FAQs

Q: How does VitaTaste® work?

A: Simply put, VitaTaste® contains molecules that are similar to glucose molecules. Glucose is the sugar in our bloodstream you get from the food you eat. The molecules from VitaTaste® fill the receptors located on the external layers of the intestines, temporarily blocking the absorption of sugar molecules. And by blocking these receptors, VitaTaste® stops the absorption of sugar and processed carbs, which can then be excreted by the body as waste before they can be stored as fat.

VitaTaste® is also full of antioxidants, which cleanse the body from the inside, protecting it from free radicals and supporting the removal of fat and toxins.
