

EV Home Charger Subscription

SIMPLIFY HOME CHARGING

Simplify your home charger deployment with subscription services from Arc by Element™. It allows you to create a consistent budget with no upfront costs, and without sacrificing driver experience.

Benefits of the EV Home Charger Subscription:

One-stop shop approach: This creates ease of mind for procurement and ongoing management of your home charging program.

All-inclusive & turnkey: The subscription is not just a financing solution for the installation cost. It includes installation, hardware, software/connectivity, driver reimbursement reporting, Element support and reporting. (Excludes electricity/energy consumed by the driver).

Amortization: The subscription model allows you to amortize the capital cost over an extended period of time, removing the high upfront cost of charger deployment.

Fixed cost: The subscription fee is the same every month, for every driver. All residential chargers under the install cap must be under the subscription program. This enables ease of budgeting and cost control/forecasting, regardless of the variability in homes.

Easy and affordable EV home charging.
