events. Major loss risk may also arise from risk concentrations where a certain insured group is subject to large-scale and collective loss events (for example, extreme weather phenomena such as heat or a pandemic).

Change risk is related to claims in the form of a pension, which occur in areas such as motor liability insurance and statutory accident insurance, and in which the amount of pension contribution to be paid may change.

C.2.3 Underwriting risk management

Insurance operations are based on assuming insurance risks, diversifying risks within the insurance portfolio and managing insurance risks. The most important instruments for managing underwriting risks are an appropriate risk selection, pricing, insurance terms and conditions, and the acquisition of reinsurance cover.

Risk selection provides guidance to sales and ensures the profitability of insurance operations. Risk selection is managed by statistically examining past loss events, which also serve as the basis for pricing. The risk selection guidelines define what types of risks can be insured and how large amounts of insurance are allowed.

The aim of insurance pricing is to achieve risk matching by setting a higher price for higher risks, and vice versa. The starting point for risk matching is the correctness and adequacy of the data repository, as well as the fact that the insured object and benefit are known and can be priced on market-consistent terms with sufficient accuracy. On this basis, appropriate risk analyses can be made and a decision can be made on an adequate insurance premium level and other insurance framework conditions.

The significance of insurance terms in limiting insurance risk is essential. The insurance terms and conditions define matters such as the coverage of the insurance contract and claims restrictions. In life insurance, legislation places limits on the insurance company's right to increase insurance premiums or

change the terms of the contract during the period of validity of the insurance. If the assumptions made prove to be insufficient, the benefits granted are too valuable from a financial market perspective and the premiums or terms are not changeable, a loss will be incurred. In insurance risk management, it is important that undesirable risks are excluded or contractually limited to the desired level.

Different quantitative methods are applied in the calculation of technical provisions. These methods play a key role in the management of technical provisions risk. Quantitative methods refer to the production of numerical estimates by applying statistical, economic, financial or other mathematical theories and methods. Quantitative methods can also refer to methods aiming at a numerical outcome and based partly or wholly on subjective expert judgement.

Quantitative methods always involve uncertainty, which can lead to underestimated and inadequate technical provisions. The risk management of quantitative methods focuses in particular on risks related to mathematical theory, data quality, estimation and parameterisation, documentation, validation and calculation processes. Data quality management is just as important as managing the structure, theory and logic of the method. Reliability can only be achieved with high-quality data.

Precautions are taken against major losses and loss events, and such events are managed by taking out reinsurance policies. The use of reinsurance is subject to ancillary risks, such as the appropriateness, availability, price and counterparty risks of reinsurance.

In the non-life insurance business, and in particular for large insurance risks, reinsurance cover must be obtained and the risk must not exceed the risk-taking capacity of the group. Reinsurance effectiveness and retention limits are assessed annually. The top risks contained in the insurance portfolio are identified and assessed through the processes maintained for this purpose.

The life insurance business has valid reinsurance contracts for disaster losses. Individual life and disability insurance policies are reinsured in case of major losses, and quotient reinsurance is used for serious illness cover. In the case of employee group life insurance, reinsurance is arranged through an industry-wide pool arrangement.

C.2.4 Underwriting risk assessment

C.2.4.1 Fennia Group's underwriting risk assessment

The solvency capital requirement for Fennia Group's underwriting risks was EUR 175.5 million (EUR 150.6 million). Taking diversification benefits into account, the underwriting risk's contribution was EUR 104.1 million (EUR 87.8 million), which is 16.6 per cent (15.9%) of the solvency capital requirement before loss-absorbing items.

The solvency capital requirement for underwriting risks consists of different risk areas as follows:

Solvency Capital Requirement for Underwriting Risk (EUR million)	31.12.2025	Contribution	Share	31.12.2024	Contribution	Share	Change
Premium risk	73.5	58.0	33.1%	67.9	54.8	36.4%	5.6
Technical provisions-, behaviour-, expense-, biometric risks	115.5	105.0	59.9%	94.0	84.0	55.8%	21.5
Catastrophe risk	28.7	12.4	7.1%	26.4	11.7	7.8%	2.2
Diversification	-42.3	-	-	-37.8	-	-	-4.5
Total Solvency Capital Requirement	175.5	175.5	100.0%	150.6	150.6	100.0%	24.9

The table shows an estimate of the change in Fennia Group's solvency position if the technical provisions' best estimate rises by one per cent.

Sensitivity analysis (EUR million)	31.12.2025	Scenario
		Technical provisions +1 %
Eligible own funds	994.4	950.5
Solvency Capital Requirement	571.5	585.7
Free capital	422.9	364.8
Change in free capital	-	-58.1
Relative solvency position	174.0%	162.3%

Both life and non-life insurance portfolios are relatively well diversified.

In non-life insurance, large risks are reinsured to limit risk concentrations on an individual basis. In addition, non-life insurance also includes reinsurance for disasters, which reduces the impact of potential risk concentrations.

In risk life insurance, reinsurance arrangements cover sums insured in excess of a certain euro amount, thereby limiting risk concentrations. In addition, reinsurance for disasters further reduces potential risk concentrations.

Fennia Group's insurance portfolio does not include significant unreinsured risk concentrations.

C.2.4.2 Fennia's underwriting risk assessment

The solvency capital requirement for Fennia's underwriting risks was EUR 120.4 million (EUR 118.8 million). Taking diversification benefits into account, the underwriting risk's contribution was EUR 66.5 million (EUR 64.7 million), which is 13.0 per cent (13.5%) of the solvency capital requirement before loss-absorbing items.

The solvency capital requirement for underwriting risks consists of different risk areas as follows:

Solvency Capital Requirement for Underwriting Risk (EUR million)							
	31.12.2025	Contribution	Share	31.12.2024	Contribution	Share	Change
Premium risk	73.5	65.2	54.2%	67.9	59.0	49.7%	5.6
Technical provisions-, behaviour-, expense-, biometric risks	54.1	43.6	36.2%	57.7	47.6	40.0%	-3.6
Catastrophe risk	24.7	11.6	9.6%	25.5	12.2	10.3%	-0.8
Diversification	-31.9	-	-	-32.3	-	-	0.4
Total Solvency Capital Requirement	120.4	120.4	100.0%	118.8	118.8	100.0%	1.6

The biggest impact on Fennia's underwriting risk stems from the pricing risk. Its contribution to the underwriting risk's solvency capital requirement was 54.2 per cent (49.7%). The relative share of the premium risk of premiums earned before the reinsurers' share was 15.5 per cent (15.3%).

The table shows an estimate of a change in the company's solvency position if the technical provisions' best estimate rises by one per cent.

Sensitivity analysis (EUR million)	31.12.2025	Scenario
		Technical provisions +1 %
Eligible own funds	956.2	950.1
Solvency Capital Requirement	464.9	465.1
Free capital	491.3	485.0
Change in free capital	-	-6.3
Relative solvency position	205.7%	204.3%

Fennia's insurance portfolio is relatively well diversified. In order to limit risk concentrations, Fennia reinsures large risks on an individual basis. Furthermore, Fennia has reinsurance policies for disasters, which reduces the impact of potential risk concentrations. Fennia's insurance portfolio does not include significant unreinsured risk concentrations.

C.2.4.3 Fennia Life's underwriting risk assessment

The solvency capital requirement for Fennia Life's underwriting risks was EUR 69 million (EUR 63.6 million). Taking diversification benefits into account, the underwriting risk's contribution was EUR 48.5 million (EUR 46.9 million), which is 34.3 per cent (38.7%) of the solvency capital requirement before loss-absorbing items.

The solvency capital requirement for underwriting risks consists of different risk areas as follows:

Solvency Capital Requirement for Insurance Risk (EUR million)							
	31.12.2025	Contribution	Share	31.12.2024	Contribution	Share	Change
Mortality risk	71	1.4	2.0%	6.8	1.2	1.9%	0.3
Longevity risk	6.2	2.0	2.9%	7.2	2.5	3.9%	-1.0
Disability-morbidity risk	1.4	0.3	0.5%	1.1	0.2	0.4%	0.3
Lapse risk	50.1	46.5	67.4%	46.3	43.0	67.6%	3.8
Life expense risk	20.4	15.3	22.2%	19.3	14.6	22.9%	1.1
Life catastrophe risk	8.6	3.5	5.1%	5.5	2.1	3.2%	3.1
Diversification	-24.9	-	-	-22.6	-	-	-2.3
Total Solvency Capital Requirement	69.0	69.0	100.0%	63.6	63.6	100.0%	5.3

Fennia Life's underwriting risk consists mainly of lapse and expense risk. Their contribution to the underwriting risk's solvency capital requirement was 89.5 per cent (90.5%). The relative share of underwriting risk of the technical provisions' best estimate before the reinsurers' share was 2.0 per cent (2.0%).

The table shows an estimate of a change in the company's solvency position if the technical provisions' best estimate rises by one per cent.

Sensitivity analysis (EUR million)	31.12.2025	Scenario
		Technical provisions +1 %
Eligible own funds	246.1	218.1
Solvency Capital Requirement	126.6	132.1
Free capital	119.5	86.0
Change in free capital	-----	-33.5
Relative solvency position	194.4%	165.1%

Fennia Life's insurance portfolio is relatively well diversified. In risk life insurance, reinsurance arrangements cover sums insured in excess of a certain euro amount, thereby limiting risk concentrations. In addition, reinsurance for disasters further reduces potential risk concentrations. Fennia Life's insurance portfolio does not contain any significant risk concentrations.

The use of reinsurance is subject to ancillary risks, such as the appropriateness, availability, price and counterparty risks of reinsurance. The use of reinsurance in the life insurance business is limited and therefore focuses on a few counterparties.

C.3 Market risk

Market risk means impacts on the financial position due to changes in the market values of assets and liabilities, in particular impacts on the company's eligible own funds, income and solvency. The risk factors that have an impact are the interest rate, spread, equity, property, currency and concentration risk. In solvency calculation, both sides of the balance sheet are valued at market conditions, so changes in risk factors affect both assets and liabilities at the same time. Therefore, it is important to examine market risks from the perspective of the entire balance sheet.

Changes in market risk factors affect solvency through a change in both eligible own funds and in the solvency capital requirement. As market risks are realised, the company's eligible own funds shrink, which weakens the solvency position. Changes in assets and liabilities most often also affect the solvency capital requirement. When asset values fall, solvency capital requirements decrease, which dilutes the impact of falling market values on the solvency position. This is particularly significant when equity market risks are realised, as the symmetric equity adjustment also reduces the capital requirement as a rule.

The return on unit-linked life insurance contracts mainly consists of a management fee based on the amount of assets covered by the insurance contracts. Part of the management fee is charged from insurance contracts and part is received from funds covered by the insurance contracts as rebates. For example, when the value of shares decreases, this has an impact on the assets under management and, consequently, on future returns. This risk creates a capital requirement, but its share of the total capital requirement for market risks is small. The solvency capital requirement arising from the unit-linked insurance portfolio is included in the solvency capital requirement figures presented.

C.3.1 Management of market risks

The general risk-taking capacity, risk appetite and business targets guide investment operations and create preconditions for them. In investment operations and market risk management, the objective is to attain the set business targets without endangering the solvency targets.

The cornerstones of market risk management are sufficient diversification of investments, the precautionary principle and risk mitigation techniques. Their aim is to ensure that assets are invested in such a way that they are as compatible as possible with the nature of the technical provisions, taking into account the predetermined risk appetite and risk-taking capacity as well as the prevailing business environment.

Market risks are managed by means such as investment restrictions and limits determined by the boards of directors. Allocation restrictions ensure that investment assets are sufficiently diversified and that investment assets are not overly exposed to any single market risk. In addition to asset class-specific allocation constraints, investment activities are guided by more detailed restrictions to ensure that diversification within asset classes is also high enough and that there are no oversized risk concentrations.

Compliance with the precautionary principles means, for example, that assets should only be invested in products and instruments with risks that can be identified, measured, monitored, managed and reported. If investments involve new asset classes or instruments, the investment decision must be preceded by a verification that such prudential processes have been completed.

In addition to adequate diversification and the precautionary principle, risk mitigation principles have also been defined. The risk mitigation techniques mean all arrangements with which a specific risk is transferred to another party are adjusted or eliminated either partly or fully. For market risks, risk mitigation techniques include the use of derivatives and various collateral and guarantee requirement arrangements. If the risk mitigation techniques do not meet the set requirements in terms of legality, risk identification, efficiency, risk monitoring and creditworthiness of the counterparty, they are not taken into account in the calculation of the solvency capital requirement. In this case, their hedging effect only applies to eligible own funds.

The market risks associated with the assets covering unit-linked insurance are passively managed, and no specific market views or hedging strategies are applied to the risk positions.

C.3.2 Market risk assessment

C.3.2.1 Fennia Group's assessment of market risks

Exposures to market risks and their effects are measured by asset class allocation and the solvency capital requirement caused by each market risk, as well as through sensitivity analysis.

The asset class allocation at market value describes how much of the balance sheet is exposed to each market risk. The allocation must be calculated based on the look-through approach for funds.

Asset class allocation can be supported through a sensitivity analysis, which estimates how much different market movements affect the value of assets and liabilities, and through that, the value of the company's eligible own funds. This leads to the analysis of the risk position of the entire balance sheet, which provides more information about the market risks and their impacts. In addition, the above-mentioned analyses are supplemented with their own view of the capital requirements caused by market risks (own risk and solvency assessment).

The sensitivity analysis included an examination of the impact of the materialisation of all market risks (excluding concentration risk) on the solvency position. The scenarios used are: a decline in interest rate swap rates of 50 basis points or 0.5 percentage points, a decline in the value of shares of 20%, a decline in the value of real estate of 20%, an increase in interest margins of 100 basis points or 1.0 percentage points, and a decline in exchange rates of 10%.

Sensitivity analyses provide a good assessment of how different market risk scenarios affect the solvency position. The sensitivity calculations have been conducted for each risk area. In the equity scenario, the symmetric adjustment of equity risk is reassessed after the shock, and its impact is taken into account in the solvency capital requirement calculation. In interest rates, the quotation of interest rate swaps is reduced by the impact of the shock until the 20-year maturity period, after which the discount curve is recalculated as set out in the regulation. In all scenarios, the market values of the investments are reassessed after the scenario from the perspective of both the market value and the solvency capital requirement.

Fennia Group's investments were divided into different asset classes as follows:

Asset class (EUR million)	31.12.2025				31.12.2024			
	Investment		Unit-linked investment		Investment		Unit-linked investment	
	Market value	Share	Market value	Share	Market value	Share	Market value	Share
Fixed income investments	1,351.2	62.8 %	1,695.8	38.9%	1,456.6	64.7%	1,049.2	37.0%
Equity investments	450.5	20.9 %	2,580.8	59.2%	459.8	20.4%	1,750.6	61.7%
Real estate investments	322.9	15.0 %	5.9	0.1%	316.1	14.1%	0.0	0.0%
Other	27.8	1.3 %	80.4	1.8%	17.2	0.8%	35.8	1.3%
Total	2,152.4	100.0 %	4,363.0	100.0%	2,249.8	100.0%	2,835.6	100.0%

The solvency capital requirement for market risks was EUR 460.2 million (EUR 418.3 million). Taking diversification benefits into account, the market risks' contribution was EUR 435.2 million (EUR 399.2 million), which is 69.2 per cent (72.5%) of the solvency capital requirement before loss-absorbing items.

