

Identity Security Risk Assessment

Gain unprecedented visibility into your identity landscape—including AI agents, non-human identities, and the secrets that connect them. And uncover the hidden pathways that could leave your organization vulnerable.

The **award-winning** BeyondTrust Identity Security Risk Assessment continues to deliver comprehensive views of your identity attack surface. This **complimentary, no-obligation assessment reveals critical and previously undetected insights** across your on-premises and cloud identity providers—from human accounts with elevated privilege potential, to the non-human identities, AI agents, and exposed secrets that increasingly drive modern breaches.

CUSTOMER SUCCESS

“Within two hours, we had recommendations and detections in our environment that were actionable, and not only that, we saw a significant reduction in false positives.”

—Anna Essex,
Sr. Security Analyst, Polsinelli

Built on the BeyondTrust Identity Security Insights® product, the assessment uses **read-only connectors** to ingest data from your critical identity sources including on-premises, cloud and SaaS solutions like Active Directory, Entra ID, AWS, GCP, Okta, Ping Identity, Salesforce, and more, **without scale limitations**. It maps identities and their privileges across applications to reveal the **True Privilege™** of every account and the **Paths to Privilege™** an attacker could exploit.

KEY OUTCOMES

- ✔ **Unmatched Visibility**
Obtain a holistic understanding of your identity security posture across human, non-human, and AI agent identities, including the hidden Paths to Privilege that other tools miss.
- ✔ **Rapid Risk Reduction**
Identify critical identity vulnerabilities paired with actionable context, enabling you to rapidly reduce risk and focus remediation where it matters most.
- ✔ **Hardened Security Posture**
Improve your organization’s resilience by uncovering hygiene issues, exposed secrets, and the routes attackers could use to elevate privileges within your environment.
- ✔ **Audit- and Board-Ready Reporting**
Generate downloadable reports that translate technical findings into the language executives, auditors, and regulators expect to see.

A MORE COMPREHENSIVE ASSESSMENT

Our cutting-edge Identity Security Risk Assessment is organized into five distinct areas of concentration, each with dynamically updated metrics, plain-language context for what matters and why, and downloadable reports built for both security leaders and auditors.

1 Overview

A consolidated view of connected data sources alongside discovered assets, human identities, non-human accounts, AI agents, and secrets, so you can see the full composition of your identity fabric at a glance.

2 True Privilege

Focuses on the privilege themes introduced in the overview, the core of many account- and identity-based risks, and provides essential context for understanding other findings across the environment.

3 Security Themes

Examines whether foundational safeguards including technologies, configurations, and operational practices are both present and effective, so that the higher-order controls you rely on are built on solid ground.

4 Emerging Themes

Spotlights the newest and fastest-moving areas of the cybersecurity landscape, which are heavily dominated by **AI agents, secrets, and the intersection of the two**—so you can address risks that traditional identity tools miss entirely.

5 Findings Explorer

An interactive view of every Detection and Recommendation that Identity Security Insights has surfaced in your environment, with filters and tables that make it easy to prioritize, assign, and act.

Plus: Each section is written in clear, accessible language, explaining what it covers and why it matters, and every assessment can be downloaded as a comprehensive report that is ready to share with executives, board members, and auditors.
