

## Hybrid Full Arch Dental Implants: Hands-on, Live Patient, and Online

In Association with Dental Implant Hero

30CE

The course covers treatment planning, surgery, conversion, prosthetics and complications management. We will discuss and practice both analog and digital surgical and prosthetic workflows. Prior to the course, attendees will gain access to an online course portion where they will be able to view two days of recorded lecture with comprehensive didactic training and recorded surgery. The in-person component will include hands-on practice on models. Each course participant will have the opportunity to observe or perform a full arch surgery on a live patient and do a same day conversion, as well as assist other course attendees.

### Learning Objectives:

- Learn the indications and treatment planning for full arch implants
- Learn predictable analog and digital workflows for surgery, conversion, and final restoration.
- Perform freehand and guided surgery on double-jaw models
- Perform full arch surgery on a live patient utilizing a stackable guide
- Understand how to recognize, avoid and rescue from complications

# Speaker

**Clark Brinton** graduated OHSU School of Dentistry as 2013 class valedictorian after training under Dr. Stanley Malamed in IV sedation during 3rd and 4th year. He served four years in the National Health Service Corps across rural New Mexico where he honed oral surgery skills and moonlighted providing IV sedation, 3rd molar and dental implant services. Clark practices in Portland, Oregon where he co-founded the Arvory Group which owns and manages 10 dental offices and a dental marketing group. Clark co-owns Hero Dental Lab to meet the growing and complex implant restorative needs inside and outside his practices. He continues as an unrecovered CE addict, constantly attending and teaching implant courses. Clark is a faculty member of the Dental Success Network over implantology.
