Re: 2017 Recycled Content of Nucor Steel Mill Products

Nucor Corporation is North America’s largest recycler, using approximately 21.1 million net tons of scrap steel in 2017 to create new products. Nucor uses Electric Arc Furnace (EAF) technology at all of its steel recycling facilities. EAFs use post-consumer scrap steel material as the major feedstock, unlike blast furnace operations that use mined iron ore as the major feedstock. Nucor has prepared the following information to help calculate the recycled content for products being used in “Green Building” applications or for projects in the LEED® certification program. These percentages are approximate and are based on the total weight of the products. The calculations are based on 2017 scrap steel delivered and hot metal tons produced and are defined in accordance with ISO 14021:2001. More specific product information may be available from facility representatives. You can find the division contact information here – [Click Here](#)

Nucor tracks the origin of scrap shipments to our mills. Nucor can approximate the amount of scrap recovered from any project site region. Nucor owns steel and steel products manufacturing facilities throughout the US that are often within 500 miles of the project site. Please refer to the LEED Contact List [Click Here](#), and contact the specific Nucor representative at the facility directly.
