Global X U.S. 500 Income EdgeSM ETF

Ticker: EDGX Exchange: NYSE Arca

INVESTMENT OBJECTIVE

The Global X U.S. 500 Income EdgeSM ETF (the "Fund") seeks to provide current income and exposure to the Solactive GBS United States 500 Index (the "Reference Index").

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares ("Shares") of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fees:	0.50%
Distribution and Service (12b-1) Fees:	None
Other Expenses: ¹	0.00%
Total Annual Fund Operating Expenses:	0.50%
Expense Reimbursement and/or Fee Waiver: ²	(0.50)%
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement:	0.00%

¹ Other Expenses are based on estimated amounts for the current fiscal year.

² Pursuant to an Expense Limitation Agreement, the Adviser has contractually agreed to reimburse or waive fees and/or limit Fund expenses to the extent necessary to assure that the operating expenses of the Fund (exclusive of taxes, brokerage fees, commissions, and other transaction expenses, interest, and extraordinary expenses (such as litigation and indemnification expenses)) will not exceed 0.00% of the Fund's average daily net assets per year, until at least March 1, 2027.

Example: The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account customary brokerage commissions that you pay when purchasing or selling Shares of the Fund in the secondary market. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

One Year	Three Years
\$0	\$110

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. This is a new fund and does not yet have a portfolio turnover rate to disclose.

PRINCIPAL INVESTMENT STRATEGIES

The Fund is an actively managed exchange traded fund ("ETF") that seeks to generate weekly income by selling (writing) call options and to provide exposure to the Solactive GBS United States 500 Index (the "Reference Index") by investing in the equity securities that comprise the Reference Index and/or ETFs that share economic characteristics with the component securities of the Reference Index (collectively the "U.S. 500 Portfolio"). The ETFs in the U.S. 500 Portfolio may include ETFs that are affiliated with or unaffiliated with the Fund and the Adviser. Under normal circumstances, the Fund invests at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in the U.S. 500 Portfolio, and in options written on the U.S. 500 Portfolio. The Reference Index is a float-adjusted market capitalization weighted index containing equity securities of 500 companies, regarded as generally representative of the U.S. stock market. A float-adjusted market capitalization weighted index weights each index component according to its market capitalization, using the number of shares that are readily available for purchase on the open market.

Target Annual Distributions

The Fund intends to target a 9% annualized distribution rate through option premiums collected from selling call options on a portion of the U.S. 500 Portfolio and dividends paid by the Fund's U.S. 500 Portfolio. These distributions will be paid on a weekly basis based on the Fund's NAV as calculated on the business day prior to the ex-dividend date.

There is no assurance the Fund will achieve its target annualized distribution rate. The actual distributions the Fund makes over a one-year period may deviate from its intended target annualized distribution rate as a result of fluctuations in NAV over time.

In seeking to achieve its target 9% annualized distribution rate, the Fund will write call options to generate cash from option premiums. In pursuing the Fund's 9% annual distribution target, the Fund will generally write call options on only a portion of the U.S. 500 Portfolio, with such portion determined by the Adviser based on market conditions, option premium availability, and the Fund's income objectives. The portion of the U.S. 500 Portfolio that is capped by the written call options will not be able to participate in any appreciation beyond the strike price of the written options. The remaining portion of the Fund's U.S. 500 Portfolio will be uncapped and may appreciate when the underlying securities appreciate.

To the extent the cash generated from the Fund's sale of call options falls short of its target annualized distribution rate, distributions will reduce the Fund's net asset value ("NAV"). If the Fund's NAV declines over time, the dollar amount of future distributions will also decrease. Distributions may be classified, in part or in whole, as a return of capital ("ROC"). A ROC is a return of a shareholder's invested capital rather than a traditional source of income such as dividends or interest. See the prospectus section titled **"ADDITIONAL INFORMATION ABOUT THE FUNDS"** for more information about option premiums and ROC.

The Fund is classified as "non-diversified," which means it may invest a larger percentage of its assets in a smaller number of issuers than a diversified fund.