The solvency capital requirement for market risks consists of different risk areas as follows:

Solvency Capital Requirement for Market Risk (EUR million)	31.12.2025	Contribution	Share	31.12.2024	Contribution	Share	Change
Interest rate risk	26.7	3.2	0.7%	29.6	4.3	1.0%	-2.9
Equity risk	327.8	312.5	67.9%	278.7	261.7	62.6%	49.1
Property risk	54.7	42.4	9.2%	53.3	41.0	9.8%	1.4
Spread risk	54.1	41.9	9.1%	57.9	44.9	10.7%	-3.8
Currency risk	117.2	59.4	12.9%	122.3	66.4	15.9%	-5.1
Concentration risk	18.7	0.8	0.2%	3.9	0.0	0.0%	14.7
Diversification	-139.0	-	-	-127.5	-	-	-11.5
Total Solvency Capital Requirement	460.2	460.2	100.0 %	418.3	418.3	100.0%	41.9

The contribution of the equity risk to the market risks' solvency capital requirement was clearly the greatest, at 67.9 per cent (62.6%). The next largest contributions were for currency risk, spread risk and property risk. The contribution of the open interest rate risk was 0.7 per cent (1.0%) of the solvency capital requirement for Fennia Group's market risks.

In the sensitivity analysis, the biggest negative impact on Fennia Group's solvency position comes from a scenario in which the spread increases. The widening of spreads by 100 basis points reduces the company's eligible own funds by EUR 35.8 million and results in a decline of 8.0 percentage points in Fennia Group's relative solvency position.

A 20 per cent decline in the value of real estate reduces the company's eligible own funds by EUR 46.6 million and causes the relative solvency position to weaken by 5.5 percentage points.

A decline of 50 basis points in interest rates reduces its eligible own funds by EUR 15.0 million, and the relative solvency position declines by 2.7 percentage points. The interest rate risk resulting from technical provisions was hedged using interest rate swaps. This hedging was also taken into account when calculating the solvency capital requirement.

A 10 per cent decline in exchange rates reduces the eligible own funds by EUR 23.7 million, but also reduces the solvency capital requirement by EUR 8.2 million. This results in a 1.7 percentage point decrease in the relative solvency position of Fennia Group.

A 20 per cent decline in the value of equities reduces the company's eligible own funds by EUR 65.7 million but also decreases the solvency capital requirement by EUR 106.4 million, thus causing the relative solvency position to improve by 25.7 percentage points. The symmetric equity adjustment reacts to a decline in the value of equities by reducing the solvency capital requirement. In addition, equity hedging derivatives provide a buffer to the decline in eligible own funds.

Should all the above-mentioned scenarios occur simultaneously, the impact on Fennia Group's eligible own funds would be EUR -182.8 million, the impact on the solvency capital requirement would be EUR -107.7 million, and the impact on free capital would be EUR -75.1 million. This would increase the relative solvency position by 1.0 percentage points to 175.0%.

Sensitivity analysis (EUR million)	31.12.2025	Scenario					
		Interest rate -50 bp	Equity -20%	Property -20%	Spread + 100 bp	Currency -10%	Combined scenario
Eligible own funds	994.4	979.4	928.7	947.8	958.6	970.7	811.6
Solvency Capital Requirement	571.5	571.7	465.1	562.4	577.6	563.3	463.8
Free capital	422.9	407.7	463.6	385.4	381.0	407.4	347.8
Change in free capital	-	-15.2	40.7	-37.5	-41.9	-15.5	-75.1
Relative solvency position	174.0%	171.3%	199.7%	168.5%	166.0%	172.3%	175.0%

C.3.2.2 Assessment of Fennia's market risks

Fennia's investments were divided into different asset classes as follows:

Asset class (EUR million)	31.12.2025		31.12.2024	
	Market value	Share	Market value	Share
Fixed income investments	771.4	42.0%	927.3	47.7%
Equity investments	695.2	37.9%	676.8	34.8%
Real estate investments	348.3	19.0%	326.7	16.8%
Other	19.6	1.1%	12.9	0.7%
Total	1,834.5	100.0%	1,943.6	100.0%

The high allocation of equity investments is largely due to ownership of Fennia Life Insurance Company. Its share of the investment assets was 13.4 per cent (11.3%). The allocation of other equity investments was 24.5 per cent (23.5%).

The solvency capital requirement for market risks was EUR 421.5 million (EUR 402.2 million). Taking diversification benefits into account, the market risks' contribution was EUR 404.0 million (EUR 388.2 million), which is 79.0 per cent (80.7%) of the solvency capital requirement before loss-absorbing items.

The solvency capital requirement for market risks consists of different risk areas as follows:

Solvency Capital Requirement for Market Risk (EUR million)	31.12.2025	Contribution	Share	31.12.2024	Contribution	Share	Change
Interest rate risk	15.7	1.5	0.4%	18.9	2.1	0.5%	-3.1
Equity risk	322.3	309.9	73.5%	298.1	284.6	70.7%	24.3
Property risk	48.8	38.1	9.0%	43.9	34.0	8.4%	4.9
Spread risk	29.3	22.2	5.3%	36.5	27.9	6.9%	-7.2
Currency risk	97.4	46.6	11.0%	102.5	51.4	12.8%	-5.0
Concentration risk	36.7	3.2	0.8%	30.6	2.3	0.6%	6.1
Diversification	-128.7	-	-	-128.1	-	-	-0.6
Total Solvency Capital Requirement	421.5	421.5	100.0%	402.2	402.2	100.0%	19.3

The contribution of the equity risk to the market risks' solvency capital requirement was clearly the greatest, at 73.5 per cent (70.7%). The next largest contributions were for currency risk, property risk and spread risk. The contribution of the open interest rate risk was 0.4 per cent (0.5%) of the solvency capital requirement for Fennia's market risks.

In the sensitivity analysis, the biggest impact on Fennia's solvency position comes from a scenario in which the real estate values decrease. A 20 per cent decline in the value of real estate reduces the company's eligible own funds by EUR 41.5 million and causes the relative solvency position to weaken by 8.1 percentage points.

The widening of spreads by 100 basis points reduces the company's eligible own funds by EUR 29.4 million and results in a decline of 7.6 percentage points in Fennia's relative solvency position.

A 10 per cent decline in exchange rates reduces the company's eligible own funds by EUR 22.8 million and causes the relative solvency position to decrease by 4.0 percentage points.

A decline of 50 basis points in interest rates reduces the company's eligible own funds by EUR 12.9 million, and the relative solvency position declines by 1.2 percentage points. The interest rate risk resulting from technical provisions was hedged using interest rate swaps. This hedging was also taken into account when calculating the solvency capital requirement.

A 20 per cent decline in the value of equities reduces the company's eligible own funds by EUR 103.7 million but also decreases the solvency capital requirement by EUR 80.7 million, causing the relative solvency position to improve by 16.2 percentage points. The symmetric equity adjustment reacts to a decline in the value of equities by reducing the solvency capital requirement. In addition, equity hedging derivatives provide a buffer to the decline in eligible own funds.

Should all the above-mentioned scenarios occur simultaneously, the impact on Fennia's eligible own funds would be EUR -206.3 million, the impact on free capital would be EUR -127.5 million, and the relative solvency position would fall by 11.5 percentage points to 194.2 per cent.

Sensitivity analysis (EUR million)	31.12.2025	Scenario					
		Interest rate -50 bp	Equity -20%	Property -20%	Spread + 100 bp	Currency -10%	Combined scenario
Eligible own funds	956.2	943.3	852.4	914.7	926.8	933.4	749.9
Solvency Capital Requirement	464.9	461.2	384.2	462.9	468.0	462.8	386.1
Free capital	491.3	482.1	468.2	451.8	458.8	470.6	363.8
Change in free capital	-	-9.2	-23.0	-39.4	-32.5	-20.7	-127.5
Relative solvency position	205.7%	204.5%	221.9%	197.6%	198.0%	201.7%	194.2%

C.3.2.3 Assessment of Fennia Life's market risks

Fennia Life's investments were divided into different asset classes as follows:

Asset class (EUR million)	31.12.2025				31.12.2024			
	Investment		Unit-linked investment		Investment		Unit-linked investment	
	Market value	Share	Market value	Share	Market value	Share	Market value	Share
Fixed income investments	473.8	84.1%	1,279.6	40.1%	565.3	98.7%	1,049.2	37.0%
Equity investments	84.5	15.0%	1,828.6	57.4%	2.2	0.4%	1,750.6	61.7%
Real estate investments	1.3	0.2%	0.0	0.0%	0.8	0.1%	0.0	0.0%
Other	4.1	0.7%	80.2	2.5%	4.3	0.7%	35.8	1.3%
Total	563.7	100.0%	3,188.4	100.0%	572.6	100.0%	2,835.6	100.0%

The solvency capital requirement for market risks was EUR 97.3 million (EUR 78.5 million). Taking diversification benefits into account, the market risks' contribution was EUR 83.7 million (EUR 65.3 million), which is 59.2 per cent (53.8%) of the solvency capital requirement before loss-absorbing items.

The solvency capital requirement for market risks consists of different risk areas as follows:

Solvency Capital Requirement for Market Risk (EUR million)	31.12.2025	Contribution	Share	31.12.2024	Contribution	Share	Change
Interest rate risk	4.9	3.6	3.7%	11.2	8.4	10.7%	-6.3
Equity risk	75.0	56.0	57.5%	51.0	38.4	48.9%	24.0
Property risk	0.0	0.0	0.0%	0.1	0.1	0.1%	-0.1
Spread risk	18.1	13.5	13.9%	22.1	16.6	21.1%	-4.0
Currency risk	18.8	14.1	14.4%	20.0	15.0	19.2%	-1.2
Concentration risk	13.6	10.2	10.4%	0.0	0.0	0.0%	13.6
Diversification	-33.1	-	-	-25.9	-	-	-7.2
Total Solvency Capital Requirement	97.3	97.3	100.0%	78.5	78.5	100.0%	18.9

The contribution of the equity risk to the market risks' solvency capital requirement was largest, at 57.5 per cent (48.9%). The next largest contribution was for spread risk.

In the sensitivity analysis, the greatest negative impact on Fennia Life's solvency position comes from a scenario in which interest rates fall. A decline of 50 basis points in interest rates reduces the company's eligible own funds by EUR 13.7 million, and the relative solvency position declines by 13.5 percentage points.

The interest rate risk resulting from technical provisions was hedged using interest rate swaps. This hedging was also taken into account when calculating the solvency capital requirement.

The widening of spreads by 100 basis points reduces the company's eligible own funds by EUR 11.1 million and results in a decline of 9.4 percentage points in Fennia Life's relative solvency position.

A 20 per cent decline in the value of real estate does not affect Fennia Life's solvency position, as it has no real estate holdings.

A 10 per cent decline in exchange rates increases the company's eligible own funds by EUR 0.0 million and causes Fennia Life's relative solvency position to increase by 7.1 percentage points.

A 20 per cent decline in the value of equities reduces the company's eligible own funds by EUR 13.5 million but also decreases the solvency capital requirement by EUR 22.7 million, causing the relative solvency position to improve by 29.5 percentage points. The symmetric equity adjustment reacts to a decline in the value of equities by reducing the solvency capital requirement.

Should all the above-mentioned scenarios occur simultaneously, the impact on Fennia Life's eligible own funds would be EUR -38.3 million, the impact on free capital would be EUR -11.0 million, and the relative solvency position would increase by 15.0 percentage points to 209.3 per cent.

Sensitivity analysis (EUR million)	31.12.2025	Scenario					
		Interest rate -50 bp	Equity -20%	Property -20%	Spread + 100 bp	Currency -10%	Combined scenario
Eligible own funds	246.1	232.4	232.5	246.1	235.0	246.1	207.8
Solvency Capital Requirement	126.6	128.5	103.9	126.6	127.1	122.2	99.3
Free capital	119.5	103.9	128.6	119.5	107.9	123.9	108.5
Change in free capital	-	-15.6	9.2	0.0	-11.5	4.5	-11.0
Relative solvency position	194.4%	180.8%	223.8%	194.4%	184.9%	201.4%	209.3%

C.3.3 Interest rate risk

Interest rate risk refers to changes in eligible own funds and solvency position caused by fluctuations in interest rates. There is interest rate risk associated with technical provisions. To manage it, a large part of the investment assets should be invested in fixed-income instruments. The decision of how much should be invested in fixed income investments, meaning how much interest rate risk should be borne, is one of the most important decisions in market risk management and investment activities. At Fennia Group, this decision is made as part of the asset-liability management process, with the goal of selecting the most efficient risk allocation possible in terms of the equity's risk-return ratio.

Changes in interest rates affect the market value of assets and liabilities. If the market-consistent changes in the value of fixed-income investments and technical provisions differ significantly from each other as the interest rate level changes, eligible own funds are subject to interest rate risk. In such a case, when the interest rate level changes, the change in the value of the assets does not fully compensate for the change in the value of the technical provisions, which affects solvency by either weakening or improving it.

Interest rate risk is managed and monitored by means such as fixed-income investments and the cash flow analysis of technical provisions. The better the cash flows of fixed-income investments and technical provisions match, the less interest rate risk will result from the position. Matching duration and amount alone does not eliminate interest rate risk.

In solvency calculation, the capital requirement arising from a decrease in the interest rate level does not arise at all from those points in the interest rate curve where the interest rate is negative. To the extent that the interest rate curve is above zero, the decreasing interest rate level will result in a lower solvency capital requirement for interest rate risk.

The prudential framework uses a zero-coupon rate curve determined by the European Insurance and Occupational Pensions Authority (EIOPA) to discount the cash flows of technical provisions. This differs from the market-consistent interest rate curve, in particular after 20 years of maturity, which is why the fully market-consistent value of technical provisions and therefore eligible own funds differs from the value used in regulatory accounting. If the market-consistent yield curve were used to define the relative solvency position, the impact on the solvency position would be strengthening. Fennia Group primarily uses the market-consistent value of technical provisions in decision making related to asset-liability management.

The zero-coupon curve defined by EIOPA and the market-consistent zero-coupon curve are shown below.

C.3.3.1 Fennia Group's interest rate risk

The fixed income investments in Fennia Group's investment assets amounted to EUR 1,351.2 million (EUR 1,456.6 million). This represents 62.8 per cent (64.7%) of Fennia Group's total investment assets.

