

Full Arch and Digital Design Workflow In Association with Dental Implant Hero

21CE

The course covers full arch treatment planning, surgery, conversion, prosthetics and complications management. We will discuss and practice both analog and digital surgical and prosthetic workflows. We will do hands-on training for 3D printing, designing and fabricating surgical guides, and designing and printing of full arch provisional restorations. We will perform hands-on surgery on models using both guided and freehand approaches.

Learning Objectives:

- Learn the indications and treatment planning for full arch implants
- Learn how to use 3D printing in dental applications.
- Learn predictable analog and digital workflows for surgery, conversion, and restoration
- Perform freehand surgery on a model
- Perform simulated full arch surgery on a model utilizing a stackable guide
- Understand how to recognize, avoid and rescue from complications

Date: October 12-14, 2022

Time: 8 a.m. - 5 p.m.

Speakers: Dr. Clark Brinton,
Dr. Jesse Hollander

Type: Lecture/Participation

Audience: Auxiliary Team,
Dental Techs, Dentists, GP, Lab,
OMS, Perio, Prosthodontists,
Specialists, Surgeons

Tuition: \$4,999 collected by
Hero Dental

Location: Grand Wailea,
A Waldorf Astoria Resort
3850 Wailea Alanui Dr.
Wailea, HI 96753

Speaker

Clark Brinton graduated OHSU School of Dentistry as 2013 class valedictorian after training under Dr. Stanley Malamed in IV sedation during 3rd and 4th year. He served four years in the National Health Service Corps across rural New Mexico where he honed oral surgery skills and moonlighted providing IV sedation, 3rd molar and dental implant services. Clark practices in Portland, Oregon where he co-founded the Arvory Group which owns and manages 10 dental offices and a dental marketing group. Clark co-owns Hero Dental Lab to meet the growing and complex implant restorative needs inside and outside his practices. He continues as an unrecovered CE addict, constantly attending and teaching implant courses. Clark is a faculty member of the Dental Success Network over implantology.

Dr. Jesse Hollander is a general dentist with additional training in hospital dentistry. He is a graduate of Oregon Health & Science University Dental School. Following dental school, he completed a General Practice Residency at Queen's Hospital in Honolulu. During residency, Dr. Hollander had the opportunity to develop specialized skills in oral surgery, root canals, gum disease management, dentures, full mouth rehabilitation, and cosmetic dentistry. He incorporates these skills into the advanced treatment he provides his patients. Along with his other colleagues and staff, he strives to treat each patient as if they were his family.
