DR. CHEN® YOUTH EMULSION

This powerhouse formula defies visible aging with scientifically advanced Swiss apple and French grape stem cells, which help prevent wrinkles, fight free radicals, and inhibit UV damage. Plant-based squalane and vitamin B5 hydrate and protect while skin-plumping peptides support collagen production to reveal firmer, smoother, younger-looking skin.

INGREDIENT HIGHLIGHTS

SQUALANE (VEGETABLE DERIVED)

This natural emollient helps maintain skin's moisture, improve skin texture, fight wrinkle formation, and prevent premature aging of the skin.

RESVERATROL

A powerful natural antioxidant, resveratrol helps protect skin against free-radical assaults by neutralizing oxidative stress that can cause cell damage.

PANTHENOL

A form of vitamin B5, panthenol acts as a skin moisturizer, helping to keep skin soft, smooth, and healthy. It also supports the skin's natural renewal process and helps protect against future damage.

PEPTIDES

Peptides act as building blocks of proteins such as collagen, elastin, and keratin, which are the foundations of your skin and responsible for its texture, strength, and resilience. Peptides promote youthful elasticity of the skin and help diminish the signs of aging.

SPECIFIC PEPTIDE

Tripeptide-33 helps repair and prevent the signs of sun damage to help promote younger-looking skin.

FRUIT STEM CELLS

Our formula is powered by Swiss apple and French grapes, rich sources of phyto (plant) stem cells, which contain protective antioxidants that fight free radicals. Stem cells from Swiss apple help safeguard and condition the skin while smoothing out the appearance of fine lines and wrinkles. Stem cells from a prized French grape help inhibit free radical damage and effectively combat environmental stressors, including the damaging effects of UV rays.

BENEFITS

- Delivers intense hydration
- Promotes youthful elasticity of the skin
- Diminishes the signs of aging
- Helps protect and repair skin from environmental damage
- Supports skin's natural cycle of renewal
- Made without mineral oil and animal byproducts

USAGE

Apply a generous amount on clean face and neck. Smooth in gently. Use after toner and before moisturizer on days when you feel you need an extra hydration boost!

FAQ

Q: What are plant stem cells and how do they benefit the skin?

A: Plant stem cells are derived from plants and fruits known for their ability to maintain freshness for extended periods or to regenerate themselves naturally. Dr. Chen® Youth Emulsion harnesses the power of two types of plant stem cells: The first is *Vitis vinifera* fruit cell extract, sourced from prized French grapes. Rich in potent antioxidants, this ingredient effectively combats environmental stressors, including the damaging effects of UV rays.

The second type is derived from a rare Swiss apple's fruit cell culture extract. These stem cells contain protective antioxidants and moisture-attracting phospholipids, which help safeguard and nourish the skin while reducing the appearance of fine lines and wrinkles.

Always read the product label—use as directed.