Fennia Group's fixed income investments were allocated to different classes as follows:

Allocation of fixed income investments 31.12.2025 (EUR million)	Investment			Unit-linked investment		
	Market value	Share	Duration	Market value	Share	Duration
Money and deposits	91.5	6.8%	0.0	97.2	5.7%	0.0
Money market funds	0.5	0.0%	-	0.0	0.0%	-
Government bonds	255.8	18.9%	10.5	0.0	0.0%	0.0
Investment grade corporate bonds	722.1	53.4%	1.7	839.8	49.5%	5.4
High-yield corporate bonds	137.4	10.2%	1.8	227.8	13.4%	3.5
Covered bonds	0.1	0.0%	6.8	0.0	0.0%	0.0

Bond funds	0.5	0.0%	-	0.0	0.0%	-
Other fixed income investments	4.5	0.3%	5.2	360.4	34.3%	4.8
Total	1,456.6	100.0%	5.7	1,049.2	100.0%	3.9
Best estimate of technical provisions	1,214.9	-	10.2	2,804.8	-	8.4

The solvency capital requirement for Fennia Group's interest rate risk was EUR 26.7 million (EUR 29.6 million), and the contribution to the market risks' solvency capital requirement was EUR 3.2 million (EUR 4.3 million). The interest rate risk's share of the market risks' solvency capital requirement was 0.7 per cent (1.0%).

The table below illustrates the impacts of switching to a market-consistent yield curve on Fennia Group's solvency position.

Sensitivity analysis (EUR million)	31.12.2025	Scenario
		Market curve
Eligible own funds	994.4	996.7
Solvency Capital Requirement	571.5	569.6
Free capital	422.9	427.1
Change in free capital	-	4.2
Relative solvency position	174.0%	175.0%

The table presents the greatest counterparty concentrations in the investment assets from the interest rate risk perspective, measured at fair value.

Counterparty (EUR million)	Market value 31.12.2025	Share of investment
Republic of Germany	63.8	3.0%
French Republic	47.1	2.2%
Republic of Finland	40.7	1.9%
Federal Republic of U.S.	37.8	1.8%
Kingdom of the Netherlands	30.2	1.4%

C.3.3.2 Fennia's interest rate risk

The fixed income investments in Fennia's investment assets amounted to EUR 771.4 million (EUR 927.3 million). This represents 42.0 per cent (47.7%) of Fennia's total investment assets.

Fennia's fixed income investments were allocated to different classes as follows:

Allocation of fixed income investments (EUR million)	31.12.2025			31.12.2024		
	Market value	Share	Duration	Market value	Share	Duration
Money and deposits	52.5	6.8 %	0.0	47.7	5.1 %	0.0
Money market funds	0.4	0.1 %	-	0.3	0.0 %	-
Government bonds	144.7	18.8 %	11.1	164.6	17.7 %	11.6
Investment grade corporate bonds	343.7	44.6 %	1.7	376.2	40.6 %	2.0
High-yield corporate bonds	89.6	11.6 %	1.7	120.8	13.0 %	1.2
Covered bonds	0.1	0.0 %	6.8	0.2	0.0 %	5.2
Emerging market government bonds	13.4	1.7 %	6.2	28.0	3.0 %	6.0
Emerging market corporate bonds	42.4	5.5 %	2.6	45.3	4.9 %	2.7
Interest rate derivatives	-25.0	-3.2 %	4.7	11.4	1.2 %	9.9
Loans	108.2	14.0 %	0.6	130.5	14.1 %	0.7
Bond funds	0.3	0.0 %	-	0.4	0.0 %	-
Other fixed income investments	1.1	0.1 %	7.5	2.1	0.2 %	4.5
Total	771.4	100.0 %	3.9	927.3	100.0 %	5.9

Republic of Finland	14.5	2.6%
Federal Republic of U.S	12.3	2.2%
Kingdom of the Netherlands	9.5	1.7%

C.3.4 Spread risk

Interest rate investments are also intrinsically associated with interest rate spread risk. Investments in bonds result in exposure to changes in the issuer's interest margin. The risk may be realised when the markets assess that changes have taken place in the creditworthiness of a credit instrument issuer, which have a weakening impact on the market value of the bonds. In solvency capital requirement calculations, the capital requirement caused by an investment's spread risk is defined by the market value, duration and creditworthiness of the bonds.

C.3.4.1 Fennia Group's spread risk

The tables below illustrate Fennia Group's creditworthiness position.

The solvency capital requirement for Fennia Life's spread risk was EUR 18.1 million (EUR 22.1 million), and the contribution to the market risks' solvency capital requirement was EUR 13.5 million (EUR 16.6 million). The spread risk's share of the market risks' solvency capital requirement was 13.9 per cent (21.1%).

The investment assets' largest counterparty concentrations from the spread risk perspective at fair value are described in the interest rate risk section.

C.3.5 Equity risk

Equity risk is mainly caused by equity investments in the balance sheet. Equity risk is related to potential losses due to changes in the value of shares, as well as an adverse effect on the solvency position.

Some other asset classes are also classified as or comparable to equity risk in the solvency calculation. These are typically related to funds with high leverage or which cannot be subject to the look-through principle, as well as to individual investments under funds subject to the look-through principle for which sufficient information is not available for proper solvency calculation.

The equity risk of a well-diversified liquid equity portfolio can be effectively hedged with equity index options. Thanks to diversification, the basis risk, i.e. the risk that the prices of the general index underlying the option and the equity portfolio do not change in the same proportion, remains low.

C.3.5.1 Fennia Group's equity risk

Equity investments accounted for EUR 450.5 million (EUR 459.8 million) of Fennia Group's investment assets. This represents 20.9 per cent (20.4%) of Fennia Group's total investment assets.

The table below shows the allocation of Fennia Group's equity investments.

Allocation of equity investments (EUR million)	31.12.2025				31.12.2024			
	Investment		Unit-linked investment		Investment		Unit-linked investment	
	Market value	Share	Market value	Share	Market value	Share	Market value	Share

Other	2.7	65.3%	80.2	100.0%	4.3	93.9%	35.8	100.0%
Total	4.2	100.0%	80.2	100.0%	4.6	100.0%	35.8	100.0%

The solvency capital requirement for Fennia Life's equity risk was EUR 75.0 million (EUR 51.0 million), and the contribution to the market risks' solvency capital requirement was EUR 56.0 million (EUR 38.4 million). The equity risk's share of the market risks' solvency capital requirement was 57.5 per cent (48.9%).

The calculation of the solvency capital requirement for Fennia Life's equity risk does not apply the equity risk transitional measure.

The table presents the greatest counterparty concentrations in the investment assets from the equity risk perspective, measured at fair value.

Counterparty (EUR million)	Market value 31.12.2025	Share of investment
Fennia Life Insurance Ltd	83.2	14.8%
Tyvene Oy	1.3	0.2%
Fingrid Oyj, serie B	1.1	0.2%
Muzinich Funds/Ireland	0.5	0.1%
JPMorgan Funds SICAV	0.3	0.1%

Equity investments did not involve a high concentration risk, as the total amount of equity investments is small at Fennia Life.

C.3.6 Currency risk

Currency risk consists mostly of investments (non-euro-denominated investments). In the case of technical provisions, commitments for non-unit-linked insurance are denominated in euros, so they do not actually pose a currency risk. Unit-linked policies are subject to a currency risk to the extent that the assets covering them are denominated in a foreign currency. However, their share of the solvency capital requirement for currency risk is small.

The currency risk of investment assets can be hedged and managed using currency derivatives. The open currency position in a liquid investment portfolio must not exceed the maximum amount approved by the Board of Directors. As a rule, the hedge is applied to significant currencies. Small currency risks are generally considered to be unhedged because they are expensive to hedge or cannot be reasonably hedged at all, and because taking currency risk on those investments is often also based on an exchange rate view. Currency positions arising from a look-through of funds are not hedged. For the calculation of the solvency capital requirement for currency risk, the renewal assumption treatment is applied to currency derivatives.

C.3.6.1 Fennia Group's currency risk

The table below shows the currency position of Fennia Group's investments.

Currency position 31.12.2025 (EUR million)	EUR	USD	SEK	GBP	DKK	JPY	TWD	Other currencies	Open foreign exchange exposure
Investments	1,769.8	195.9	4.2	33.1	2.5	29.6	17.4	99.9	382.6
Currency derivatives	-	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Net investment position	1,769.8	195.9	4.2	33.1	2.5	29.6	17.4	99.9	382.6
Unit-linked investment	2,583.7	1,011.4	188.7	64.6	92.7	41.5	37.3	342.3	1,778.6
Net position	4,353.5	1,207.3	192.9	97.7	95.2	71.1	54.7	442.2	2,161.2

Currency position 31.12.2024 (EUR million)	EUR	USD	SEK	GBP	DKK	INR	CHF	Other currencies	Open foreign exchange exposure
Investments	1,808.3	282.8	5.5	30.3	5.0	16.5	16.6	85.7	442.4
Currency derivatives	-	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Net investment position	1,808.3	282.8	5.5	30.3	5.0	16.5	16.6	85.7	442.4
Unit-linked investment	1,636.4	598.3	228.9	60.0	78.5	271	26.2	180.0	1,199.1
Net position	3,444.7	881.1	234.5	90.3	83.5	43.6	42.8	265.8	1,641.5

The solvency capital requirement for Fennia Group's currency risk was EUR 117.2 million (EUR 122.3 million), and the contribution to the market risks' solvency capital requirement was EUR 59.4 million (EUR 66.4 million). The currency risk's share of the market risks' solvency capital requirement was 12.9 per cent (15.9%).

C.3.6.2 Fennia's currency risk

The table below shows the currency position of Fennia's investments.

Currency position 31.12.2025 (EUR million)	EUR	USD	GBP	JPY	HKD	TWD	CHF	Other currencies	Open foreign exchange exposure
Investments	1,475.4	178.0	32.9	29.6	17.8	17.4	16.6	66.9	359.1
Currency derivatives	-	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Net investment position	1,475.4	178.0	32.9	29.6	17.8	17.4	16.6	66.9	359.1

Currency position 31.12.2024 (EUR million)	EUR	USD	GBP	CHF	INR	HKD	TWD	Other currencies	Open foreign exchange exposure
Investments	1,530.9	264.2	29.9	16.6	15.8	13.5	13.5	59.3	412.7
Currency derivatives	-	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Net investment position	1,530.9	264.2	29.9	16.6	15.8	13.5	13.5	59.3	412.7

The solvency capital requirement for Fennia's currency risk was EUR 97.4 million (EUR 102.5 million), and the contribution to the market risks' solvency capital requirement was EUR 46.6 million (EUR 51.4 million). The currency risk's share of the market risks' solvency capital requirement was 11.0 per cent (12.8%).

C.3.6.3 Fennia Life's currency risk

The table below shows the currency position of Fennia Life's investments.

Currency position 31.12.2025 (EUR million)	EUR	USD	SEK	DKK	GBP	CNY	JPY	Other currencies	Open foreign exchange exposure
Investments	544.4	16.3	0.1	0.0	0.2	0.2	0.0	2.5	19.3
Currency derivatives	-	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Net investment position	544.4	16.3	0.1	0.0	0.2	0.2	0.0	2.5	19.3
Unit-linked investment	1,829.7	606.9	189.6	74.5	65.2	45.3	41.6	334.8	1,358.0

Currency position 31.12.2024 (EUR million)	EUR	USD	SEK	DKK	GBP	NOK	CNY	Other currencies	Open foreign exchange exposure
Investments	543.8	18.6	0.1	0.0	0.4	0.0	0.6	9.2	28.9
Currency derivatives	-	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Net investment position	543.8	18.6	0.1	0.0	0.4	0.0	0.6	9.2	28.9
Unit-linked investment	1,636.4	598.3	228.9	78.5	60.0	36.6	33.3	163.4	1,199.1
Net position	2,180.2	616.9	229.0	78.5	60.4	36.6	34.0	172.6	1,228.0

The solvency capital requirement for Fennia Life's currency risk was EUR 18.8 million (EUR 20.0 million), and the contribution to the market risks' solvency capital requirement was EUR 14.1 million (EUR 15.0 million). The currency risk's share of the market risks' solvency capital requirement was 14.4 per cent (19.2%).

C.3.7 Property risk

Property risk is related to the effects of changes in property values on eligible own funds and solvency position.

Fennia Group has a significant real estate portfolio, consisting mainly of Finnish direct real estate investments. In addition to direct real estate investments, investments have also been made in real estate funds and real estate companies. Since the solvency capital requirement calculation requires the classification of investments based on their actual risk, some real estate investments have been treated as equity risk or interest rate and spread risk in the solvency capital requirement calculation.

Property risk may materialise as a decrease in the values of real estate or as a decrease in the cash flows of real estate, i.e. rents. In general, a decrease in cash flows is followed by a decrease in value, as real estate is valued based on future cash flows. The value of real estate may also decrease as a result of a decrease in the general price level.

Real estate investments are illiquid by nature and there are no liquid derivatives to hedge them, so the risk management of real estate investments focuses on careful investment analysis, portfolio formation and sufficient diversification. In real estate investments, the Helsinki Metropolitan Area and growth centres are

favoured, as they present lower risks. In addition, diversification is sought through different types of real estate with different demand-supply dynamics and with downward and upward cycles caused by different factors. We also avoid focusing too much on individual sectors or uses.

On average, real estate investments in investment assets are larger than individual equity or fixed-income investments. Because of this, real estate investments are often among the largest risk concentrations. However, direct real estate investments have higher thresholds than other asset classes, so direct real estate investments do not give rise to a risk concentration capital requirement in the same way in the solvency calculation.

C.3.7.1 Fennia Group's property risk

Real estate investments accounted for EUR 383.9 million (EUR 316.1 million) of Fennia Group's investment assets. This represents 17.0 per cent (14.1%) of Fennia Group's total investment assets.

The table presents the allocation of Fennia Group's real estate investments.

Allocation of real estate investments (EUR million)	31.12.2025				31.12.2024			
	Investment		Unit-linked investment		Investment		Unit-linked investment	
	Market value	Share	Market value	Share	Market value	Share	Market value	Share
Direct real estate investments	218.7	67.7%	0.0	-	213.7	67.6%	0.0	-
Joint ventures for real estate investments	31.9	9.9%	0.0	-	38.8	12.3%	0.0	-
Real estate funds	72.3	22.4%	0.0	-	63.7	20.1%	0.0	-
Total	322.9	100.0%	0.0	-	316.1	100.0%	0.0	-

The charts below show Fennia Group's real estate asset distribution both geographically and by purpose.

The solvency capital requirement for Fennia Group's property risk was EUR 54.7 million (EUR 53.3 million), and the contribution to the market risks' solvency capital requirement was EUR 42.4 million (EUR 41.0 million). The property risk's share of the market risks' solvency capital requirement was 9.2 per cent (9.8%).

The table presents the greatest counterparty concentrations in the investment assets from the property risk perspective, measured at fair value.

Counterparty (EUR million)	Market value 31.12.2025	Share of investment
Hämeenkatu 4, Tampere	52.1	2.4%
Pasilan Portit Ky	51.3	2.4%
Kiinteistö Oy Kyllikinportti 2	50.9	2.4%
Kiinteistö Oy Tampereen Rautatiekatu 21	19.4	0.9%
Kiinteistö Oy Fabianinkatu 8	16.6	0.8%

C.3.7.2 Fennia's property risk

Real estate investments accounted for EUR 375.5 million (EUR 326.7 million) of Fennia's investment assets. This represents 20.9 per cent (16.8%) of Fennia's total investment assets.

The table presents the allocation of Fennia's real estate investments.

