# Introduction

The WCB3000N is a Wireless Extender with dual concurrent radios supporting both 2.4GHz and 5GHz operation. This allows the WECB to connect to everything from legacy wireless laptops, computers and gaming platforms up to the most current Apple and Android tablets, laptops, media platforms and smart phones.

The WCB works by being placed in a central location of the home, or in a location where the existing wireless signal is weak, and then being physically connected directly to your Telus gateway/modem. This physical connection not only extends the signal, but allows the WCB3000 to import and automatically configure itself with the same network ID/SSID and password that is currently in use and configured on your existing gateway/modem. This means that wherever you are in your house, your WiFi tablet, laptop or phone will automatically connect to Internet without you having to find a new network name or enter security keys.

For users with newer mobile devices, tablets and laptops, connections through the 5GHz radio can markedly increase the performance and speed of your WiFi connection while freeing up the 2.4GHz band for legacy or older devices.

## **Features**

- 2.4 and 5 gigahertz dual concurrent WiFi radios
- Two Gigabit Ethernet ports
- Integrated wireless networking with 2x2 802.11n access point
- Multiple security offerings: MAC address filtering, WEP, and WPA
- Other options: WMM and IP address management

# Getting to Know the WCB3000N

## Front Panel

The front panel features LEDs that illuminate in green when the operation of power, available ports and wireless bands are functioning and in use.

## Back Panel

- The WCB3000N has a 2 Port Gigabit Ethernet Switch utilized for Ethernet installation of the device.

## Wireless Network Extender

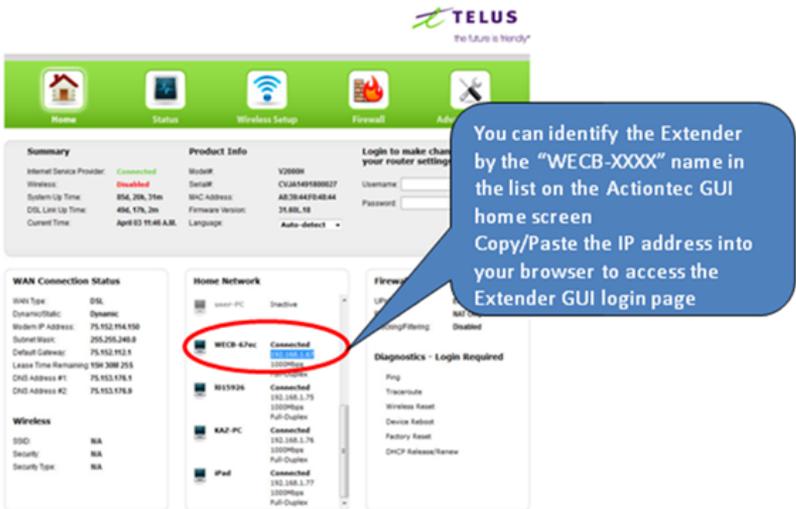

- The Coax/MoCA connector is not used nor supported for Telus installation.
- Reset Button: Holding the reset button down for 10 seconds will restore the unit back to the original factory default settings.
- The Power port is used to connect the Power Cord to the WCB3000N.
- The label indicates the factory default GUI access username, password, Network SSID names and security keys.

# Accessing the Extender's GUI

To configure the settings of your WCB3000N Wireless Extender:

1. Ensure that your WCB3000 WiFi Extender is connected to your Actiontec or Zyxel gateway/modem, and that both units are powered on.
2. Log in to your Actiontec or Zyxel gateway/modem by entering 192.168.1.254 into the address bar of your Internet browser. The IP address of your WCB3000N should be displayed on the main or Home page of the Actiontec and on the Status page of the Zyxel.
3. The Extender's GUI "Status" screen appears, as shown below.

## Wireless Network Extender

- When you determine the IP address assigned to your WCB3000 and then enter that IP address into the address bar of your browser, you will be led to the WCB3000N graphical user interface (GUI) Login page.