SUMMARY OF PRINCIPAL RISKS

As with any investment, you could lose all or part of your investment in the Fund, and the Fund's performance could trail that of other investments. There is no guarantee that the Fund will achieve its investment objective. An investment in the Fund is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency, the Adviser or any of its affiliates. The Fund is subject to the principal risks noted below, any of which may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as other risks that are described in greater detail in the **Additional Information About the Funds** section of the Prospectus and in the Statement of Additional Information ("SAI"). The order of the below risk factors does not indicate the significance of any particular risk factor.

Active Management Risk: The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

Asset Class Risk: Securities and other assets held in the Fund's portfolio may underperform in comparison to the general securities markets, a particular securities market or other asset classes.

Derivatives Risk: The Fund will invest in derivative instruments. Derivatives (e.g., options, futures contracts, forwards, swaps) are instruments the value of which is derived from that of other assets, rates, or indices. Derivatives can be more sensitive to changes in interest rates or to sudden fluctuations in market prices than conventional securities, which can result in greater losses for the Fund. There is the risk of imperfect correlation between the value of a derivative and that of the asset underlying the derivative. Derivative instruments are subject to a number of risks including counterparty, liquidity, interest rate, market, credit and management risks, as well as the risk of improper valuation. Certain derivatives are subject to counterparty risk, which is the risk that the other party in the transaction will not fulfill its contractual obligations. Derivatives are usually traded on margin, which may subject the Fund to margin calls. Margin calls may force the Fund to liquidate assets. Further, the market for certain derivatives may become illiquid under adverse market or economic conditions independent of any specific adverse changes in the conditions of a particular issuer. If the Fund needed to sell a large block of illiquid securities to meet shareholder redemption request or to raise cash, these sales could further reduce the securities' prices and adversely affect performance of the Fund.

from Global X Funds at www.icsdelivery.com

Equity Securities Risk: Equity securities are subject to changes in value, and their values may be more volatile than other asset classes, as a result of a company's business performance, investor perceptions, stock market trends and general economic conditions.

ETF Investment Risk: The Fund is subject to the same risks as underlying ETFs in which it may invest, including: that the underlying ETF's shares may trade at a premium or discount to NAV; that an underlying ETF may experience a lack of liquidity that can result in greater volatility than its underlying securities; that an active trading market for an underlying ETF's shares may not develop or be maintained; that trading in an underlying ETF's shares may be halted in certain circumstances; and that an underlying ETF may fail to achieve its investment objective, which may adversely affect the value of the Fund's investment in the underlying ETF and the overall performance of the Fund. Subjective decisions made by the investment adviser of an underlying ETF may cause the underlying ETF to incur losses or to miss profit opportunities on which it may otherwise have capitalized. Because the value of an underlying ETF's shares depends on the demand in the market, the Adviser may not be able to liquidate the Fund's holdings in those shares at the most optimal time, thereby adversely affecting the Fund's performance.

An underlying ETF that seeks to track an underlying index may experience tracking error in relation to the index. Further, a lack of liquidity may result in the underlying ETF's value being more volatile than the underlying portfolio securities. Underlying ETFs in which the Fund invests may be non-diversified under the Investment Company Act of 1940 and its shares may be more volatile and fluctuate more than shares of a diversified fund that invests in a broader range of securities. In addition, investments in the securities of underlying ETFs may involve duplication of advisory fees and certain other expenses.

Capitalization Risk: Investing in issuers within the same market capitalization category carries the risk that the category may be out of favor due to current market conditions or investor sentiment.

Large-Capitalization Companies Risk: Large-capitalization companies may adapt more slowly to new competitive challenges and changing market conditions than smaller capitalization companies. In addition, large-capitalization companies may be more mature and subject to more limited growth potential and consequently may underperform other segments of the equity market or the market as a whole.