Allocation of real estate investments (EUR million)	31.12.2025		31.12.2024	
	Market value	Share	Market value	Share
Direct real estate investments	195.1	56.0%	175.6	53.7%
Joint ventures for real estate investments	89.2	25.6%	87.4	26.8%
Real estate funds	63.9	18.4%	63.7	19.5%
Total	348.3	100.0%	326.7	100.0%

The charts below show Fennia's real estate asset distribution both geographically and by purpose.

The solvency capital requirement for Fennia's property risk was EUR 48.8 million (EUR 43.9 million), and the contribution to the market risks' solvency capital requirement was EUR 38.1 million (EUR 34.0 million). The property risk's share of the market risks' solvency capital requirement was 9.0 per cent (8.4%).

The table presents the greatest counterparty concentrations in the investment assets from the property risk perspective, measured at fair value.

Counterparty (EUR million)	Market value 31.12.2025	Share of investment
Hämeenkatu 4, Tampere	52.1	2.8%
Pasilan Portit Ky	51.3	2.8%
Kiinteistö Oy Kyllikinportti 2	42.5	2.3%
Kiinteistö Oy Fabianinkatu 8	16.6	0.9%
Kiinteistö Oy Tampereen Rautatienkatu 21	5.6	0.3%

C.3.7.3 Fennia Life's property risk

Real estate investments accounted for EUR 0.0 million (EUR 0.8 million) of Fennia Life's investment assets. This represents 0.0 per cent (0.1%) of Fennia Life's total investment assets.

The table presents the allocation of Fennia Life's real estate investments.

Allocation of real estate investments (EUR million)	31.12.2025				31.12.2024			
	Investment		Unit-linked investment		Investment		Unit-linked investment	
	Market value	Share	Market value	Share	Market value	Share	Market value	Share
Direct real estate investments	0.0	0.0%	0.0	-	0.8	99.7%	0.0	-
Joint ventures for real estate investments	1.3	100.0%	0.0	-	0.0	0.3%	0.0	-
Real estate funds	0.0	0.0%	0.0	-	0.0	0.0%	0.0	-
Total	1.3	100.0%	0.0	-	0.8	100.0%	0.0	-

The charts below show Fennia Life's real estate asset distribution both geographically and by purpose.

The solvency capital requirement for Fennia Life's property risk was EUR 0.0 million (EUR 0.1 million), and the contribution to the market risks' solvency capital requirement was EUR 0.0 million (EUR 0.1 million). The property risk's share of the market risks' solvency capital requirement was 0.0 per cent (0.1%).

C.3.8 Risk concentrations

Investment assets also give rise to a solvency capital requirement when too large a share of the investment portfolio is invested in equity, bonds or other investment instruments of the same issuer. In this case, a payment default, bankruptcy, change in creditworthiness or other adverse event for one of the issuers may cause an unreasonably large impact on Fennia Group's own funds. Adequate diversification of investments ensures that there is no concentration risk, in which case the impact of one issuer on the overall position will also be small.

The solvency capital requirement for concentration risk is materially influenced by the creditworthiness of the issuer, so it is important to monitor creditworthiness as part of the management of concentration risk. This has been taken into account, among other things, when drawing up issuer-specific limits, as well as euro limits to the size of individual investments.

In real estate investments, the threshold limits for solvency capital requirement exposures are higher than in other investments, so even if the concentrations in direct real estate are high in absolute terms, they do not necessarily give rise to a solvency capital requirement.

C.3.8.1 Fennia Group's risk concentrations

The table presents the greatest counterparty concentrations in Fennia Group's investment assets from the concentration risk perspective, measured at fair value.

Counterparty (EUR million)	Market value 31.12.2025	Share of investment
Republic of Germany	63.8	3.0%
S-Pankki Oyj	56.3	2.6%
Hämeenkatu 4, Tampere	52.1	2.4%
Pasilan Portit Ky	51.3	2.4%
Kiinteistö Oy Kyllikinportti 2	50.9	2.4%

The solvency capital requirement for Fennia Group's concentration risk was EUR 18.7 million (EUR 3.9 million), and the contribution to the market risks' solvency capital requirement was EUR 0.8 million (EUR 0.04 million). The concentration risk's share of the market risks' solvency capital requirement was 0.2 per cent (0.01%).

C.3.8.2 Fennia's risk concentrations

The table presents the greatest counterparty concentrations in Fennia's investment assets from the concentration risk perspective, measured at fair value.

Counterparty (EUR million)	Market value 31.12.2025	Share of investment
Fennia Life Insurance Company Ltd.	246.1	13.4%
S-Pankki Oyj	56.3	3.1%
Hämeenkatu 4, Tampere	52.1	2.8%
Pasilan Portit Ky	51.3	2.8%
Kiinteistö Oy Kyllikinportti 2	42.5	2.3%

The solvency capital requirement for Fennia's concentration risk was EUR 36.7 million (EUR 30.6 million), and the contribution to the market risks' solvency capital requirement was EUR 3.2 million (EUR 2.3 million). The concentration risk's share of the market risks' solvency capital requirement was 0.8 per cent (0.6%).

C.3.8.3 Fennia Life's risk concentrations

The table presents the greatest counterparty concentrations in Fennia Life's investment assets from the concentration risk perspective, measured at fair value.

Counterparty (EUR million)	Market value 31.12.2025	Share of investment
Fennia Life Insurance Ltd	83.2	14.8%
Republic of Germany	19.0	3.4%
French Republic	14.8	2.6%
Republic of Finland	14.5	2.6%
Federal Republic of U.S	12.3	2.2%

The solvency capital requirement for Fennia Life's concentration risk was EUR 13.6 million (EUR 0.0 million), and the contribution to the market risks' solvency capital requirement was EUR 10.2 million (EUR 0.0 million). The concentration risk's share of the market risks' solvency capital requirement was 10.4 per cent (0.0%).

C.4 Credit risk

Credit risk, i.e. counterparty risk, is the risk that the other party to the agreement is unable to meet their obligations. In the case of investments, the counterparty risk must be distinguished from the spread risk, where the deterioration in the creditworthiness of the counterparty or the issuer causes a decrease in the market value and thereby a change in eligible own funds. Widening or rising of the interest margin is the first symptom of an increase in counterparty risk, but counterparty risk will only materialise in the event of insolvency. The widening of the spread does not necessarily ever lead to the materialisation of counterparty risk.

In addition to investments, counterparty risk arises from arrangements such as reinsurance contracts. It is possible that the counterparty to the reinsurance contract will be unable to meet its obligations.

C.4.1 Credit risk management

As with market risks, a prerequisite for managing counterparty risks is to ensure that the counterparties and related risks can be identified and measured, and that they can be managed, monitored and reported.

In order to limit counterparty risk, a minimum level of creditworthiness has been set. In addition, collateral arrangements and limits on the maximum amount of open exposure per counterparty have been established.

C.4.2 Credit risk assessment

C.4.2.1 Fennia Group's credit risk assessment

The solvency capital requirement for Fennia Group's counterparty risk was EUR 66.7 million (EUR 45.6 million), and the contribution to the total solvency capital requirement before loss-absorbing items was EUR 31.2 million (EUR 20.4 million). The counterparty risk's share of the solvency capital requirement before loss-absorbing items was 5.0 per cent (3.7%).

In Fennia Group's solvency calculations, the counterparty risk mostly resulted from reinsurance contracts, cash assets, derivative contract counterparties (less the loss-absorbing effect of collateral arrangements), off-balance-sheet commitments and receivables from insurance customers.

The table below shows the largest risk concentrations of Fennia Group's counterparty credit risk.

Counterparty 31.12.2025 (EUR million)	Open exposure
Danske Bank A/S	54.9
Fabian 8	33.0
Nordea Bank Abp	22.3
CHICAGO BOARD OPTIONS EXCHANGE	19.0
EUREX DEUTSCHLAND	17.4

C.4.2.2 Fennia's credit risk assessment

The solvency capital requirement for Fennia's counterparty risk was EUR 58.4 million (EUR 34.7 million), and the contribution to the total solvency capital requirement before loss-absorbing items was EUR 26.6 million (EUR 14.6 million). The counterparty risk's share of the solvency capital requirement before loss-absorbing items was 5.2 per cent (3.0%).

In Fennia's solvency calculations, the counterparty risk mostly resulted from reinsurance contracts, cash assets, derivative contract counterparties (less the loss-absorbing effect of collateral arrangements), off-balance-sheet commitments and receivables from insurance customers.

The table below shows the largest risk concentrations of Fennia's counterparty risk.

Counterparty 31.12.2025 (EUR million)	Open exposure
Danske Bank A/S	34.2
Fabian 8	33.0
CHICAGO BOARD OPTIONS EXCHANGE	18.5
EUREX DEUTSCHLAND	16.9
Leasing and rent liabilities	16.8

C.4.2.3 Fennia Life's credit risk assessment

The solvency capital requirement for Fennia Life's counterparty risk was EUR 10.4 million (EUR 10.6 million), and the contribution to the total solvency capital requirement before loss-absorbing items was EUR 4.0 million (EUR 4.2 million). The counterparty risk's share of the solvency capital requirement before loss-absorbing items was 2.8 per cent (3.5%).

In Fennia Life's solvency calculations, the counterparty risk mostly resulted from reinsurance contracts, cash assets, derivative contract counterparties (less the loss-absorbing effect of collateral arrangements), off-balance-sheet commitments and receivables from insurance customers.

The table below shows the largest risk concentrations of Fennia Life's counterparty risk.

Counterparty 31.12.2025 (EUR million)	Open exposure
Danske Bank A/S	17.5
Alisa Bank Plc	13.2
UB Omaisuuudenhoito	9.8
Nordea Bank Abp	9.1
Taaleritehdas	8.5

C.5 Liquidity risk

Liquidity risk refers to the risk of the company being unable to meet its payment obligations on time. This may be due to the fact that the liquidation of assets or investments is too slow, the cost of liquidation is considerable, or that liquidation cannot be carried out at all. Liquidity risk may also arise from the fact that, due to weak market liquidity, the risk position cannot be adjusted quickly enough if the market situation or the solvency situation so requires.

Fennia Group is exposed to liquidity risk through investment assets and reinsurance contracts. Liquidity risk is related to the liquidation situations of investment assets and the collateral requirements of derivatives in situations where the value of the underlying assets of derivatives develops unfavourably. Liquidity risk in reinsurance contracts refers to situations where it is not possible to obtain reinsurance on reasonable terms.

Liquidity risk is also affected by the expected profit included in future premiums. The calculation of the technical provisions for the solvency calculation is based on future cash flows, which in certain respects also take into account future premiums and the expected gains or losses arising from them. The expected profit or loss included in future premiums is a calculated estimate of the difference between the amount of technical provisions with and without future premiums. Profit reduces the technical provisions, in which case its effect on own funds will be positive, reducing the long-term liquidity risk.

C.5.1 Liquidity risk management

Liquidity risk management is divided into the management of long-term and short-term liquidity risk. The long-term time horizon is several years, even decades, and is related to the temporal matching of cash flows of assets and liabilities. It is not directly managed as a separate risk, but its management is combined with market-consistent valuation and the comprehensive management of interest rate risk.

The short-term liquidity risk has a time horizon of four months and the resulting risk is managed by asset class-specific restrictions, internal asset class limits and other regular monitoring, as well as investment policy. Methods related to liquidity management include the minimum allocation set for money market investments,

the management of the liquidation of investments, the determination and adequate diversification of counterparty limits, the limitation of the amount of illiquid investments, the monitoring of the collateral requirement for derivatives, and the management of reinsurance contracts.

C.5.2 Liquidity risk assessment

Liquidity risk does not cause a capital requirement in the solvency calculation according to the standard formula, but it can be of great importance, especially in adverse market situations. The management of liquidity risk therefore requires special scrutiny to ensure that the risks do not materialise.

Short-term liquidity risk and the liquidation of investments are most affected by the amount of illiquid investments in investment assets, which must be considered before the look-through principle for funds, meaning so-called direct investments. Real estate investments, private equity funds, unquoted shares and certain unrated loans are illiquid in nature and it is difficult to liquidate them quickly without affecting the market price.

Although the liquidity of an investment asset is good under normal market conditions, it may not remain good in crisis scenarios. Some corporate bond investments are such that their realisation becomes significantly more difficult as market conditions become significantly weaker. A similar risk also exists in alternative investments, although the strategies for that segment have also been designed to be as liquid as possible. Equity investments, on the other hand, are quite liquid even in a bad market situation, mainly because the size of individual investments is quite small. The equity portfolio can also be effectively hedged with liquid derivatives, which allows for a rapid reduction of market risk. Equity derivatives can also be used to hedge the highest-risk bond investments or even real estate investments in bad market conditions.

C.5.2.1 Fennia Group's liquidity risk assessment

The combined market value of illiquid investments in Fennia Group was EUR 580.1 million (EUR 535.9 million), and their share of the total investment assets' direct investments was 27.3 per cent (23.2%). Of the investment assets' direct investments, 58.1 per cent (63.3%) can be liquidated during the same day in normal market conditions, 72.2 per cent (76.2%) within a week, and 72.7 per cent (76.8%) in less than a month.

Liquidity 31.12.2025 (EUR million)	Interest rate investments	Equity investments	Property investments	Equity funds	Alternative investments	Total	Share
Realization during the same day	821.0	412.5	0.0	0.0	0.0	1,233.5	58.1%
Realization over 1 day but less than 5 days	300.2	0.0	0.0	0.0	0.0	300.2	14.1%
Realization over 5 days but less than 1 month	11.0	0.0	0.0	0.0	0.0	11.0	0.5%
Realization over 1 month	84.8	72.4	384.5	371	1.3	580.1	27.3%
Total	1,217.0	484.9	384.5	371	1.3	2,124.7	100.0%

Liquidity 31.12.2024 (EUR million)	Interest rate investments	Equity investments	Property investments	Equity funds	Alternative investments	Total	Share
Realization during the same day	1,074.8	391.2	0.0	0.0	-0.5	1,465.5	63.3%
Realization over 1 day but less than 5 days	298.0	1.3	0.0	0.0	0.0	299.3	12.9%
Realization over 5 days but less than 1 month	10.5	3.6	0.0	0.0	0.0	14.1	0.6%
Realization over 1 month	98.2	19.2	370.9	45.6	2.1	535.9	23.2%
Total	1,481.5	415.3	370.9	45.6	1.6	2,314.9	100.0%

Long-term liquidity risk describes the future cash flows of the investment assets and technical provisions and their difference.

The cash flows of assets and liabilities differ significantly over time, so Fennia Group is exposed to considerable reinvestment risk.

Expected profits included in future insurance premiums amounted to EUR 224.0 million (EUR 202.7 million).

C.5.2.2 Fennia's liquidity risk assessment

The combined market value of illiquid investments at Fennia was EUR 678.9 million (EUR 682.9 million), and their share of the total investment assets' direct investments was 38.6 per cent (36.2%). Of the remaining investment assets' direct investments, 52.5 per cent (55.5%) can be liquidated during the same day in normal market conditions, 60.8 per cent (63.1%) within a week, and 61.4 per cent (63.8%) in less than a month.

