

LivingWell Companion™ Home Set Up Guide

Step 1

Plug in the power cord to an outlet that is not controlled by a wall switch.

Step 2

At the back of the unit, **move the Power switch on the “I” position**. The status light will flash orange but will turn steady green once connected properly.

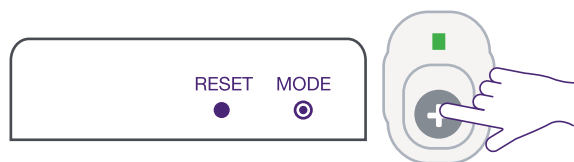

If the status light is flashing red, the wireless signal is not strong enough—move the unit to a better location and press the reset button.

Step 3

Perform a pendant range test by:

- Pressing the **MODE** button on the back of the base unit—an audio prompt will advise it is in **“Range Test Mode”**.
- Then **press and hold down the pendant button**, while walking around the home. You will hear a tone indicating a connection to the base unit. Any lapses in tone indicate an area of poor connectivity.
- Stop pressing the pendant button once range has been determined. Press the **RESET** button on the back of the base unit and it will announce **“System Ready”**.

Step 4

Test the service by **pressing the pendant button**. When the operator answers, identify yourself and advise this is your set up test call.
