

THALES SAFENET TRUSTED ACCESS + BEYONDTRUST

PROTECTING AND STREAMLINING YOUR IAM ENVIRONMENT

Unified Security

Enforce the right level of security at the access point for BeyondInsight and other applications in a single console

Convenient & Secure

Increase productivity and reduce workload in the service desk without compromising security or compliance

Simplified Authentication

Provide flexible, context-based and multi-factor authentication, and a broad range of strong authentication options to mitigate reliance on passwords

Organizations are constantly under the threat of security breaches in today's expanding privilege landscape. Privileged accounts are at greatest risk as they provide access to an organization's most sensitive assets. To maintain a strong security posture, organizations must ensure that only verified and validated privileged users can gain access to the BeyondInsight platform.

Privileged Access Management and Access Management: Better Together

Thales and BeyondTrust work together to minimize the risks associated with stolen or misused credentials. Thales validates identities and enforces access controls for privileged users logging into the BeyondInsight platform, while BeyondTrust provides privileged management features for privileged accounts, and manages passwords and privileged sessions.

SafeNet Trusted Access provides powerful protection for privileged accounts by enforcing access policies and multi-factor authentication (MFA) at the BeyondInsight login screen. This adds a layer of protection to your IAM environment.

SafeNet Trusted Access lets administrators create context-based, adaptive access policies that evaluate risk conditions continuously and enforce strong authentication where needed. Administrators can configure strict access controls for the BeyondInsight platform while enforcing less stringent access controls for less sensitive applications and regular users. SafeNet Trusted Access ensures the right people have access to the right apps under the right conditions.

By continuously applying authentication and enforcing rigorous access policies at the access point, SafeNet Trusted Access offers a Zero Trust approach to security that allows only verified administrators to access the privileged account management platform.

SafeNet Trusted Access integrates easily with BeyondTrust to provide an elegant solution that balances security and usability to protect all user accounts from misuse at the access point while enhancing reporting and visibility for compliance.

Protect & Streamline your IAM Environment

SafeNet Trusted Access integrates with the BeyondInsight platform to allow businesses to scale securely in the cloud, simplify compliance, and secure the access point.

Scale Securely in the Cloud

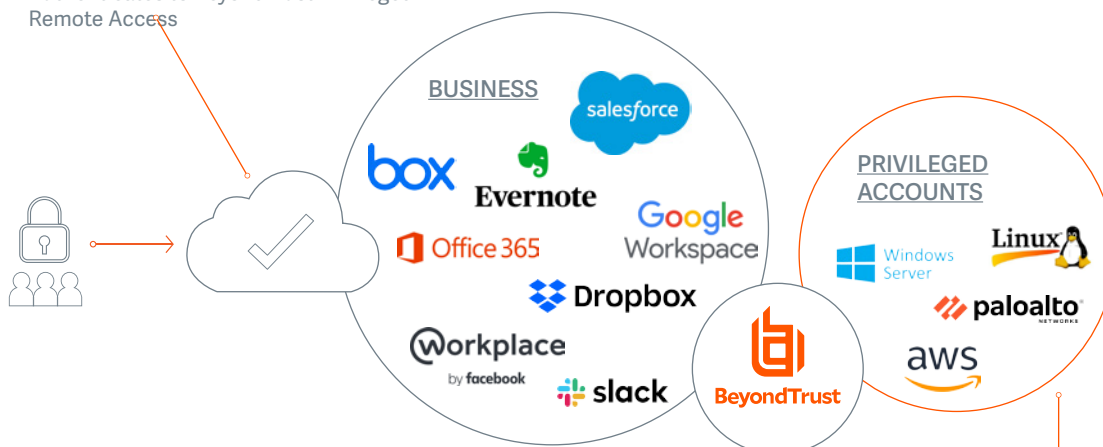

Access Management enables you to expand with the confidence that you are secure. Protect all cloud apps with centralized policies and a range of authentication methods.

Security at the Access Point

SafeNet Trusted Access enforces access policies and the appropriate level of authentication to admins accessing the BeyondTrust consoles, protecting them from unauthorized access and reducing the risk of a data breach.

Regular Users

- Authenticates regular & privileged users
- Applies conditional policies & SSO to all apps
- Authenticates to BeyondTrust Privileged Remote Access

For Privileged Accounts

- Stores passwords
- Manages & rotates passwords
- Isolates, monitors, & records privileged sessions

BeyondTrust is the worldwide leader in Privileged Access Management (PAM), empowering companies to secure and manage their entire universe of privileges. The BeyondTrust Universal Privilege Management approach secures and protects privileges across passwords, endpoints, and access, giving organizations the visibility and control they need to reduce risk, achieve compliance, and boost operational performance.