Liquidity 31.12.2025 (EUR million)	Interest rate investments	Equity investments	Property investments	Equity funds	Alternative investments	Total	Share
Realization during the same day	510.7	412.5	0.0	0.0	0.0	923.2	52.5%
Realization over 1 day but less than 5 days	146.8	0.0	0.0	0.0	0.0	146.8	8.3%
Realization over 5 days but less than 1 month	9.7	0.0	0.0	0.0	0.0	9.7	0.6%
Realization over 1 month	80.2	178.6	383.3	36.7	0.2	678.9	38.6%
Total	747.4	591.1	383.3	36.7	0.2	1,758.6	100.0%

Liquidity 31.12.2024 (EUR million)	Interest rate investments	Equity investments	Property investments	Equity funds	Alternative investments	Total	Share
Realization during the same day	656.1	391.2	0.0	0.0	-0.5	1,046.8	55.5%

Total	579.4	0.0	0.8	2.3	1.1	583.5	100.0%

Long-term liquidity risk describes the future cash flows of the investment assets and technical provisions and their difference.

The cash flows of assets and liabilities differ significantly over time, so Fennia Life is exposed to considerable reinvestment risk.

Expected profits included in future insurance premiums amounted to EUR 60.6 million (EUR 61.2 million).

C.6 Operational risk

Operational risk management is part of Fennia Group's comprehensive risk management. Operational risks at Fennia Group refer to risks arising from internal processes, personnel, systems and external factors. Thus, operational risks and their management concern all employees of Fennia Group.

The objective of operational risk management in Fennia Group is to:

- simultaneously ensure efficient and high-quality processes
- reduce, in a cost-effective manner, the likelihood that risks are realised and the impacts of the realised risks, i.e. to reduce the losses resulting from risks
- support business and support functions to achieve the targets set for them using risk management
- for their part, help ensure that the Group's operations meet the requirements set for them by the authorities and legislation
- ensure the continuity of the business operations under exceptional circumstances, including the outsourced functions.

C.6.1 Operational risk management

Operational risk management at Fennia Group is guided by the Operational Risk Management Principles approved by the boards of directors of the companies, which are part of the Risk Management Principles. The principles define matters such as the roles and responsibilities related to operational risk management, as well as the Group's operational risk management process. In addition to these principles, Fennia Group also has several other principles and guidelines related to certain categories of operational risks, such as the principles of preventing money laundering and terrorist financing, the data security principles, the user authorisation management guidelines, and the data protection and information security guidelines for employees of Fennia's partners.

At Fennia Group, responsibilities related to the management, control, monitoring and reporting of operational risks are determined in accordance with the principles of the three-defence-line model. In accordance with the three-defence-line model, business and support functions are primarily responsible for managing and monitoring operational risks. The Group's risk management function supports and monitors the business and support functions in this work, develops the risk management process and related tools, and produces operational risk reporting.

Fennia Group's operational risk management process covers the identification, evaluation, management, monitoring and reporting of risks. The core of the process is based on regular risk charting organised in the business and support functions, including the identification of risks, assessment based on probability and impact, determination of controls and the appointment of responsible persons. Risks are reported to the management and boards of directors of the Group. The identification of operational risks also covers compliance risks.

Part of Fennia Group's operational risk management is continuity management, the key factors of which are the group's preparedness plan, ICT continuity plan, function-specific continuity and contingency plans and system recovery plans, as well as the related testing/training. Ensuring the continuity of operations is also taken into account in agreements and in collaboration with external service providers.

Each employee of Fennia Group has the opportunity and obligation to report materialised risks and near misses they have detected through the reporting system used in the group. The system is used to collect risk information from across the organisation, which can be used in the development of operations.

Below are the key operational risk exposures identified in Fennia Group:

1. misconduct risks
2. personnel-related risks
3. ICT risks
4. model risks
5. compliance risks (including data protection risks)
6. project risks
7. process risks
8. risks associated with third parties.

C.6.2 Compliance risk

In Fennia Group, compliance risk refers to the risks associated with legal or administrative consequences, financial losses or reputational damage resulting from the company's failure to comply with external regulation, its own internal guidelines or appropriate procedures in customer relationships. Compliance risks are managed as part of operational risk management.

At Fennia Group, the management of compliance risk is guided by the compliance principles confirmed by the Board of Directors and the risk appetite policy.

The Board-defined level of risk appetite for compliance risks is low. The principles of compliance define the organisation, objectives, tasks, processes and procedures of the compliance function of the companies belonging to Fennia Group, as well as the principles of reporting. In accordance with the principles, the key principle of the management of compliance risk is for the Group companies to observe the enacted laws, decrees, administrative regulations, self-regulation in the finance sector, as well as the Group's internal guidelines in their operations, and to adhere to the signed agreements and appropriate procedures in customer relationships and otherwise. In the risk appetite policy confirmed by the Board of Directors, the risk appetite for compliance risk is defined as low.

In Fennia Group's risk management system, compliance risk is part of the operational risk, and Fennia Group's operating models for the management of operational risks are applied to the identification, measurement, monitoring, management and reporting of compliance risk.

Compliance risks are regularly mapped as part of operational risk mappings. Compliance risks and near misses realised in the organisation are reported to the operational risk reporting system. In addition, the compliance function implements the compliance programme that ensures that business operations comply with regulations, and carries this out by implementing the control plan confirmed by the boards of directors and ad hoc controls where necessary. The function also maintains the guidelines framework, coordinates the monitoring of regulation and monitors the progress of procedures required by new regulation in the organisation. Compliance also maintains the whistleblowing channel established for the Fennia Group companies for reporting suspected misconduct.

C.6.3 Data protection risk

Data protection risk refers to the risks associated with legal or administrative penalties, financial losses or loss of reputation resulting from the company's non-compliance with legislation on the processing of personal data or failure to take appropriate measures to ensure a level of security appropriate to the risk. Data protection risk is part of operational risk. Data protection risk is part of Fennia Group's risk management process. Data protection risk is identified as part of operational risk mapping. In addition, in order to maintain data security and prevent processing in violation of the provisions of data protection regulation, the controller must assess the risks associated with the processing and take measures to mitigate these risks.

The risk-based approach referred to in the General Data Protection Regulation is applied in the planning of the processing of personal data. The importance of risk identification is particularly emphasised when the controller determines technical and organisational measures to ensure the implementation of data protection in the processing of personal data. With regard to personal data, data protection risk management also focuses on the risks posed to the data subjects.

C.6.4 Operational risk assessment

C.6.4.1 Fennia Group's operational risk assessment

The solvency capital requirement for Fennia Group's operational risks and the contribution to the total solvency capital requirement before loss-absorbing items was EUR 23.9 million (EUR 18.0 million). Its share of the solvency capital requirement before loss-absorbing items was 3.8 per cent (3.3%).

In 2025, the operational risk assessments were primarily conducted in April–September. and covered Fennia and Fennia Life.

C.6.4.2 Fennia's operational risk assessment

The solvency capital requirement for Fennia's operational risks and the contribution to the total solvency capital requirement before loss-absorbing items was EUR 14.2 million (EUR 13.3 million). Its share of the solvency capital requirement before loss-absorbing items was 2.8 per cent (2.8%).

For Fennia, significant identified operational risks were related to matters such as competence and key persons, information systems and their development, data protection, the management and quality of data, non-compliance with external regulation and customer service processes.

The materialised risks related to Fennia were especially related to deviations observed in processes, data protection and ICT risks.

C.6.4.3 Fennia Life's operational risk assessment

The solvency capital requirement for Fennia Life's operational risks and the contribution to the total solvency capital requirement before loss-absorbing items were EUR 5.3 million (EUR 4.9 million). Its share of the solvency capital requirement before loss-absorbing items was 3.7 per cent (4.0%).

For Fennia Life, significant operational risks were related to matters such as business processes, taking Fennia Life into consideration in Group-level decision-making, key personnel risk, the functioning and information security of key information and telecommunications systems, as well as data protection.

The realised risks concerning Fennia Life were, among other things, related to data protection, ICT risks and various errors in processes.

C.7 Other material risks

Fennia Group and companies belonging to Fennia Group are also subject to other risks that are not taken into account in solvency capital requirement calculations. They are usually difficult or even impossible to measure. These risks include risks linked to the strategy and business environment, risk linked to acquiring additional capital, reputation risk, group risks, sustainability risks such as direct and indirect risks caused by climate change, as well as entirely new types of risk that are difficult to identify, let alone assess in advance.

C.7.1 Risks related to strategy and business environment

Risks related to the strategy and business environment may originate from within Fennia Group or from outside it. The strategic risk within Fennia Group may materialise if the business operations of Fennia Group or one of the Group's companies are not properly steered, or the chosen strategy is wrong for the competitive situation, prevailing legislation or market conditions. Such cases may lead to Fennia Group or an individual company within the Group losing its market position, or its profitability and solvency position may deteriorate significantly. From the outside, business can be exposed to risks, which are often political in nature or related to political decision-making. Some examples of this type of risk are changes in the tax benefits of insurance contracts or any other legislative amendment that considerably alters the business environment and Fennia Group's or an individual company's ability to function in it. The consequences are the same as with strategic risks resulting from the Group's own operations.

The starting point for managing business risks is to identify the risks related to the business or business model of Fennia Group and each company in the group. It is necessary to observe various weak signals and to assess how different events, trends and scenarios will affect the sustainability of operations and the development of the financial condition in both the short and long term. These business risks are assessed annually in connection with the strategy process.

C.7.2 Additional capital acquisition risk

If the solvency situation deteriorates significantly, the only way to correct the solvency position may be to seek external capital. The additional capital acquisition risk may materialise if, when seeking new capital, it is either unavailable or its cost is much higher than anticipated. If additional capital is unavailable in a situation such as this, it may jeopardise Fennia Group's or a Group company's continuity. Too expensive capital, in turn, may jeopardise the profitability of Fennia Group or a company belonging to the Group and its ability to generate added value.

C.7.3 Reputation risk

Reputation risk refers to a risk of damage to the Fennia brand or to the public image of an individual company belonging to or being merged with Fennia Group. Reputation risk can also be caused by the actions of partners if their values or operating principles differ from those of Fennia Group.

A good reputation is an essential part of the insurance business and the business of the entire Fennia Group. Without a good reputation, working with stakeholders can become difficult. It is difficult to regain trust after a loss of reputation, so Fennia Group must, in all its operations, act towards all its customers in a fair manner that inspires trust and with high moral values, and provide high-quality and secure services to minimise reputation risk.

Reputation risk is not managed as a separate risk area but is taken into account in all risk categories. When the risks affecting reputation have been identified, various risk management measures can be implemented within the organisation. Reputation risks are best prevented by working professionally and following the agreed principles and guidelines. Clear, transparent and well-considered internal and external communication plays an important role in the management of materialised reputation effects.

C.7.4 Group risks

Fennia Group and individual companies belonging to the Group are also exposed to Group risk. Group risks refer to risks arising from Fennia and its subsidiaries operating in the form of a consolidated group.

This may include risks such as:

- Transaction risks are related to intra-group transactions, such as appropriate pricing.
- Contagion risks include situations where problems or risks taken by one company are transmitted to other companies in the Group or the whole Group. This area also includes moral hazard risks, which refer to situations where an intentional and immoral risk taken by one company, as well as the resulting loss, is partly or entirely borne by the parent company or the other companies.
- Conflict of interest risks arise if the interests of some companies in the Group or the Group as a whole are in conflict with each other.
- Concentration risks arise if an individual counterparty becomes too significant at the group level, even if the risk is within the permitted limits for individual companies.
- Governance-related risks may arise due to the fact that some activities are organised at the Group level and some activities at the individual company level. Differences in corporate system of governances may create coordination challenges and additional risks.

Group risk management is based on the fact that the internal control system of the entire Group, in particular the risk management system and compliance control, as well as the related reporting procedures, has been defined and implemented in a consistent and transparent manner. The roles and responsibilities of the various parties must be clear and defined from the perspective of both Fennia Group companies and the Group.

C.7.5 Sustainability risks

Sustainability risk refers to an event or circumstance related to the environment (E), society (S) or governance (G) that, if realised, may have a negative impact either on Fennia Group's operations or investment values. The identification and assessment of sustainability risks, including the direct and indirect risks caused by climate change, is part of Fennia Group's risk management system, and such risks are taken into consideration in both investment and insurance operations. Sustainability risks are treated as cross-cutting risks within Fennia Group and can be linked to several risk classifications. Fennia Group has identified that risks related to climate change may affect the group's risk profile in the longer term. With climate change, physical risks in particular, such as storms and floods, can cause consequences such as an increase in compensation costs. Transition risks will also be considered, including such matters as changes in regulation, technological developments and market shifts towards a low-carbon society, that may have impacts on the group's business and investment activities.

Sustainability risks are identified in the Group's risk management and the businesses' regular risk charting processes. Sustainability risk assessment is part of Fennia Group's Own Risk and Solvency Assessment. The assessment takes into account sustainability risks and climate-related risks in particular, and the impacts on insurance and investment activities have been assessed using various scenarios. The assessment takes into account the short- and long-term impacts of climate change on the Group's risk profile, capital needs and solvency. The scenario work supports strategic decision-making and preparedness.

Sustainability risks are also regularly assessed in the update of the double materiality assessment required by the Corporate Sustainability Reporting Directive (CSRD; ESRS). This aims to ensure a consistent overall view of the state of sustainability risks affecting operations financially and to maintain an up-to-date view of the impact of sustainability factors on Fennia Group's operations.

Sustainability risks are monitored internally through regular reports. Sustainability risks are managed through practical measures such as the development of principles guiding the group's operations, risk selection and pricing, and the strengthening of operational processes. In addition, sustainability risks are partly managed in processes in accordance with the human rights due diligence obligation, the aim of which is to ensure that the operations do not cause adverse impacts to stakeholders and that Fennia Group is not participating or contributing to adverse impacts.

Fennia Group takes into account the sustainability risks arising from the investments and their effects on investment returns and solvency in different ways. Quarterly charting of investment assets with different responsibility indicators is part of the regular risk charting process. A more extensive charting and analysis of climate risks is also regularly carried out.

Sustainability risks are managed by diversifying investments extensively so that the risks faced by individual companies do not become significant from the point of view of Fennia's or Fennia Life's investment assets. In addition to diversification, sustainability risks are managed through operating methods aligned with Fennia Group's responsible investment principles, such as integrating ESG factors into investment decision-making, defining investment exclusions and influencing investee companies.

C.8 Any other information

There is no other material information about Fennia Group's, Fennia's or Fennia Life's risk profile.

D. Valuation for solvency purposes

The valuation principles of the solvency calculation are based on the IFRS standard and solvency regulation. The objective is to determine fair value in accordance with the market consistent valuation principle. The most significant differences between the equity in accordance with the financial statements and the own funds in accordance with the solvency calculation stem from the valuation difference of investment assets, the valuation of technical provisions and the treatment of the equalisation provision.

D.1 Assets

Assets are categorised in classes for solvency purposes as required by regulation. The classification is based on the nature and risk classification of the assets.

