Summary

There are many building materials on the market today. Why do you want to choose porcelain pavers for your external projects?

This one-hour course offers the participants the opportunity to learn about porcelain pavers in 2cm ($\frac{3}{4}$ "), 3cm ($1\frac{1}{8}$ "), and 5cm (2") for dry-lay installations over aggregates and with pedestal systems in different parts of the country.

During this hour-long session, participants will have the opportunity to view different outdoor living spaces installations and be inspired with best practices and creative inspirations to expand the use of porcelain pavers.

Case studies will be examined through the presentation.

Learning objectives

1. Understand how the "Porcelain Pavers" are made and how manufacturers have been committed to safeguarding environmental resources, protecting workers in terms of health, safety, and environment. You will learn some technicalities of the product and how its manufacturing preserves the environment and recycle waste material while keeping a safe working environment for workers.
2. Learn about the features and benefits of Porcelain Pavers and understand the advantages compared to other type of material used for exterior applications.
3. Learn the various installation methods to lay Porcelain Pavers in outdoor applications.
4. Learn through installation images how the Porcelain Pavers can fulfill an extensive array of exterior installations in various combination of size, looks, thickness, and patterns.
