DOT CONT ROL.

"Our app doesn't even have to be fast, it's enough that the user thinks it is fast"

Layers of Mobile Development

Thousands of iOS and Android APIs

Public web APIs

É

Backend integrations

Third party libraries

Memory, CPU and network constraints

- Mobile connection not always stable
- Bandwidth costs money
- Network calls take time

Network constraints

The eight fallacies

https://en.wikipedia.org/wiki/Fallacies_of_distributed_computing

1. The network is reliable.

2. Latency is zero.

3. Bandwidth is infinite.

4. The network is secure.

5. Topology doesn't change.

6. There is one administrator.

7. Transport cost is zero.

8. The network is homogeneous.

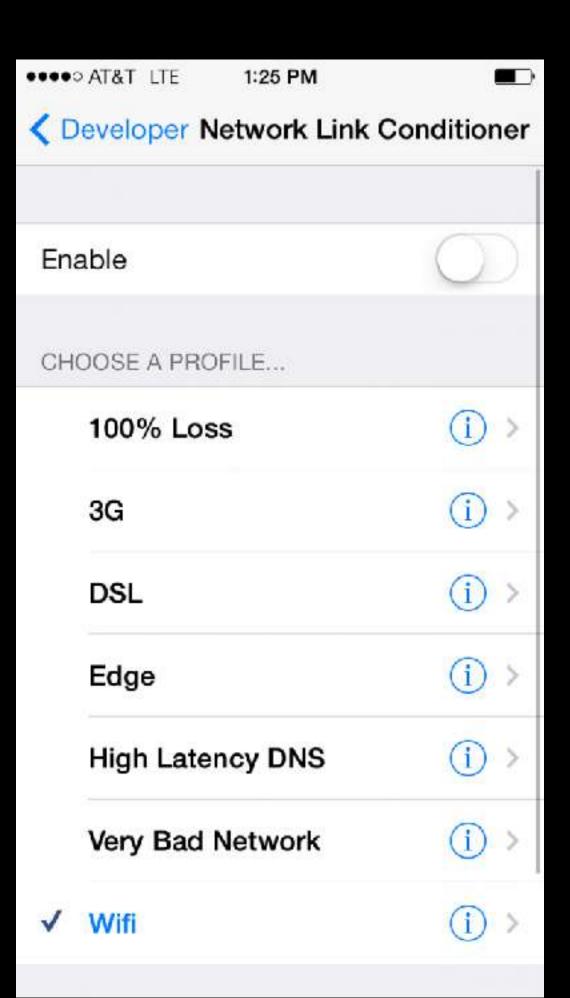

What Options Do We Have?

- Emulator/Simulator have options to mimic network conditions
 - Network Link Conditioner (iOS) https://developer.apple.com/download/more/? <u>q=Additional%20Tools</u>
 - Or on your physical device

Built into the Android Emulator (Stock/Genymotion)