The fair value of investment instruments is determined on the basis of quoted active market prices. Instruments are valued at the purchase price, or the last trading price if the purchase price is not available or the price source exchange employs an auction procedure. If there is no public quotation for the investment instrument as a whole, but there is a functioning market for its components, the fair value is determined on the basis of the market prices of the components. If the market is not functioning or the security in question is not quoted, fair value is determined using valuation methods generally accepted in the market. If it is not possible to determine the fair value of a financial asset, the acquisition cost is considered to be a sufficiently close estimate of the fair value. The amount of such assets in the Group's balance sheet is insignificant.

No changes have been made to the valuation principles or criteria during the reporting period. Uncertainties related to forward-looking assumptions and estimate-based conclusions are mainly related to the assessment of the fair values of real estate.

D.1.1 Fennia Group assets

The table below presents Fennia Group's assets in the solvency calculation and in the financial statements.

Investments (EUR million)	31.12.2025			31.12.2024

Total investment	578.4	553.9	24.5	575.1	553.8	21.3

D.1.4 Valuation of assets for solvency calculation purposes compared to valuation in the financial statements

D.1.4.1 Intangible and tangible assets

In the financial statements, intangible and tangible assets are presented in terms of the acquisition cost reduced by depreciation in accordance with the plan. Write-downs are recorded if there are indications that the value of such assets is impaired.

In solvency calculation, the value of goodwill and other long-term expenses is zero, as they have no market value. In solvency calculation, the valuation of tangible assets according to the financial statements, i.e. the carrying amount, is considered a reasonable estimate of the fair value.

D.1.4.2 Real estate and real estate shares

Buildings and structures are presented in the balance sheet of the financial statements at the lower of acquisition cost reduced by the planned depreciation or current value. Real estate shares and land are presented at the lower of acquisition cost or current value. The same fair values are used in the financial statements as in the solvency calculation, and the fair values are presented as a note to the financial statements.

In solvency calculation, real estate investments are valued at fair value. The fair values of real estate properties are estimated using a return value method based on future returns and market-based revenue expectations. The starting point of the assessment is real estate-specific characteristics regarding factors such as the location, condition and rental situation of the real estate, as well as market-based comparison data regarding alternative rents and return requirement levels. An external property valuer has annually participated in the

evaluation for the most significant real estate properties, and the rest of the evaluation has been carried out using the Group's own expertise.

D.1.4.3 Stocks and shares

Stocks and shares are presented in the balance sheet of the financial statements at the lower of acquisition cost or current value. In solvency calculation, these investments are valued at fair value. Fair values are presented as a note to the financial statements.

The fair value of quoted securities, as well as securities for which there is a market, is defined as the latest available continuous trading rate of the year or, in the absence thereof, the latest available trading rate.

The fair value of unquoted securities is defined as the probable sale price, the remaining acquisition cost or the net asset value. The fair value of private equity fund units is defined as the estimate of the fund's fair value provided by the management company.

D.1.4.4 Bonds

Bonds are presented in the balance sheet of the financial statements at acquisition cost. The acquisition cost is calculated using the average price. The difference between the nominal value and the cost of the bonds is divided into interest income or a reduction in interest income over the life of the financial market instrument. Balancing items are marked as increases or decreases in the acquisition cost. Changes in value due to interest rate fluctuations are not recognised. Impairments related to the issuer's creditworthiness are recognised in the result.

In solvency calculation, bonds are valued at fair value. Fair values are presented as a note to the financial statements. For solvency purposes, accrued interest relating to investments is included in the fair value of the asset in question. In the balance sheet, the accrued interest on investments is included in the Group receivables.

D.1.4.5 Loans

In the financial statements, customer loans are valued at their nominal value. In solvency calculation, loans are valued in market-consistent terms.

D.1.4.6 Derivatives

A negative difference between the fair value and the higher carrying amount of an unhedged derivative contract is recognised as an expense in the financial statements. Unrealised gains are not recognised. Interest rate derivatives are used to hedge the interest rate risk of market-consistent technical provisions against future value changes in accordance with the Group's risk management. In accounting terms, these interest rate derivatives are treated as hedging instruments.

When hedge accounting is used, the negative change in the value of derivatives is not recognised as an expense to the extent that it is hedged by the change in the value of the hedged item and provided that the hedge is effective. However, if the negative change in the value of hedging interest rate derivatives exceeds the positive change in the value of the hedged market-based technical provisions, the excess is recorded in the impairment of the investments.

Interest on interest rate derivatives is recorded as income and expenses for the financial year on the basis of the agreement. The gain or loss from the closing of hedging interest rate derivatives is amortised over

the maturity of each derivative contract. The non-periodised balances of gains and losses recognised in the balance sheet of closed derivatives are not taken into account in the solvency calculation balance sheet.

In solvency calculation, derivative contracts are valued at fair value. The fair values of derivative contracts are determined on the basis of the market quotations of the contracts or, in their absence, on the basis of cash flow forecasts derived from market instruments and a risk-free interest rate derived from market instruments. Fair values are presented as a note to the financial statements.

D.1.4.7 Loan receivables

Loan receivables are presented in the balance sheet at nominal value, or at a permanently lower probable value. In solvency calculation, customer loans are valued on market terms (mark-to-model valuation).

The valuation model is based on three key factors. Cash flows are forecasted for the future, taking into account the nature of the loan and the repayment period. Cash flows are discounted at an interest rate that takes into account a risk-free interest rate derived from the market and a risk premium reflecting the counterparty's credit rating.

D.1.4.8 Cash and deposits

Cash and deposits are presented in the balance sheet at nominal value. Accrued interest on deposits is recognised as an asset in the financial statements. There is no difference in valuation between the solvency calculation and the financial statements.

D.1.4.9 Insurance premium receivables and other receivables

Premium receivables are recognised in the balance sheet at their probable value, and other receivables at their nominal value or at a permanently lower probable value. Receivables that, on the basis of experience from previous years, are likely to expire have been deducted from the par value of premium receivables, resulting in their probable value. A receivable that is unlikely to be settled is recognised as a credit loss. In solvency calculation, only overdue receivables from policyholders are counted as premium receivables. The valuation of other receivables in accordance with the financial statements is considered a reasonable estimate of the fair value, and other receivables are valued in the solvency calculation at the book value according to the financial statements.

D.1.4.10 Assets covering unit-linked insurance

Assets covering unit-linked insurance are measured at fair value in both the financial statements and the solvency calculation.

D.1.4.11 Deferred tax receivables

Deferred tax receivables arising from periodisation differences between accounting and taxation are entered in the annual accounts of the Group companies and in the consolidated financial statements up to the probable amount of taxable income that will be generated in the future, against which they can be booked. Due to their uncertainty, special care is taken when recognising deferred tax assets. Deferred taxes are calculated according to the confirmed rate of tax on the date of closing the accounts. Deferred tax receivables arising from differences between the valuation principles for solvency calculation and financial statements are not entered in solvency calculation.

D.2 Technical provisions

In calculating solvency, the best estimate of the technical provisions calculated from insurance contracts is the expected current value of future cash flows related to the current insurance portfolio. Future cash flows from insurance contracts will be discounted using the zero-coupon swap curve established by the European Insurance and Occupational Pensions Authority (EIOPA). Technical provisions are determined as the sum of the best estimate and the risk margin. The risk margin is calculated using the cost of capital method, assuming a cost of capital of 6%.

Determining future cash flows requires not only the information related to the contracts of the current insurance portfolio, but also different assumptions regarding the life and behaviour of the insured. Such assumptions include, but are not limited to, assumptions about mortality, disability intensity, surrenders, retirement time, new payments, insurance savings investments, additional benefits and operating expenses necessary for insurance management.

D.2.1 Fennia Group's technical provisions

As Fennia Group has no internal reinsurance arrangements, Fennia Group's technical provisions consist of the combined technical provisions of Fennia, Fennia Life and Fennia Life Insurance in both the financial statements and the solvency calculation.

Fennia Group's technical provisions according to the financial statements before outwards reinsurance amounted to EUR 6,042.6 million (EUR 4,603.8 million), and technical provisions according to the solvency calculation before outwards reinsurance amounted to EUR 5,509.2 million (EUR 4,047.4 million).

The technical provisions in outwards reinsurance in the financial statements totalled EUR 17.6 million (EUR 12.0 million) and in solvency calculation, EUR 10.1 million (EUR 6.2 million).

D.2.2 Fennia's technical provisions

The technical provisions in accordance with Fennia's financial statements consisted of the provision for unearned premiums of EUR 180.4 (EUR 164.7 million), claims outstanding of EUR 997.9 million (EUR 1,040.9 million), and the equalisation provision of EUR 111.7 million (EUR 109.7 million), and its total amount before outwards reinsurance was EUR 1,290.0 million (EUR 1,315.3 million).

The technical provisions according to solvency calculation before outwards reinsurance amounted to EUR 788.7 million (EUR 870.6 million), of which the share of the best estimate was EUR 759.3 million (EUR 834.7 million), and the risk margin amounted to EUR 29.5 million (EUR 35.9 million). Of the best estimate, the share of the provision for unearned premiums was EUR -13.9 million (EUR 5.1 million), and claims outstanding were EUR 773.1 million (EUR 829.6 million).

The technical provisions in outwards reinsurance in the financial statements totalled EUR 17.5 million (EUR 12.0 million) and in solvency calculation, EUR 13.0 million (EUR 8.8 million).

The table below shows the division of technical provisions, in accordance with solvency calculation, into the best estimate and risk margin by insurance line. The figures are before outwards reinsurance activities, meaning the figures do not take into account the cash flows related to outwards reinsurance contracts.

Line of business (EUR million)	31.12.2025			31.12.2024		
	Best estimate	Risk margin	Technical provisions	Best estimate	Risk margin	Technical provisions
Medical expense insurance and proportional reinsurance	32.8	2.2	35.1	35.3	2.7	38.0
Income protection insurance and proportional reinsurance	0.8	0.3	1.1	0.5	0.3	0.8
Workers' compensation insurance and proportional reinsurance	18.0	5.1	23.1	10.1	5.7	15.8
Motor vehicle liability insurance and proportional reinsurance	30.2	3.0	33.2	32.8	3.5	36.2
Other motor insurance and proportional reinsurance	42.3	3.6	45.9	47.5	4.0	51.5
Marine, aviation and transport insurance and proportional reinsurance	2.7	0.6	3.3	2.5	0.8	3.3
Fire and other damage to property insurance and proportional reinsurance	23.7	4.4	28.2	39.3	5.4	44.7
General liability insurance and proportional reinsurance	40.1	2.6	42.7	41.5	3.1	44.6
Credit and suretyship insurance and proportional reinsurance	1.7	0.3	2.0	0.4	0.1	0.5
Legal expenses insurance and proportional reinsurance	10.3	0.5	10.9	10.7	0.6	11.3
Assistance and proportional reinsurance	0.0	0.0	0.0	0.0	0.0	0.0
Miscellaneous financial loss insurance and proportional reinsurance	-2.2	0.7	-1.5	0.0	0.8	0.8
Non-proportional health reinsurance	0.0	0.0	0.0	0.0	0.0	0.0
Non-proportional casualty reinsurance	0.0	0.0	0.0	0.0	0.0	0.0
Non-proportional marine, aviation and transport reinsurance	0.0	0.0	0.0	0.0	0.0	0.0
Non-proportional property reinsurance	0.0	0.0	0.0	0.0	0.0	0.0
Annuities stemming from non-life insurance contracts and relating to health insurance obligations	349.3	4.3	353.6	385.0	6.2	391.3
Annuities stemming from non-life insurance contracts and relating to insurance obligations other than health insurance obligations	209.5	1.8	211.2	229.3	2.6	231.9
Total	759.3	29.5	788.7	834.7	35.9	870.6

In solvency calculation, the cash flows of the best estimate of technical provisions have been determined using a simulation technique. In terms of mortality and disability, Fennia's assumptions are based on studies and analyses carried out in the insurance industry. In other respects, the assumptions used in the calculation of technical provisions are based on the behavioural history of the company's own insurance portfolio and the current insurance management method. The market-based technical provisions are calculated per insurance contract, and the total technical provisions are determined as their sum.

Uncertainty about the level of technical provisions arises from factors such as the following:

- The total loss estimates for losses with case-by-case provisions are estimates of the total amount of losses and will be revised to the final total loss amounts as the losses are resolved. In particular, the assessment of future compensation payments in the form of pensions involves uncertainty regarding the development of remaining life spans.
- Provisions for unknown and known losses without case-by-case provisions are based on estimates of the amount and management of the losses derived from the loss history statistics.

- The amount of future compensation payments is affected by the development of expenses to be compensated from the lines of insurance. For example, in the case of motor vehicle damage, the development of repair costs or, in the case of medical expense insurance, the development of treatment measures and the prices of medication will affect the final amount of compensation. The magnitude of future inflation is always uncertain and also causes uncertainty for the assessment of future compensation payments.

The main differences in the criteria, methods and key assumptions used for the valuation of the technical provisions in accordance with the solvency calculation and financial statements are as follows:

- The discounting practices are different.
- In the financial statements, the collective method of determination is based on the traditional method calculated on the basis of the loss triangles.

The following factors also create differences between the valuation carried out by the company for solvency purposes and the valuation carried out by the company for financial statements:

- Due to the determination difference, the provision for unearned premiums in the financial statements amounted to EUR 180.4 million, and in the solvency calculation to EUR -13.9 million.
- Subrogation receivables relating to the confirmed pension capitals of workers' compensation and occupational disease insurance amounted to EUR 19.8 million, which are not offset from the technical provisions in the financial statements but are offset in the solvency technical provision calculation.
- The technical provisions for fully experience-rated patient insurance amounted to EUR 19.8 million in the financial statements, but in determining the solvency calculation technical provisions, indemnification and insurance premiums linked to this component of the technical provision offset each other in practice.
- There are differences in the concepts related to the expiry of contracts.
- There are differences in the calculation of the safety margins.

D.2.3 Fennia Life's technical provisions

The technical provisions according to Fennia Life's financial statements before outwards reinsurance amounted to EUR 3,622.5 million (EUR 3,288.5 million). It consisted, for savings-type insurance, of insurance savings of EUR 3,552.6 million (EUR 3,213.1 million,) and the supplementary provision for the guaranteed interest rate of EUR 56.3 million (EUR 63.3 million), totalling EUR 3,608.9 million (EUR 3,276.4 million). The share of unit-linked technical provisions amounted to EUR 3,189.9 million (EUR 2,835.2 million). Technical provisions for risk life insurance and other technical provisions amounted to EUR 13.6 million (EUR 12.1 million).

The technical provisions according to the solvency calculation before outwards reinsurance were EUR 3,492.4 million (EUR 3,176.8 million). It consisted of a best estimate of EUR 3,459.7 million (EUR 3,146.3 million) and a risk margin of EUR 32.7 million (EUR 30.5 million). The share of unit-linked technical provisions amounted to EUR 3,127.2 million (EUR 2,779.9 million). Technical provisions for risk life insurance amounted to EUR -36.2 million (EUR -41.2 million).

The technical provisions in outwards reinsurance in the financial statements totalled EUR 0.0 million (EUR 0.0 million) and in solvency calculation, EUR -2.0 million (EUR -2.6 million).