Covered Call Option Writing Risk: By writing covered call options on a portion of the Fund's portfolio in return for the receipt of premiums, the Fund will give up the opportunity to benefit from potential increases in the value of the Reference Index above the exercise prices of such options, but may continue to bear the risk of declines in the value of the Reference Index. The premiums received from the options may not be sufficient to offset any losses sustained from the volatility of the underlying stocks over time. Additionally, because the Fund will write options on a portion of the stocks underlying the Reference Index, rather than on the Reference Index itself, it is possible that the Fund may decrease in value, even in circumstances where the Reference Index increases in value, particularly during periods where the returns of the stocks underlying the Reference Index are relatively uncorrelated. The Fund will have no control over the exercise of the option by the option holder and may lose the benefit from any capital appreciation on the underlying security when the option holder exercises the option. In addition, the Fund's ability to sell the securities underlying the options will be limited while the options are in effect unless the Fund cancels out the option positions through the purchase of offsetting identical options prior to the expiration of the written options. Exchanges may suspend the trading of options in volatile markets. If trading is suspended, the Fund may be unable to write options at times that may be desirable or advantageous to do so.

With the increased use of technologies such as the Internet to conduct business, the Fund, like all companies, may be susceptible to operational, information security and related risks. Cybersecurity incidents involving the Fund and its service providers (including, without limitation, the Adviser, fund accountant, custodian, transfer agent and financial intermediaries) have the ability to cause disruptions and impact business operations, potentially resulting in financial losses, impediments to trading, the inability of Fund shareholders to transact business, violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, and/or additional compliance costs.

Cybersecurity Risk: With the increased use of technologies such as the Internet to conduct business, the Fund, like all companies, may be susceptible to operational, information security and related risks. Cybersecurity incidents involving the Fund and its service providers (including, without limitation, the Adviser, fund accountant, custodian, transfer agent and financial intermediaries) have the ability to cause disruptions and impact business operations, potentially resulting in financial losses, impediments to trading, the inability of Fund shareholders to transact business, violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, and/or additional compliance costs.

GO PAPERLESS

FLEX Options Risk: The Fund will utilize FLEX options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable to, or unwilling to, perform their obligations under the contracts. In the unlikely event that the OCC cannot meet their obligations, the Fund could suffer significant losses. Additionally, FLEX options expose the Fund to liquidity risk. FLEX options may be more illiquid than other securities, including traditional options. To the extent that the FLEX options may not be expected to experience regular trading, the FLEX options held by the Fund may be valued based on a price quotation or other equivalent indication of value supplied by a pricing service, rather than based on a price last traded on an exchange. In less liquid markets for FLEX options, the Fund may have difficulty entering into or closing out certain positions at designated times and/or prices, including in connection with the monthly options roll process. With the creation and redemption of Shares, to the extent market participants are not willing or able to enter into FLEX option transactions with the Fund at prices that reflect the market price of the Shares, the Fund's net asset value ("NAV") and, in turn the share price of the Fund, could suffer significant losses. The Fund may experience substantial downside from specific FLEX option positions, and some may expire worthless. As a FLEX option approaches the predetermined expiration date, its value typically moves in parallel with the value of the underlying asset. However, prior to such date, the value of the FLEX options may not increase or decrease at the same rate as the underlying asset's share price on a day-to-day basis. The value of the underlying FLEX options will be affected by many market factors, such as changes in the underlying asset's share price, interest rates, the volatility of the underlying asset, and the remaining time to until the FLEX options expire.

Focus Risk: The Fund may be susceptible to an increased risk of loss, including losses due to events that adversely affect the Fund's investments more than the market as a whole, to the extent that the Fund's investments are focused in the securities of a particular issuer or issuers within the same market, asset class, industry, group of industries, or one or more sectors. In such event, the Fund's performance will depend to a greater extent on the overall condition of such market, asset class, industry(ies) or sector(s), and an economic, business, political, regulatory, or other occurrence affecting these such market, asset class, industry(ies) or sector(s) will have an increased impact on the value of the Fund's shares compared to the value of shares of a fund that invests more broadly.

Risks Related to Investing in the Information Technology Sector: Companies in the information technology sector are subject to rapid changes in technology product cycles, rapid product obsolescence, government regulation, and increased competition. Information technology companies are particularly vulnerable to failure to obtain, or delays in obtaining, financing or regulatory approval, and also are heavily dependent on patent and intellectual property rights. In addition, information technology companies may have limited product lines, markets, financial resources or personnel.