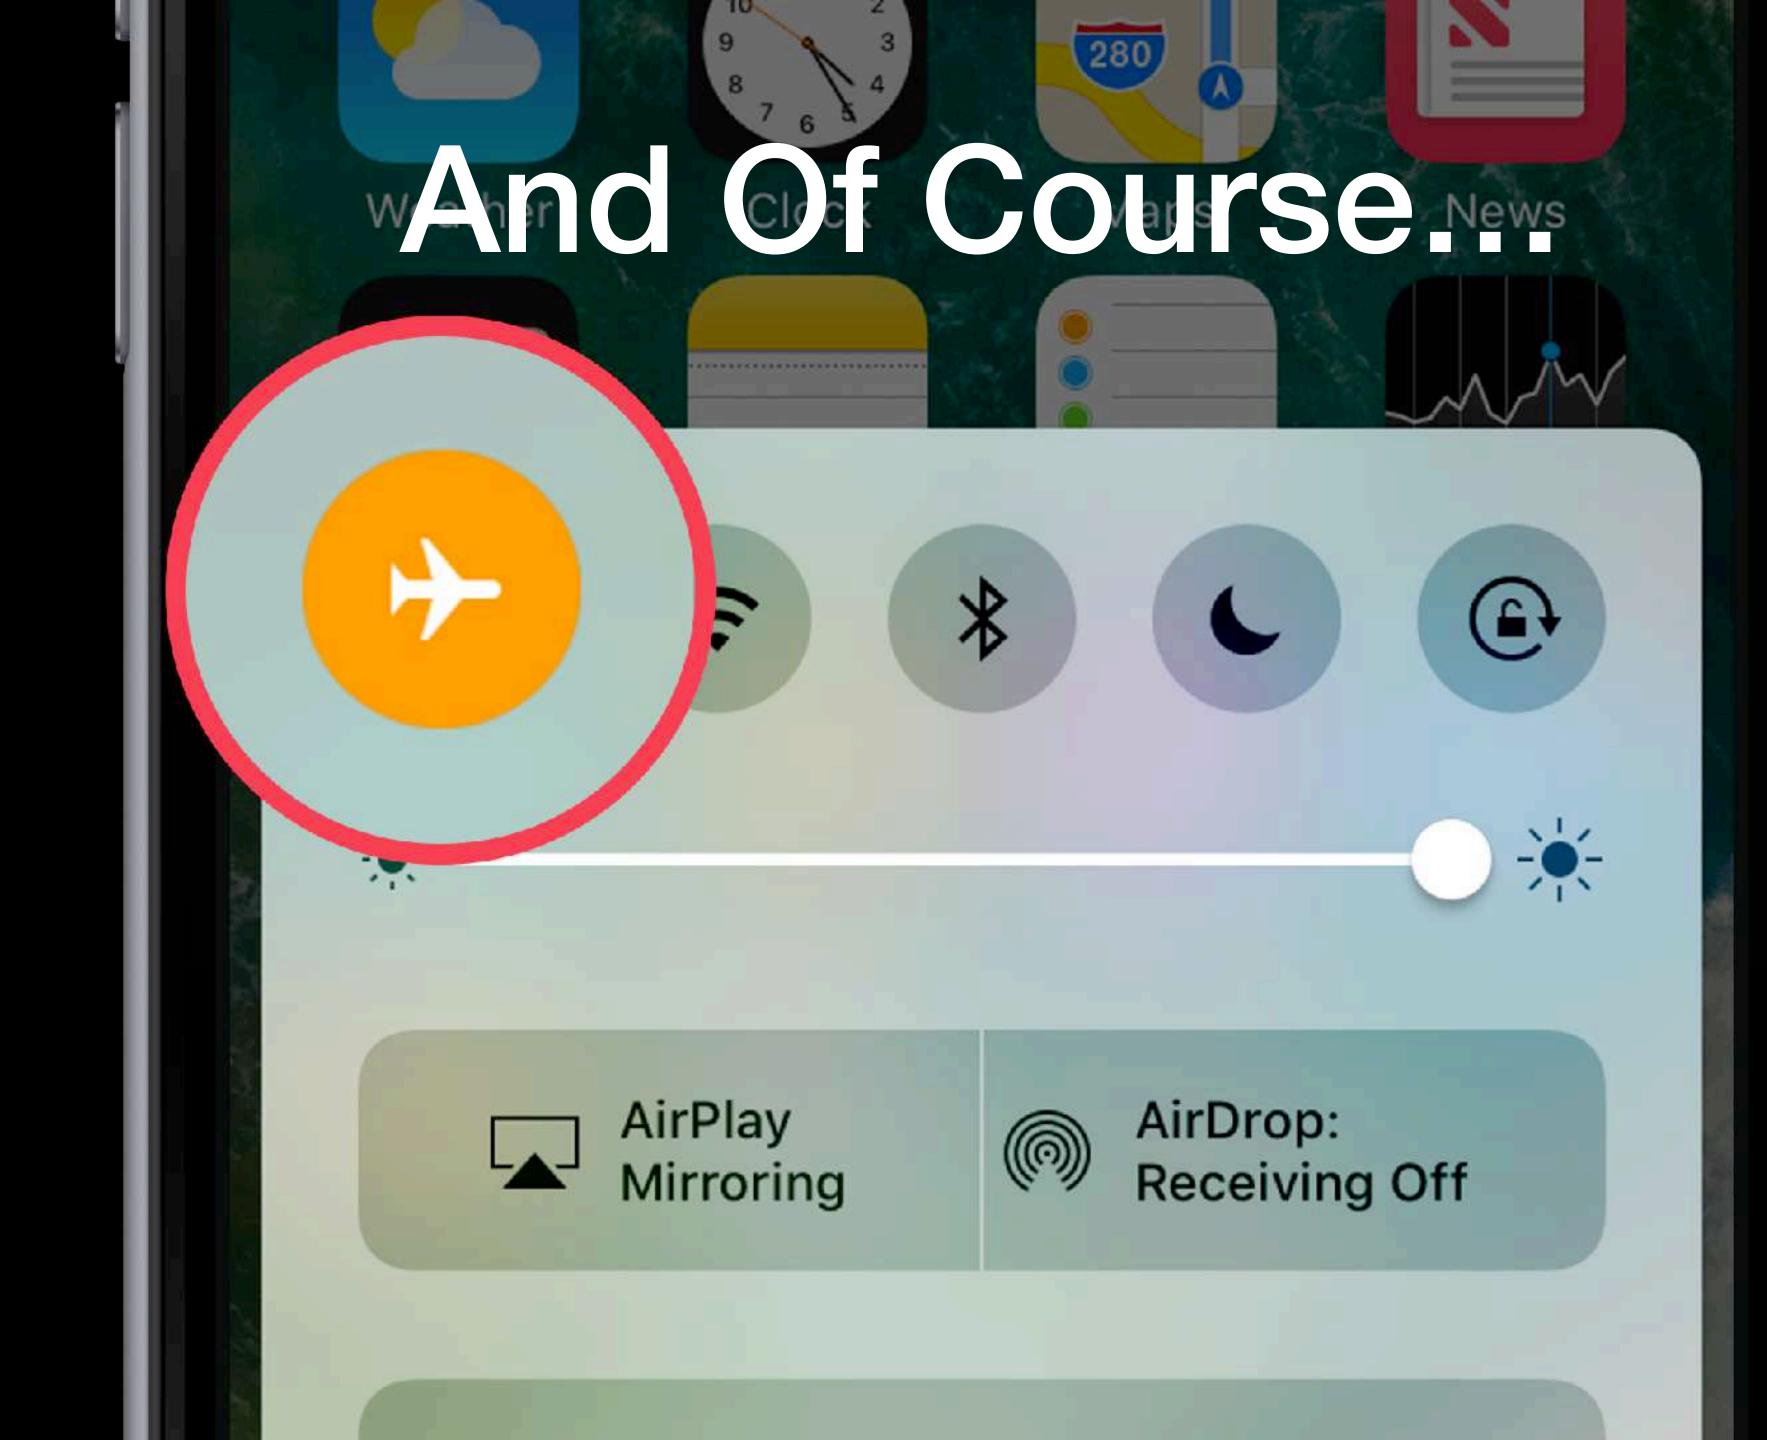

What Options Do We Have?

- know over the air..)
 - Charles (Windows/Mac/Linux)
 - Fiddler (Windows/Mac (Mono))
 - Wireshark (Windows/Mac) (if you like pain)
 - HTTPScoop (Mac)

Monitoring tool to see what is going over the line (or, you

Version 1.0

@jfversluis

The basics

Image source: https://www.themarysue.com/avengers-age-of-ultron-easter-eggs/

Avengers Assemble!

https://github.com/jfversluis/AirplaneModeProof

- Sample App
- Access information about each member
- See in which comics they appear
- Xamarin.Forms & ASP.NET Core backend (on Azure)

	Avengers Asse	emble
R	Spiderman	
	Captain Marvel	
	Hulk	
	Thor	
Ø	Iron Man	
	Captain America	Avengers Assemble
1	Black Panther	Spiderman
R	Black Widow	Captain Marvel
80	Doctor Strange	Hulk
Ś.	Hawkeye	Thor
		Iron Man
		Captain America
		Black Panther

ə 🎽 🖪 11:1

Version 2.0 Quick Wins!

Image source: http://knowyourmeme.com/memes/success-kid-i-hate-sandcastles

FFImageLoading

- Fast & Furious Image Loading
- Can cache images in-memory and on disk
- Deduplication of similar download/ load requests
- Retry image downloads

https://github.com/luberda-molinet/FFImageLoading

FFImageLoading

https://github.com/luberda-molinet/FFImageLoading

- Has more awesome features:
 - Transformations
 - SVG / WebP / GIF support
 - Loading and error placeholders
- Don't forget Init();!

Connectivity Plugin

https://github.com/jamesmontemagno/ConnectivityPlugin

- type, bandwidth, etc.
- Has methods to see if a
- in state

Check connection status

Information about connection

certain host is reachable

• Has events to catch changes

https://github.com/paulcbetts/refit

- REST calls
- interface
- time
- Not just for Xamarin!