The table below shows the division of technical provisions, in accordance with solvency calculation, into the best estimate and risk margin by insurance line. The figures are before outwards reinsurance activities, meaning the figures do not take into account the cash flows related to outwards reinsurance contracts.

Line of business (EUR million)	31.12.2025			31.12.2024		
	Best estimate	Risk margin	Technical provisions	Best estimate	Risk margin	Technical provisions
Savings insurance						
Technical interest rate	7.1	0.0	7.1	9.6	0.1	9.7
Unit-linked	1,843.3	7.5	1,850.7	1,689.6	7.0	1,696.6
Capital redemption policy						
Technical interest rate	1.0	0.0	1.0	1.0	0.0	1.0
Unit-linked	716.1	2.7	718.8	548.1	2.1	550.3
Individual pension insurance						
Technical interest rate	153.6	0.6	154.2	171.2	0.9	172.1
Unit-linked	232.7	1.5	234.2	233.9	1.7	235.6
Group pension insurance						
Technical interest rate	234.5	4.5	238.9	251.2	4.2	255.4
Unit-linked	318.5	5.0	323.5	292.9	4.5	297.4
Life risk insurance	-47.1	10.9	-36.2	-51.2	9.9	-41.2
Total	3,459.7	32.7	3,492.4	3,146.3	30.5	3,176.8
Technical interest rate	396.1	5.2	401.3	433.0	5.2	438.1
Unit-linked	3,110.6	16.6	3,127.2	2,764.5	15.3	2,779.9
Life risk insurance	-47.1	10.9	-36.2	-51.2	9.9	-41.2
Total	3,459.7	32.7	3,492.4	3,146.3	30.5	3,176.8

In solvency calculation, the cash flows of the best estimate of technical provisions have been determined using a simulation technique and on a contract-by-contract basis.

Uncertainty about the level of technical provisions arises from factors such as the following:

- Future cash flows are based on various estimates derived from historical statistics regarding factors such as future mortality, disability and customer behaviour. Actual developments are likely to deviate from these estimates.
- The amount of future operating expenses is affected by the estimated amount of future inflation. The actual inflation trend is likely to deviate from this estimate.

The main differences in the criteria, methods and key assumptions used for the valuation of the technical provisions in the solvency calculation and financial statements are as follows:

- The technical provisions according to the financial statements of insurance with a technical rate of interest and unit-linked insurance consist mainly of insurance savings and the supplementary provision for the guaranteed interest rate. The technical provisions according to the solvency calculation consist of future cash flows determined in a market-consistent manner, being influenced by factors such as interest rates as well as biometric and behavioural assumptions of policyholders.
- For risk life insurance, the financial statements' technical provisions consist of the provision for unearned premiums, the provision for claims outstanding for known and unknown claims, and the provisions for bonuses, in total EUR 10.5 million. The technical provisions according to solvency calculation for risk life insurance were negative, totalling EUR -36.2 million, because future premiums are expected to exceed the amount of operating expenses required to manage future claims and insurance. This effect is also seen in outwards reinsurance, whose value in assets was negative. The amounts are particularly sensitive to the termination assumptions of risk life insurance.

D.2.4 Matching and volatility adjustments and transitional provisions

Matching adjustments, volatility adjustments and transitional provisions were not used in determining the technical provisions of Fennia Group, Fennia and Fennia Life.

D.3 Other liabilities

Fennia Group's, Fennia's and Fennia Life's other liabilities consist of short-term indirect liabilities related to taxation, purchase invoices and other operations. Other liabilities are presented in the balance sheet and taken into account in solvency calculation at nominal value.

Deferred tax liabilities arising from periodisation differences between accounting and taxation are entered in full in the annual accounts of the Group companies and in the consolidated financial statements. In addition, the solvency calculation takes into account any deferred tax liability arising from differences in the valuation principles of the solvency calculation and the financial statements. Deferred taxes are calculated according to the confirmed rate of tax on the date of closing the accounts.

D.4 Alternative methods for valuation

In connection with the valuation of assets, transitioning to the use of an alternative method for valuation is made on a case-by-case basis, and the reasons for the transition are documented. For investment instruments for which the alternative method for valuation is the only option, documented valuation models must be available before making an investment decision.

D.5 Any other information

There is no other material information about the valuation for solvency purposes in Fennia Group, Fennia or Fennia Life.

E. Capital management

E.1 Own funds

E.1.1 Objectives, policies and processes for the management of own funds

The goal of managing the Group's own funds is to ensure the sufficiency of its own funds to cover the regulatory solvency capital requirement and a sufficiently large surplus at all times, and to allocate capital to key risk areas efficiently in terms of the risk-return ratio. The aforementioned excess is determined by the company's own risk perception in relation to the regulatory solvency capital requirement and by preparing for sudden and unforeseeable disruptions.

The required minimum level of own funds is the minimum level with which the company can, with high probability, meet its obligations concerning the benefits of the insured. Both the company's own funds and the solvency capital requirement may change rapidly as a result of open risk positions, in which case it may no longer be possible to conduct business normally. For such sudden and unpredictable stressors, a capital buffer of the desired size is defined in addition to the required minimum amount of own funds. The purpose of the capital buffer is to provide time to adjust the risk position in the event of sudden and unexpected materialisation of risks, that is, to deliberately adjust the risk-return position and solvency position to the level corresponding to the new operating situation.

The target level of solvency is formed by the company's own view of the overall solvency need and the internally defined capital buffer. The required amount of the capital buffer is also assessed over a long period of time. Therefore, qualitative perspectives and non-measurable risks are also included in the assessment. This includes perspectives such as the business strategy set by the Board of Directors and the risks and opportunities associated with the business environment.

The management of the Group's own funds and solvency is part of the risk management system. The risk and solvency assessment, carried out at least once a year, updates and defines the risk-taking capacity and risk appetite and allocates risky capital overall and across individual risks. Risk limits and restrictions on risk-taking are designed to correspond to the above described intent. The implementation of risk-taking limits is continuously monitored, risk-taking is reviewed and, if necessary, the management framework is updated quarterly to reflect any changes in the business or investment environment.

E.1.2 Classification and eligibility of own funds

E.1.2.1 Fennia Group's own funds

Fennia Group's solvency is calculated using a method based on consolidation (Method 1).

The table below shows the structure and amount of Fennia Group's own funds at the end of the reporting period and at the end of the previous reporting period.

Available own funds (EUR million)	31.12.2025	31.12.2024
Basic own funds		
Excess of assets over liabilities (net asset value)	994.4	1,005.0
Foreseeable dividends, distributions and charges	0.0	0.0
Subordinated liabilities	0.0	0.0
Other non-available own funds	0.0	0.0
Total	994.4	1,005.0
Ancillary own funds	0.0	0.0
Own funds (Basic own funds + Ancillary own funds)	994.4	1,005.0

Fennia and Fennia Life's own funds were fully available at the Group level at the end of the reporting period.

The tables below show the type of Fennia Group's own funds at the end of the reporting period and at the end of the previous reporting period, as well as the eligibility of items as cover for the solvency capital requirement and the minimum solvency capital requirement.

Classification and eligibility of own funds 31.12.2025 (EUR million)	Available	Eligible own funds to meet the SCR	Eligible own funds to meet the MCR
Tier 1 - unrestricted	994.4	994.4	994.4
Tier 1 - restricted	0.0	0.0	0.0
Tier 2	0.0	0.0	0.0
Tier 3	0.0	0.0	0.0
Total	994.4	994.4	994.4

Classification and eligibility of own funds 31.12.2024 (EUR million)	Available	Eligible own funds to meet the SCR	Eligible own funds to meet the MCR
Tier 1 - unrestricted	1,005.0	1,005.0	1,005.0
Tier 1 - restricted	0.0	0.0	0.0
Tier 2	0.0	0.0	0.0
Tier 3	0.0	0.0	0.0
Total	1,005.0	1,005.0	1,005.0

Fennia Group's available own funds belonged in their entirety to class 1, which can be used without limitation and as they stand to cover the solvency capital requirement.

A more detailed breakdown of own funds at the end of the reporting period can be found in Fennia Group's note S.23.01.22.

Fennia Group does not apply the transitional measures enabled by the regulation to its own funds.

The difference between the financial statements' capital and reserves and solvency calculation's net asset value at the end of the reporting period was EUR 331.2 million (EUR 299.2 million). The tables below contain a balance sheet summary that shows the key differences between the financial statements and the solvency calculation at the end of the reporting period and the previous reporting period.

31.12.2025 (EUR million)	Solvency balance sheet	Statutory account balance sheet	Difference
Assets			
Goodwill	0.0	22.6	-22.6

Deferred tax liabilities	76.9	26.3	50.6
Any other liabilities, not elsewhere shown	64.5	82.2	-17.7
Total liabilities	4,199.9	4,712.3	-512.4
Excess of assets over liabilities			
Net asset value / Capital and reserves	1,005.0	705.8	299.2

The assets' balance sheet differences are essentially linked to the fact that

- goodwill and intangible assets are reset in the solvency calculation balance sheet
- in the financial statements, certain investments are valued at purchase price, an increased or reduced purchase price, nominal value or otherwise in accordance with the precautionary principle, while in the solvency balance sheet, investments are valued at market value or at market-consistent value
- in the balance sheet of the financial statements, the receivables from reinsurance contracts are valued on a prudential basis and without discounting, while in the balance sheet of the solvency calculation, the receivables are valued at market-consistent value, taking into account the insurance obligations within the scope of the agreement
- the expected rebates from the assets covered by unit-linked contracts are capitalised in the solvency calculation balance sheet.

The liabilities' balance sheet differences are essentially linked to the fact that

- in the solvency balance sheet, the technical provisions are valued at market-consistent value, while in the balance sheet, the technical provisions are valued at surrender value or on a prudential basis
- the equalisation amount is included in the technical provisions of the financial statements, but not in the solvency calculation
- in the solvency calculation balance sheet, a deferred tax liability is calculated from future profits.

A more detailed breakdown of the solvency calculation balance sheet at the end of the reporting period can be found in Fennia Group's note S.02.01.02.

E.1.2.2 Fennia's own funds

The table below specifies the structure and amount of Fennia's own funds at the end of the reporting period and at the end of the previous reporting period.

Available own funds (EUR million)	31.12.2025	31.12.2024
Basic own funds		
Excess of assets over liabilities (net asset value)	956.2	974.6
Foreseeable dividends, distributions and charges	0.0	0.0
Subordinated liabilities	0.0	0.0
Total	956.2	974.6
Ancillary own funds	0.0	0.0
Own funds (Basic own funds + Ancillary own funds)	956.2	974.6

The tables below detail the type of Fennia's own assets at the end of the reporting period and at the end of the previous reporting period, as well as the eligibility of items as cover for the solvency capital requirement and minimum capital requirement.

Classification and eligibility of own funds 31.12.2025 (EUR million)	Available	Eligible own funds to meet the SCR	Eligible own funds to meet the MCR
Tier 1 - unrestricted	956.2	956.2	956.2
Tier 1 - restricted	0.0	0.0	0.0
Tier 2	0.0	0.0	0.0
Tier 3	0.0	0.0	0.0
Total	956.2	956.2	956.2

Classification and eligibility of own funds 31.12.2024 (EUR million)	Available	Eligible own funds to meet the SCR	Eligible own funds to meet the MCR
Tier 1 - unrestricted	974.6	974.6	974.6
Tier 1 - restricted	0.0	0.0	0.0
Tier 2	0.0	0.0	0.0
Tier 3	0.0	0.0	0.0
Total	974.6	974.6	974.6

The company's available own funds belonged in their entirety to class 1, which can be used without limitation and as they stand to cover the solvency capital requirement.

A more detailed breakdown of own funds at the end of the reporting period can be found in Fennia's note S.23.01.01.

The company does not apply the transitional measures enabled by the regulation to its own funds.

The difference between the financial statements' capital and reserves and solvency calculation's net asset value at the end of the reporting period was EUR 407.6 million (EUR 365.7 million). The tables below provide balance sheet summaries that show the key differences between the financial statements and the solvency calculation at the end of the reporting period and the previous reporting period.

31.12.2025 (EUR million)	Solvency balance sheet	Statutory account balance sheet	Difference

Intangible assets	0.0	126.2	-126.2
Investments	1,952.3	1,603.7	348.6
Assets held for index-linked and unit-linked contracts	0.0	0.0	0.0
Reinsurance recoverables	8.8	12.0	-3.2
Provision rebates from funds covering unit-linked contracts	0.0	0.0	0.0
Deferred tax assets	0.0	0.0	0.0
Any other assets, not elsewhere shown	41.7	259.5	-217.8
Total assets	2,002.8	2,001.4	1.4
Liabilities			
Technical provisions	870.6	1,205.6	-335.0
Equalisation reserve	0.0	109.7	-109.7
Derivative liabilities	8.7	0.0	8.7
Deferred tax liabilities	91.4	15.4	76.1
Any other liabilities, not elsewhere shown	57.5	61.9	-4.4
Total liabilities	1,028.3	1,392.6	-364.3
Excess of assets over liabilities			
Net asset value / Capital and reserves	974.6	608.8	365.7

The assets' balance sheet differences are essentially linked to the fact that:

- goodwill and intangible assets are reset in the solvency calculation balance sheet
- in the financial statements, certain investments are valued at purchase price, an increased or reduced purchase price, nominal value or otherwise in accordance with the precautionary principle, while in the solvency balance sheet, investments are valued at market value or at market-consistent value
- in the balance sheet of the financial statements, the receivables from reinsurance contracts are valued on a prudential basis and without discounting, while in the balance sheet of the solvency calculation, the receivables are valued at market-consistent value, taking into account the insurance obligations within the scope of the agreement
- in other liabilities, a significant proportion of the insurance receivables and receivables from insurance representatives have been transferred to the technical provisions calculation.

The liabilities' balance sheet differences are essentially linked to the fact that:

- in the solvency balance sheet, the technical provisions are valued at market-consistent value, while in the balance sheet, the technical provisions are valued on a prudential basis
- the equalisation amount is included in the technical provisions of the financial statements, but not in the solvency calculation
- in the solvency calculation balance sheet, a deferred tax liability is calculated from future profits.

A more detailed breakdown of the solvency calculation balance sheet at the end of the reporting period can be found in Fennia's annex S.02.01.02.

E.1.2.3 Fennia Life's own funds

The table below shows the structure and amount of Fennia Life's own funds at the end of the reporting period and at the end of the previous reporting period.

Available own funds (EUR million)	31.12.2025	31.12.2024
Basic own funds		
Excess of assets over liabilities (net asset value)	246.1	219.2
Own shares (held directly and indirectly)	0.0	0.0
Foreseeable dividends, distributions and charges	0.0	0.0
Subordinated liabilities	0.0	0.0
Total	246.1	219.2
Ancillary own funds	0.0	0.0
Own funds (Basic own funds + Ancillary own funds)	246.1	219.2

The tables below detail the type of Fennia Life's own assets at the end of the reporting period and at the end of the previous reporting period, as well as the eligibility of items as cover for the solvency capital requirement and minimum capital requirement.

