

ASP.NET SignalR

Challenges & Opportunities

Dino Esposito

Server-side code pushing content to connected clients

BROWSER

SERVER

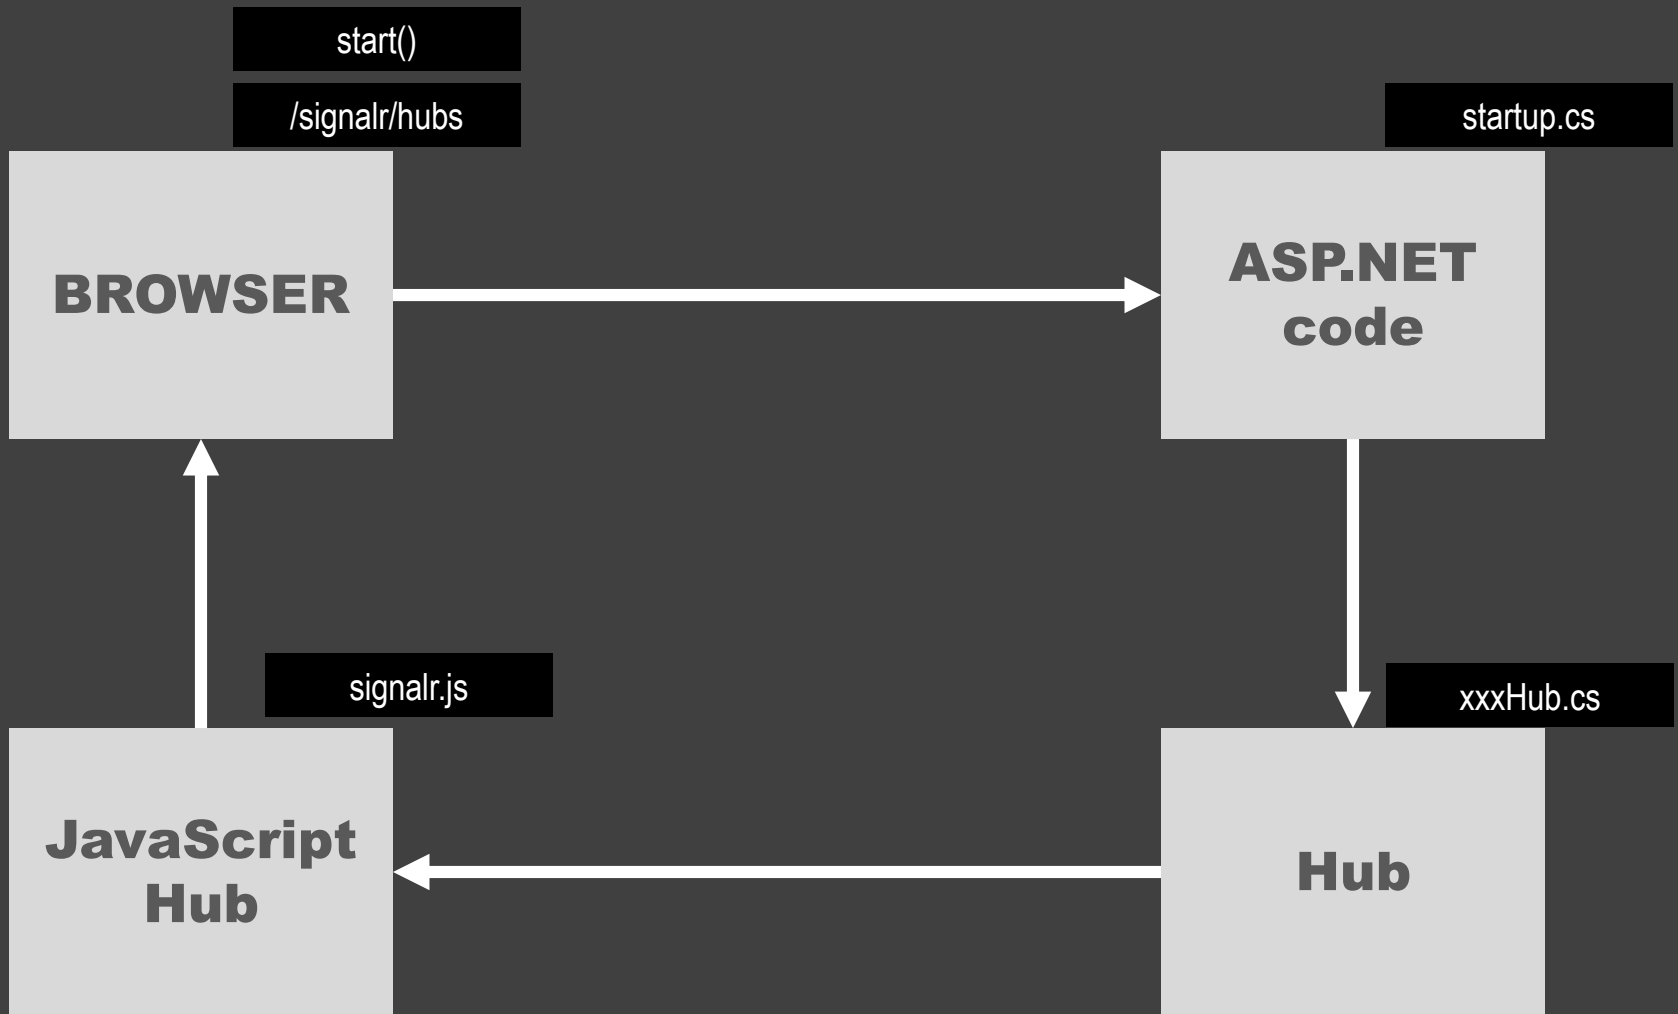

Possible Underlying Protocols

- **Web Sockets**
- **Server Sent Events (SSE)**
- **Long Polling**
- **Forever Frame**

WebSockets makes it possible to open an interactive communication session between the user's browser and a server.

With this API, you can send messages to a server and receive event-driven responses without having to poll the server for a reply.

Browsers and web servers must both support the protocol

BROADCAST

DIRECT

COUNTING

ASP.NET SignalR is fairly useful in CQRS applications to refresh the screen after a server-side operation.

ASP.NET SignalR is useful to notify views of relevant things that have happened in other pages.

ASP.NET SignalR is useful to monitor the progress of server tasks that proceed asynchronously.