The screenshot shows a web browser window displaying the login page for the WCB3000N. The page has a light blue background and the title 'Login' centered at the top. Below the title, there are two input fields: 'User Name:' and 'Password:'. Below these fields is a language selection dropdown menu currently set to 'Auto-detect'. To the right of the dropdown is a green 'Login' button and a red 'Forgot Password?' link.

- Enter “admin” (all lower case) for the User Name and for the Password, enter the password indicated on the label located on the back of the WCB3000N.

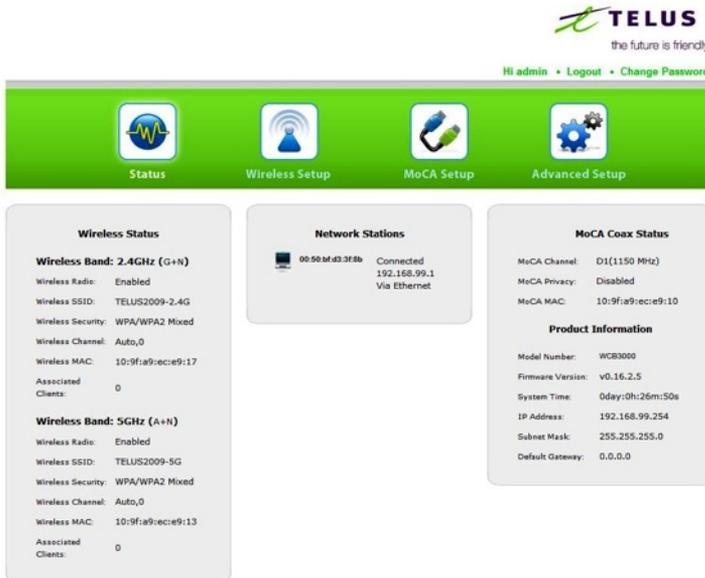

# System Preferences

The Wireless Network Extender features an onboard graphical user interface (GUI) that includes user-configurable settings. Some of these settings should be accessed by experienced users only.

## Status

The first GUI screen that appears is the “Status” screen. This screen contains basic information about the Extender’s wireless connection, network status, MoCA status, and information about the Extender’s firmware. There are no configurable settings available in this screen.

192.168.99.1  
Via Ethernet

**MoCA Coax Status**

MoCA Channel: D1(1150 Mhz)

MoCA Privacy: Disabled

MoCA MAC: 10:9f:a9:ec:e9:10

**Product Information**

Model Number: WCB3000

Firmware Version: v0.16.2.5

System Time: 0day:0h:26m:50s

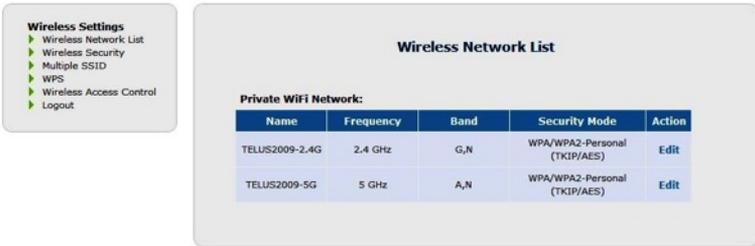

IP Address: 192.168.99.254

Subnet Mask: 255.255.255.0

Default Gateway: 0.0.0.0

## Wireless Setup

Selecting “Wireless Setup” from the menu bar of any of the Extender’s GUI screens generates the “Wireless Network List” screen. Additional wireless settings can be accessed from the menu on the left side of the screen. These settings configure various aspects of the Extender’s wireless network, and the majority of them should be adjusted by an experienced user only. The exceptions are the settings contained in the “Wireless Security” screen.

## Wireless Network List

Selecting Wireless Network List from any GUI screen generates a “Wireless Network List” screen (above). This screen displays various characteristics of the Extender’s wireless networks. Clicking “Edit” generates the “Wireless Security” screen.

### Wireless Security

The “Wireless Security” wireless network screen contains various settings regarding the Extender’s wireless network security.

**Note:** The Extender is automatically configured with the router/gateway’s wireless settings (including security settings) after being connected to the Ethernet network. We recommend that all wireless security changes be performed on the router/gateway as its wireless settings will update automatically to the WCB3000N.

