GAUGED PORCELAIN TILE PANELS / SLABS

THE INNOVATION IN PORCELAIN

GBCI®

Delivery:

- Face-to-face
- Online

Duration:

1 Hour

AIA Course no.:

VDA-AIA012022

Provider #: 10009021

1 LU|HSW

IDCEC Course no.:

1 CE hour

NKBA:

0.1 CEU hour

Summary

This one-hour course offers the participants the opportunity to learn about gauged porcelain tile panels/slabs (abbreviated GTP/S) and its possibilities and benefits in terms of design while using a sustainable material.

The first part of the course discusses the porcelain material and how it can contribute to a green building, which includes human health and well-being, sustainability, equity, and resiliency with respect to the build environment.

Participants will get an overview on how gauged porcelain tile panels/slabs are moved around and installed in various applications. A case study with focus on sustainability and innovative design will be examined.

Learning objectives

1. Understand how the GTP/S is made and how manufacturers have been committed to safeguarding environmental resources, protecting workers in terms of health, safety and environment. You will learn some technicalities of the product and how it inspires new designs.
2. Learn about the benefits, characteristics and sustainability of gauged porcelain tile panels (GTP/S) and how to incorporate these details into your specification. A comparison with other materials is discussed.
3. Learn and get inspired by applications for gauged porcelain tile panel and slabs. Emphasis will be placed on the green side of GTP/S.
4. Understand how transportation and installation are important for a successful outcome of a project with GTP/S.