Classification and eligibility of own funds 31.12.2025 (EUR million)	Available	Eligible own funds to meet the SCR	Eligible own funds to meet the MCR
Tier 1 - unrestricted	246.1	246.1	246.1
Tier 1 - restricted	0.0	0.0	0.0
Tier 2	0.0	0.0	0.0
Tier 3	0.0	0.0	0.0
Total	246.1	246.1	246.1

Classification and eligibility of own funds 31.12.2024 (EUR million)	Available	Eligible own funds to meet the SCR	Eligible own funds to meet the MCR
Tier 1 - unrestricted	219.2	219.2	219.2
Tier 1 - restricted	0.0	0.0	0.0
Tier 2	0.0	0.0	0.0
Tier 3	0.0	0.0	0.0
Total	219.2	219.2	219.2

The company's available own funds belonged in their entirety to class 1, which can be used without limitation and as they stand to cover the solvency capital requirement.

A more detailed breakdown of own funds at the end of the reporting period can be found in Fennia Life's note S.23.01.01.

The company does not apply the transitional measures enabled by the regulation to its own funds.

The difference between the financial statements' capital and reserves and solvency calculation's net asset value at the end of the reporting period was EUR 67.4 million (EUR 55.2 million). The tables below contain a balance sheet summary that shows the key differences between the financial statements and the solvency calculation at the end of the reporting period and the previous reporting period.

31.12.2025 (EUR million)	Solvency balance sheet	Statutory account balance sheet	Difference
Assets			
Goodwill	0.0	11.1	-11.1
Intangible assets	0.0	1.8	-1.8
Investments	578.4	553.9	24.5
Assets held for index-linked and unit-linked contracts	3,187.7	3,189.9	-2.2
Reinsurance recoverables	-2.0	0.0	-2.0
Deferred tax assets	0.0	0.0	0.0
Any other assets, not elsewhere shown	16.7	75.4	-58.6
Total assets	3,780.8	3,832.1	-51.3
Liabilities			
Technical provisions	3,492.4	3,622.5	-130.1
Equalisation reserve	0.0	0.0	0.0
Derivative liabilities	14.8	0.0	14.8
Deferred tax liabilities	16.9	8.0	8.8
Any other liabilities, not elsewhere shown	10.8	22.9	-12.1
Total liabilities	3,534.8	3,653.4	-118.7
Excess of assets over liabilities			
Net asset value / Capital and reserves	246.1	178.7	67.4

31.12.2024 (EUR million)	Solvency balance sheet	Statutory account balance sheet	Difference
Assets			
Goodwill	0.0	14.0	-14.0
Intangible assets	0.0	2.6	-2.6
Investments	575.1	553.8	21.3
Assets held for index-linked and unit-linked contracts	2,835.5	2,836.3	-0.9
Reinsurance recoverables	-2.6	0.0	-2.6
Provision rebates from funds covering unit-linked contracts	0.0	0.0	0.0
Deferred tax assets	1.5	1.5	0.0
Any other assets, not elsewhere shown	9.4	73.0	-63.6
Total assets	3,418.8	3,481.3	-62.4
Liabilities			
Technical provisions	3,176.8	3,294.7	-117.9
Equalisation reserve	0.0	0.0	0.0
Derivative liabilities	2.4	0.0	2.4
Deferred tax liabilities	13.8	8.9	4.9
Any other liabilities, not elsewhere shown	6.6	13.7	-7.1
Total liabilities	3,199.7	3,317.3	-117.7
Excess of assets over liabilities			
Net asset value / Capital and reserves	219.1	163.9	55.2

The assets' balance sheet differences are essentially linked to the fact that:

- goodwill and intangible assets are reset in the solvency calculation balance sheet
- in the financial statements, certain investments are valued at purchase price, an increased or reduced purchase price, nominal value or otherwise in accordance with the precautionary principle, while in the solvency balance sheet, investments are valued at market value or at market-consistent value
- in the balance sheet of the financial statements, the receivables from reinsurance contracts are zero, while in the balance sheet of the solvency calculation, the contracts are valued at market-consistent value, taking into account the insurance obligations within the scope of the agreement
- the expected rebates from the assets covered by unit-linked contracts are capitalised in the solvency calculation balance sheet.

The liabilities' balance sheet differences are essentially linked to the fact that:

- in the solvency balance sheet, the technical provisions are valued at market-consistent value, while in the balance sheet, the technical provisions are valued at surrender value or on a prudential basis
- in the solvency calculation balance sheet, a deferred tax liability is calculated from future profits.

A more detailed breakdown of the solvency calculation balance sheet at the end of the reporting period can be found in Fennia Life's annex S.02.01.02.

E.2 Solvency capital requirement and minimum capital requirement

E.2.1 Fennia Group's solvency capital requirement and minimum capital requirement

Fennia Group's solvency capital requirement at the end of the reporting period was EUR 571.5 million (EUR 499.5 million), and Fennia Group's minimum consolidated solvency capital requirement was EUR 163.3 million (EUR 143.7 million). Fennia Group's relative solvency position was 174.0% (201.2%).

Fennia Group's solvency capital requirement divided into risk classes at the end of the reporting period and the previous reporting period was:

Solvency capital requirement (EUR million)	31.12.2025	31.12.2024
Market risk	460.2	418.3
Counterparty default risk	66.7	45.6
Life underwriting risk	99.4	68.9
Health underwriting risk	61.6	62.3
Non-life underwriting risk	90.0	86.7
Diversification	-207.4	-174.4
Intangible asset risk	0.0	0.0
Basic solvency capital requirement	570.6	507.3
Operational risk	23.9	18.0
Loss-absorbing capacity of technical provisions	0.0	0.0
Loss-absorbing capacity of deferred taxes	-57.3	-51.1
Capital requirement for other financial sectors	0.0	0.0
Capital requirement for other companies	34.3	25.2
Capital add-on already set	0.0	0.0
Solvency capital requirement	571.5	499.5

In adjusting the loss-absorbing capacity of deferred taxes, the deferred tax receivables arising from the loss resulting from the scenario used in the solvency calculation is not taken into account.

Fennia applies simplified calculation in standard formula natural disaster risk calculations. Except for the risks in Finland, the risk zone-level data required for these calculations is simplified by grouping the data into the highest risk zone of each country. There is very little natural disaster risk outside Finland, and the simplification provides further security. Fennia does not apply other simplifications in standard formula calculations.

The breakdown of the solvency capital requirement can be found in Fennia Group's note S.25.01.22.

The relevant inputs for the calculation of the consolidated minimum solvency capital requirement of Fennia Group are the following:

Insurance undertakings (EUR million)	31.12.2025	31.12.2024
Fennia Mutual Insurance Company - Minimum capital requirement	116.2	108.8
Fennia Life Insurance Company Ltd - Minimum capital requirement	35.7	35.0
Fennia Life Insurance Ltd - Minimum capital requirement	11.4	-
Minimum consolidated group solvency capital requirement	163.3	143.7

Fennia Group does not use

- an internal model for the calculation of the solvency capital requirement
- company-specific parameters in the calculation of the standard formula
- the duration-based equity risk sub-module for the calculation of the solvency capital requirement.

E.2.2 Fennia's solvency capital requirement and minimum capital requirement

Fennia's solvency capital requirement at the end of the reporting period was EUR 464.9 million (EUR 435.1 million), and the minimum capital requirement was EUR 116.2 million (EUR 108.8 million). Fennia's relative solvency was 205.7 percent (224.0%).

Fennia's solvency capital requirement divided into risk classes at the end of the reporting period and the previous reporting period was:

Solvency capital requirement (EUR million)	31.12.2025	31.12.2024
Market risk	421.5	402.2
Counterparty default risk	58.4	34.7
Life underwriting risk	10.4	12.1
Health underwriting risk	61.6	62.3
Non-life underwriting risk	90.0	86.7
Diversification	-144.7	-130.4
Intangible asset risk	0.0	0.0
Basic solvency capital requirement	497.2	467.5
Operational risk	14.2	13.3
Loss-absorbing capacity of technical provisions	0.0	0.0
Loss-absorbing capacity of deferred taxes	-46.5	-45.8
Capital add-on already set	0.0	0.0
Solvency capital requirement	464.9	435.1

The breakdown of the solvency capital requirement can be found in Fennia's note S.25.01.21.

The relevant input data for the calculation of Fennia's minimum capital requirement are as follows:
The figures are net values, minus the share of reinsurance contracts.

Input data to calculate Minimum capital requirement (EUR million)	31.12.2025		31.12.2024	
	Best estimate and technical provision calculated as a whole	Written premiums in the last 12 months	Best estimate and technical provision calculated as a whole	Written premiums in the last 12 months
Medical expense insurance and proportional reinsurance	32.8	71.3	35.3	58.7
Income protection insurance and proportional reinsurance	0.8	3.4	0.5	2.8
Workers' compensation insurance and proportional reinsurance	18.0	83.9	10.1	77.4
Motor vehicle liability insurance and proportional reinsurance	30.2	75.2	32.8	70.6
Other motor insurance and proportional reinsurance	42.3	107.1	47.5	97.0
Marine, aviation and transport insurance and proportional reinsurance	2.7	8.5	2.5	8.2
Fire and other damage to property insurance and proportional reinsurance	23.7	84.6	39.3	80.2
General liability insurance and proportional reinsurance	38.3	23.8	40.0	21.8
Credit and suretyship insurance and proportional reinsurance	1.7	0.8	0.4	0.7
Legal expenses insurance and proportional reinsurance	10.3	12.0	10.7	11.5
Assistance and proportional reinsurance	0.0	0.0	0.0	0.0
Miscellaneous financial loss insurance and proportional reinsurance	0.0	10.8	0.0	10.0
Non-proportional health reinsurance	0.0	0.0	0.0	0.0
Non-proportional casualty reinsurance	0.0	0.0	0.0	0.0
Non-proportional marine, aviation and transport reinsurance	0.0	0.0	0.0	0.0
Non-proportional property reinsurance	0.0	0.0	0.0	0.0

	31.12.2025		31.12.2024	
	Best estimate and technical provision calculated as a whole	Total capital at risk	Best estimate and technical provision calculated as a whole	Total capital at risk
Obligations with profit participation - guaranteed benefits	0.0	-	0.0	-
Obligations with profit participation - future discretionary benefits	0.0	-	0.0	-
Index-linked and unit-linked insurance obligations	0.0	-	0.0	-
Other life (re)insurance and health (re) insurance obligations	550.6	-	606.7	-
Total capital at risk for all life (re) insurance obligations	-	0.0	-	0.0

In adjusting the loss-absorbing capacity of deferred taxes, the deferred tax receivables arising from the loss resulting from the scenario used in the solvency calculation is not taken into account.

Fennia applies simplified calculation in standard formula natural disaster risk calculations. Except for the risks in Finland, the risk zone-level data required for these calculations is simplified by grouping the data into the highest risk zone of each country. There is very little natural disaster risk outside Finland, and the simplification provides further security. Fennia does not apply other simplifications in standard formula calculations.

A more detailed breakdown of the calculation of the minimum capital requirement at the end of the reporting period can be found in Fennia's note S.28.01.01.

Fennia does not use

- an internal model for the calculation of the solvency capital requirement
- company-specific parameters in the calculation of the standard formula
- the duration-based equity risk sub-module for the calculation of the solvency capital requirement.

E.2.3 Fennia Life's solvency capital requirement and minimum capital requirement

Fennia Life's solvency capital requirement at the end of the reporting period was EUR 126.6 million (EUR 108.5 million), and the minimum capital requirement was EUR 35.7 million (EUR 35.0 million). Fennia Life's relative solvency position was 194.4 per cent (201.9%).

Fennia Life's solvency capital requirement divided into risk classes at the end of the reporting period and the previous reporting period was:

Solvency capital requirement (EUR million)	31.12.2025	31.12.2024
Market risk	97.3	78.5
Counterparty default risk	10.4	10.6
Life underwriting risk	69.0	63.6
Health underwriting risk	0.0	0.0
Non-life underwriting risk	0.0	0.0
Diversification	-40.4	-36.2
Intangible asset risk	0.0	0.0
Basic solvency capital requirement	136.2	116.5
Operational risk	5.3	4.9
Loss-absorbing capacity of technical provisions	0.0	0.0
Loss-absorbing capacity of deferred taxes	-14.9	-12.8
Capital add-on already set	0.0	0.0
Solvency capital requirement	126.6	108.5

In adjusting the loss-absorbing capacity of deferred taxes, the deferred tax receivables arising from the loss resulting from the scenario used in the solvency calculation is not taken into account.

The breakdown of the solvency capital requirement can be found in Fennia Life's note S.25.01.21.

The relevant input data for the calculation of Fennia Life's minimum capital requirement are as follows: The figures are net values, minus the share of reinsurance contracts.

Input data to calculate Minimum capital requirement (EUR million)	31.12.2025		31.12.2024	
	Best estimate and technical provision calculated as a whole	Total capital at risk	Best estimate and technical provision calculated as a whole	Total capital at risk
Obligations with profit participation - guaranteed benefits	358.6	-	403.0	-
Obligations with profit participation - future discretionary benefits	37.5	-	30.0	-
Index-linked and unit-linked insurance obligations	3,110.6	-	2,764.5	-
Other life (re)insurance and health (re) insurance obligations	0.0	-	0.0	-
Total capital at risk for all life (re) insurance obligations	-	3,732.5	-	3,232.8

A more detailed breakdown of the calculation of the minimum capital requirement at the end of the reporting period can be found in Fennia Life's note S.28.01.01.

Fennia Life does not use

- an internal model for the calculation of the solvency capital requirement
- company-specific parameters in the calculation of the standard formula
- simplified calculation in the risk sections or in the sub-module of the standard formula
- the duration-based equity risk sub-module for the calculation of the solvency capital requirement.

E.3 Use of the duration-based equity risk sub-module in the calculation of the solvency capital requirement

Fennia Group, Fennia and Fennia Life do not use duration-based equity risk sub-module to calculate the solvency capital requirement.

E.4 Differences between the standard formula and any internal model used

Fennia Group, Fennia and Fennia Life do not use internal models for calculating the solvency capital requirement.

E.5 Non-compliance with the minimum capital requirement and non-compliance with the solvency capital requirement

During the reporting period, Fennia Group, Fennia or Fennia Life have not fallen below the regulatory solvency capital requirement, the minimum solvency capital requirement or the minimum capital requirement.

E.6 Any other information

There is no other material information about Fennia Group's, Fennia's and Fennia Life's capital management.

Annexes

Quantitative tables

The annexes present Fennia Group's, Fennia's and Fennia Life's numerical data for 2025 in accordance with solvency regulation. The figures are presented in thousands of euros in the tables.

Annex - Fennia Group

S.12.01.02: Life and Health SLT Technical Provisions

Technical provisions calculated as a whole

Total Recoverables from reinsurance/SPV and Finite Re after the adjustment for expected losses due to counterparty default associated to TP as a whole

Technical provisions calculated as a sum of BE and RM

Best Estimate

Gross Best Estimate

Total Recoverables from reinsurance/SPV and Finite Re after the adjustment for expected losses due to counterparty default

Best estimate minus recoverables from reinsurance/SPV and Finite Re

Risk Margin