#### Wireless Security

Wireless Operation Frequency:  2.4GHz  5GHz

Multiple SSID:

Wireless Network Name:

Wireless Band:

Wireless Data Rate:

SSID Broadcast:  Enable  Disable

Wireless Channel Width:

Wireless Channel Number:

---

**Security Settings:**

OPEN  
No Security Applied

---

WEP  
Simple WEP Security (64 or 128 bit hardware key)

MODE:  OPEN  Shared  Auto

Key 1:   Primary Key

Key 2:   Primary Key

Key 3:   Primary Key

Key 4:   Primary Key

---

WPA  
Enhanced Security for Personal/Enterprise

MODE:  WPA  WPA 2  Auto

CYPHER:  TKIP  AES  Auto

Authentication Mode:  Enterprise (RADIUS)  Personal Shared Key

PSK KEY:

To change the wireless security settings on the Extender's network:

*(Note: to manually configure the wireless settings on the Extender, the "Auto Configure" check-box on the Advanced Set Up GUI page must be empty.)*

1. Select a wireless operating frequency (2.4 or 5 GHz).
2. Select an SSID.
3. Enter a "Wireless Network Name."
4. Select a wireless frequency band from the "Wireless Band" drop-down menu.
5. Choose "Wireless Data Rate" ("Auto" is recommended), and enable SSID Broadcast.
6. Select a security type. If WEP is chosen, enter one or more keys in the "Key" text boxes. If WPA is chosen, select a "MODE," "CYPHER," and "Authentication Mode," then enter a "PSK Key."

**Note:** WEP security is only available if the router/gateway is configured for WEP.

7. Click **Apply**.

## Multiple SSID

The "Multiple SSID" wireless network screen allows the Extender to form two different wireless networks, with one on each frequency. To do this, select the "Wireless Operation Frequency" (2.4 or 5 GHz), enable the "SSID State" and enter a name for the network. Finally, click **Apply**.

The screenshot shows the "Multiple SSID" configuration interface. It includes the following fields and options:

- Wireless Operation Frequency:** Radio buttons for 2.4GHz and 5GHz (5GHz is selected).
- SSID1 State:** Radio buttons for Enable and Disable (Enable is selected).
- SSID1 Network Name:** Text input field containing "TELUS2009-5G".
- SSID2 State:** Radio buttons for Enable and Disable (Disable is selected).
- SSID2 Network Name:** Text input field containing "TELUS2009-5G-2".
- Apply:** A green button at the bottom.

## System Preferences

### WPS

The “WPS” wireless network screen allows the Extender to accept wireless clients via Wi-Fi Protected Setup (WPS), an automatic wireless network connection protocol. Only experienced users should configure the settings in this screen.

#### WPS

Wireless Operation Frequency:  2.4GHz  5GHz

WPS:  Enable  Disable

Security: WPA-WPA2-Personal

Encryption: TKIP/AES

AP PIN:

**Enrollee Configuration:**

Enrollee's PIN:

Soft Push Button:

## Wireless Access Control

The “Advanced Wireless Setup” wireless network screen contains a number of advanced settings regarding the Extender’s wireless network. Only experienced users should configure these settings.

### Wireless Access Control

Wireless Operation Frequency:  2.4GHz  5GHz  Both

Multiple SSID:

Wireless Access Control Mode:

MAC Address:

Comment:

**Current Access Control List:**

Frequency	MAC Address	Comment	Access	Select
-----------	-------------	---------	--------	--------

# Advanced Setup

Selecting “Advanced Setup” from any of the Extender’s GUI screens generates the “Management” screen, along with other advanced settings accessed through the menu on the left side of the screen. These settings configure various administrative aspects of the Extender and its GUI. They should be adjusted by experienced users only.

**Advanced Setup**

- ▶ Management
- ▶ Change Password
- ▶ Factory Default
- ▶ Language Settings
- ▶ Logout

**Management**

Bridge Configuration IP Address: 192.168.99.254

Subnet Mask: 255.255.255.0

Default Gateway: 0.0.0.0

Auto Configure:

Reboot:

If the box next to Auto Configure is checked, then the Extender will always reflect and import SSID and security settings from the gateway. If you wish to configure the Extender manually with different settings than your gateway/modem, then uncheck this box.

