

# RTX Complete

Unlimited precision—directly on your hardware.

RTX Complete is a premium, hardware-tied subscription that transforms your GNSS/INS system into a self-contained, high-accuracy powerhouse. By embedding entitlements directly onto the hardware, it eliminates the need for local license files, allowing you to move from field collection to office processing seamlessly and effortlessly.

## The "all-in-one" experience

RTX Complete creates a "zero-configuration" experience by bundling essential GNSS augmentation and post-processing tools into a single subscription:

- **Real-time precision:** Includes Trimble CenterPoint® RTX for high-accuracy corrections directly in the field.
- **Post-processing power:** Integrated Applanix® POSPac™ capabilities allow for robust data refinement after collection.
- **Self-contained powerhouse:** Your system is always 'feature-ready' and optimized to handle new signals and data formats without manual configuration.

## Total processing flexibility

Experience the freedom to process data your way. Because the license is tied to your hardware's serial number (S/N) and carried in a collected data set, users can process data on any computer in the office, field or home — without transferring local license files.

- **Supports all core modes:** Fully compatible with Applanix PP-RTX™, Applanix Single Base™ (SiB) and Applanix SmartBase® (SmB) processing.
- **Unlimited PP-RTX power:** Specifically for the APX V4, this license removes the 60-minute processing cap, allowing for unlimited duration post-processed RTX runs.
- **Worry-free re-processing:** Data collected with a valid license remains "unlocked," meaning physical processing can be carried out at any point in time — even after the expiration date.
- **Hardware-agnostic processing:** Since the license lives on the hardware, any data collected by the system can be processed by anyone, from anywhere.

# RTX Complete

Unlimited precision—directly on your hardware.

## Key benefits

- **Streamlined workflow:** No more manual "EID" activations; the license status is embedded directly in the raw data (T04) file.
- **Future-proof performance:** Includes a firmware warranty to ensure your hardware always runs the latest algorithms and supports the newest GNSS constellations.
- **Maximized ROI:** Save significantly compared to purchasing real-time and post-processing services separately.
- **Reduced support complexity:** The hardware-software model eliminates common license issues such as locking code conflicts or disappearing licenses.

## Simplified licensing & renewals

- **Transparent budgeting:** Enjoy predictable annual expenditures with multi-year stacking options (3 and 5-year plans) available at discounted rates.
- **Easy management:** Experience elegant renewals through the Trimble Applanix eStore.
- **Continuous innovation:** Always use the latest software and features to maximize competitiveness and productivity.

Harness the seamless versatility of RTX Complete