Geographic Risk: The Fund's investments in securities of issuers located in a particular country or geographic region may subject the Fund to certain risks to a greater extent than if its investments were less focused, including: natural, biological or other disasters and the spread of infectious diseases; economic, political and social instability; security concerns; and trade disputes with key trading partners. The securities in which the Fund invests and, consequently, the Fund are also subject to specific risks as a result of their business operations in a particular country or region, including, but not limited to:

Risk of Investing in Developed Markets: Investments in a developed country's issuer may subject the Fund to legal, regulatory, political, currency, security, and economic risks specific to developed countries. Developed countries tend to represent a significant portion of the global economy and have generally experienced slower economic growth than some less developed countries. Certain developed countries have experienced security concerns, such as war, terrorism and strained international relations. Incidents involving a country's or region's security may cause uncertainty in its markets and may adversely affect its economy and the Fund's investments. In addition, developed countries may be adversely impacted by changes to the economic conditions of certain key trading partners, regulatory burdens, debt burdens and the price or availability of certain commodities.

Risk of Investing in the United States: Investments in United States issuers may subject the Fund to legal, regulatory, political, currency, security, and economic risks specific to the United States. A decrease in imports or exports, changes in trade regulations, inflation and/or an economic recession in the U.S. may have a material adverse effect on the U.S. economy.

Issuer Risk: Fund performance depends on the performance of individual companies in which the Fund invests. Changes to the financial condition of any of those companies may cause the value of such company's securities to decline.

Market Risk: Turbulence in the financial markets and reduced liquidity may negatively affect issuers, which could have an adverse effect on the Fund and its investments. The Fund's NAV could decline over short periods due to short-term market movements and over longer periods during market downturns. Trade policy, including the imposition of tariffs, may dampen consumer spending and result in decreased confidence in the markets. Additionally, political uncertainty regarding U.S. policy, including the U.S. government's approach to trade, may also impact the markets. Furthermore, local, regional or global events such as war, acts of terrorism, the spread of infectious diseases, inflation and recessions, changes in interest or exchange rates, or other events could have a significant impact on the Fund and its

GO PAPERLESS

Sign up now for eDelivery of fund documents from Global X Funds at www.icsdelivery.com

investments and trading of its Shares. Market risk factors may result in increased volatility and/or decreased liquidity in the securities markets.

New Fund Risk: The Fund is a new fund, with limited or no operating history, which may result in additional risks for investors in the Fund. There can be no assurance that the Fund will grow to or maintain an economically viable size, in which case the Board of Trustees may determine to liquidate the Fund. While shareholder interests will be the paramount consideration, the timing of any liquidation may not be favorable to certain individual shareholders. New funds are also subject to Large Shareholder Risk.

Non-Diversification Risk: The Fund is classified as a "non-diversified" investment company under the Investment Company Act of 1940 ("1940 Act"), which means that the Fund may invest a greater portion of its assets in securities of individual issuers than a diversified fund. As a result, changes in the market value of a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds.

Operational Risk: The Fund is exposed to operational risk arising from a number of factors, including but not limited to human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes, cyber security incidents, and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate for those risks that they are intended to address.

Options Premium Tax Risk: An option premium is not subject to taxation upon receipt but rather when such option is exercised, is sold or lapses. The Fund's investment strategy may limit its ability to distribute dividends eligible for treatment as qualified dividend income, which for non-corporate shareholders are subject to federal income tax at rates of up to 20% plus the 3.8% Medicare tax. The Fund's investment strategy may also limit its ability to distribute dividends eligible for the dividends-received deduction for corporate shareholders. For these reasons, a significant portion of distributions received by Fund shareholders may be subject to tax at effective tax rates that are higher than the rates that would apply if the Fund were to engage in a different investment strategy. You should consult your tax advisor as to the tax consequences of acquiring, owning and disposing of Shares in the Fund.

Risks Associated with Exchange-Traded Funds: As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk: The Fund has a limited number of financial institutions that may act as Authorized Participants and engage in creation or redemption transactions directly with the Fund, and none of those Authorized Participants is obligated to engage in creation and/or redemption transactions. To the extent that those Authorized Participants exit the business or are unable to process creation and/or redemption orders, such as in times of market stress, Shares may be more likely to trade at a premium or discount to NAV and/or at wider intraday bid-ask spreads, and possibly face trading halts and/or delisting from an exchange.