## Management

The “Management” advanced setup screen (above) allows the Extender’s IP address settings to be modified. Only experienced users should change these settings.

## Change Password

The “Change Password” screen allows the user to change the password that allows access to the GUI. To change, enter the current password, enter and re-enter the new password, then click **Apply**. Be sure to write the password down and keep it somewhere safe, as it will be needed to access the Extender’s GUI.

The screenshot shows a light gray rounded rectangle titled "Change Password". On the left side, there are three labels: "Current Password:", "New Password:", and "Re-enter New Password:". To the right of each label is a white rectangular input field. Below the input fields is a green button with the word "Apply" in white text.

## Factory Default

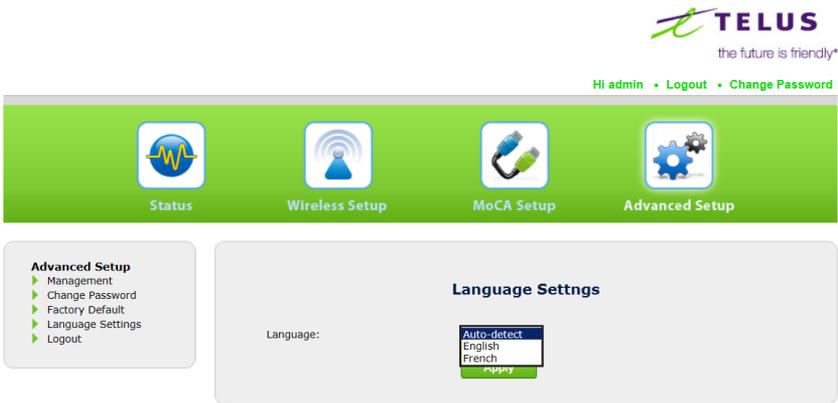

The “Factory Default” advanced setup screen allows the Extender’s factory default settings to be reapplied, erasing all current settings. Click **Restore Default Settings** to restore the Extender to it’s original factory settings.

The screenshot shows a light gray rounded rectangle titled "Factory Default". On the left side, there is a label: "Factory default setting:". To the right of the label is a green button with the text "Restore Default Settings" in white.

## Language Settings

The “Language Settings” advanced setup screen allows the Extender’s GUI language to be changed. Options include Auto-detect, English, and French. Selecting “Auto-detect” causes the Extender to automatically select the language (English or French) based on the language being used on the connected computer. To save changes, click **Apply**.

# Specifications

## Model Number

WCB3000N

## Wireless Security

- Wi-Fi Protected Access (WPA, WPA2)
- WEP, TKIP, AES Encryption
- Pre-Shared Key (PSK)
- MAC Address Filtering

## Wireless

- 802.11 a/b/g/n
- 2x2 antenna
- Wireless 2.4 GHz and 5 GHz Certified
- WPS Certified

## LAN Interfaces

- Two 10/100/1000

## Physical Specifications

LED Indicators

- 1 Power
- 2 Wireless
- 1 Coax (not in use for Telus installations)

## Specifications

- 2 Ethernet
- 1 WPS Button and LED

### External Connectors

- 2 RJ-45
- 1 Coax F Connector (not used for Telus installations)
- 1 DC Power Input
- 1 Factory Default Reset Button

### Hardware

- FlashRom 16 MB
- SDRAM: 64 MB

### Power Requirements

- Supply Voltage Range: 100VAC - 240 VAC (50/60 Hz)
- Power Consumption: Less than 7.2W +/- 5%
- Maximum Current: 1.5A

**Power**

External, 5V DC, 2A

**Regulatory**

FCC Part 15 & IC ICES-003 Class B

FCC Part 15C & IC RSS210

UL 60065

**Environmental**

**Operating temperature** - 0° C to 40° C (32°F to 104°F)

**Storage temperature** - 0°C to 70°C (32°F to 158°F)

**Operating humidity** - 10% to 85% non-condensing

**Storage humidity** - 5% to 90% non-condensing

**Note:** Specifications are subject to change without notice.
