BAR MILL GROUP

April, 2020

NUCOR BAR MILL DIRECTIVE ON THE RESTRICTION OF THE USE OF CERTAIN HAZARDOUS SUBSTANCES IN ELECTRICAL AND ELECTRONIC EQUIPMENT 2002/95/EC (RoHS), RECAST AS 2011/65/EU (RoHS 2) RECAST AS 2015/863/EU (RoHS3) DECLARATION

To whom it may concern:

Nucor is pleased to announce that to the best of our knowledge, the steel substrate in standard grades produced by all Nucor Bar Mill Divisions does not exceed the concentration limit in the table below. In addition, none of the hazardous substances in the table below are intentionally introduced to the substrate during the manufacturing process:

Substance	RoHS Limit (by weight in homogeneous material)
Cadmium & Cadmium Compounds	0.01%
Hexavalent Chromium	0.1%
Lead & Lead Compounds	0.1%
Mercury & Mercury Compounds	0.01%
Polybrominated Biphenyls	0.1%
Polybrominated Diphenyl Ethers	0.1%
Bis(2-ethylhexyl) Phthalate (DEHP)	0.1%
Butyl benzyl Phthalate (BBP)	0.1%
Dibutyl Phthalate (DBP)	0.1%
Diisobutyl Phthalate (DIBP)	0.1%

This includes all standard carbon steel products produced at our Nucor Bar Mill Divisions. Some Special Bar Quality [SBQ] and coated products may be produced with Chromium, Lead and Cadmium that may not comply with the Directive. Various thresholds and exemptions may apply to these products. Contact the Nucor Mill Division prior to SBQ or coated order placement to verify the product conforms to the applicable Directive concentration limits or is otherwise exempt from these limits.

Nucor also supplies information on its material safety data sheet (SDS), which are supplied to each purchaser and which are available to anyone at www.nucor.com/products/products/matrix/ or upon written request.