Large Shareholder Risk: Certain shareholders, including an Authorized Participant, the Adviser, an affiliate of the Adviser, or funds managed by the Adviser, may own a substantial amount of the Fund's Shares. Redemptions by large shareholders could have a significant negative impact on the Fund. If a large shareholder were to redeem all, or a large portion, of its Shares, there is no guarantee that the Fund will be able to maintain sufficient assets to continue operations in which case the Board of Trustees may determine to liquidate the Fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on a national securities exchange and may, therefore, have a material upward or downward effect on the market price of the Shares.

Listing Standards Risk: The Fund is required to comply with listing requirements adopted by the listing exchange. Non-compliance with such requirements may result in the Fund's Shares being delisted by the listing exchange. Any resulting liquidation of the Fund could cause the Fund to incur elevated transaction costs and could result in negative tax consequences for its shareholders.

Market Trading Risks and Premium/Discount Risks: Shares of the Fund are publicly traded on a national securities exchange, which may subject shareholders to numerous market trading risks. In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Shares, as well as disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of assets in the Fund or an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. The NAV of the Fund is calculated at the end of each business day and

GO PAPERLESS

Sign up now for eDelivery of fund documents from Global X Funds at www.icsdelivery.com

fluctuates with changes in the market value of the Fund's holdings. The trading price of the Fund's Shares fluctuates, in some cases materially, throughout trading hours in response to changes in the Fund's NAV.

Trading Halt Risk: An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

Turnover Risk: The Fund may engage in frequent and active trading, which may significantly increase the Fund's portfolio turnover rate. At times, the Fund may have a portfolio turnover rate substantially greater than 100%. For example, a portfolio turnover rate of 300% is equivalent to the Fund buying and selling all of its securities three times during the course of a year. A high portfolio turnover rate would result in high brokerage costs for the Fund, may result in higher taxes when Shares are held in a taxable account and lower Fund performance.

Valuation Risk: The sales price the Fund could receive for a security may differ from the Fund's valuation of the security, particularly for securities that trade in low value or volatile markets or that are valued using a fair value methodology (such as during trading halts). The value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's Shares.

PERFORMANCE INFORMATION

The Fund does not have a full calendar year of performance. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's returns and comparing the Fund's performance to a benchmark index. The Fund's performance is not necessarily indicative of how the Fund will perform in the future.

FUND MANAGEMENT

Investment Adviser: Global X Management Company LLC.

Portfolio Managers: The professionals primarily responsible for the day-to-day management of the Fund are Wayne Xie and Vanessa Yang, CFA ("Portfolio Managers"). Mr. Xie and Ms. Yang have been Portfolio Managers of the Fund since its inception.

PURCHASE AND SALE OF FUND SHARES

Shares of the Fund are or will be listed and traded at market prices on a national securities exchange. Shares may only be purchased and sold on the exchange through a broker-dealer. The price of Shares is based on market price, and because ETF shares trade at market prices rather than at NAV, Shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). Only "Authorized Participants" (as defined in the SAI) who have entered into agreements with the Fund's distributor, SEI Investments Distribution Co. ("Distributor"), may engage in creation or redemption transactions directly with the Fund. The Fund will only issue or redeem Shares that have been aggregated into blocks called "Creation Units". The Fund will issue or redeem Creation Units in return for a basket of cash and/or securities that the Fund specifies any day that the national securities exchanges are open for business ("Business Day"). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). To access information regarding the Fund's net asset value, market price, premiums and discounts, and bid-ask spreads, please go to www.globalxetfs.com.

TAX INFORMATION

The Fund intends to make distributions that may be taxable to you as ordinary income or capital gains, unless you are investing through a tax-advantaged arrangement such as a 401(k) plan or an individual retirement account ("IRA"), in which case distributions from such tax-advantaged arrangement may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Adviser and its related companies may pay broker-dealers or other financial intermediaries (such as a bank) for the sale of Fund Shares and related services. These payments may create a conflict of interest by influencing your broker-dealer, sales persons or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary's website for more information.