Refit

• No more duplicate code to do

Implement the contract as an

Calls will be generated at compile

Version 3.0 Adding Akavaching

Image source: http://www.douglasequipment.com/hand-trucks/heavy-duty-warehouse-trucks-miami/

Implement Caching the Hard Way

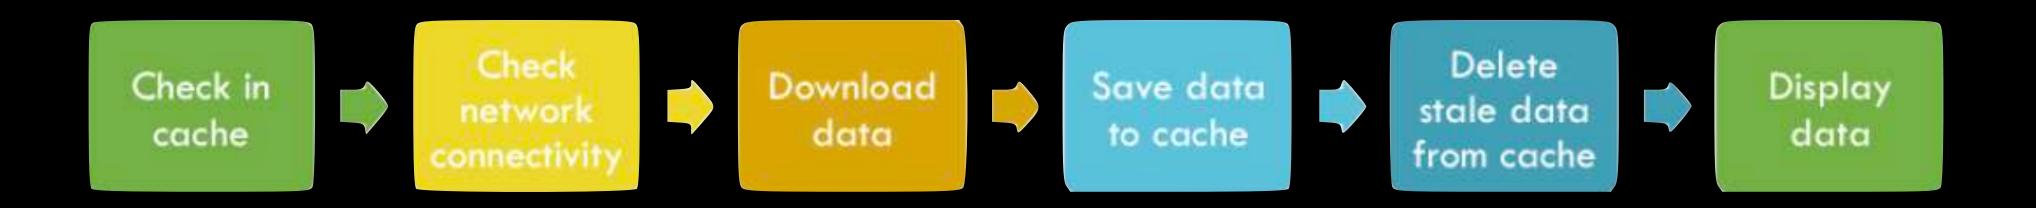

Image source: <u>https://codemilltech.com/akavache-is-aka-awesome/</u>

Akavache

https://github.com/akavache/Akavache

- "Asynchronous, persistent key-value store based on SQLite3"
- Caching is important
 - Network resiliency
 - Perceived app performance
- Not just for Xamarin!

Akavache: Lessons Learned

- - On mobile a bit hard because of the lifecycle
 - Wrap in a repository pattern
- Alternative: Monkey Cache by James Montemagno

https://github.com/akavache/Akavache

 Add the Akavache.SQLite3 package and make sure you have the AkavacheSqliteLinkerOverride.cs file included

Shut down properly with: BlobCache.Shutdown().Wait();

Version 4.0

Join the Restlence

Image source: https://mmoexaminer.com/star-wars-needs-mmorpg-thats-official-canon/

https://github.com/App-vNext/Polly

- library"
- Defining policies for failed requests 0
- Not just for Xamarin!

• ".NET resilience and transient-fault-handling

More info: <u>http://www.thepollyproject.org/</u>

Policy	Premise	Aka	Mitigation
Retry	Many faults are transient and may self-correct after a short delay.	"Maybe it's just a blip"	Allows configuring automatic retries.
Circuit-breaker	When a system is seriously struggling, failing fast is better than making users/callers wait. Protecting a faulting system from overload can help it recover.	"Stop doing it if it hurts" or "Give that system a break"	Breaks the circuit (blocks executions) for a period, when faults exceed some
Timeout	Timeout Beyond a certain wait, a success result is unlikely.		Guarantees the caller won't have to wait beyond the timeout.
Fallback	Things will still fail - plan what you will do when that happens.	"Degrade gracefully"	Defines alternative value to be returned (or action to be executed) on failure.

Poly

Version 5.0 CAMP Conceronal RECUESIS

Image source: https://mmoexaminer.com/star-wars-needs-mmorpg-thats-official-canon/

HTTP Conditional Requests

https://developer.mozilla.org/en-US/docs/Web/HTTP/Conditional_requests

- "HTTP conditional requests are requests that are executed differently, depending on the value of specific headers."
- Only returns data if something changed
- If-Match, If-None-Match, If-Modified-Since, If-Modified-Since and If-Range
- Most common use-case is caching

- Write less redundant code with Refit
- Keep in mind the limitations of a mobile device
- Give the user the perception of speedy loading
- More optimizations possible with **If-None-Match** and/of **If-Modified-Since**
