# Mapping Your Nx Journey: Step-by-Step

## 1 Project Introduction

In this session we understand your current project structure, whether you're utilizing monorepo or polyrepo, Nx adoption stage, challenges faced, and the documentation available. This meeting helps identify the key areas to focus on during the consultation.

## 2 Exploration & Identification

Our experts, having a deep understanding of your project, will provide strategic solutions—from partitioning apps and packages, setting up CI tools for continuous release, introducing custom workspace generators, and understanding build chain implications.

## 3 Develop Improvement Suggestions and Goals

After a comprehensive understanding of your project, we'll develop an improvement plan, providing guidelines on implementing Nx best practices, CI configurations, monorepo processes, and efficient caching via Nx Cloud.

## 4 Prioritization & Dependencies

Recommendations are prioritized based on their potential impact and dependencies on other pieces of the code. To ensure swift and value-driven outcomes for your organization Our experts will design a focused Nx migration plan, prioritizing steps for immediate impact and alignment with your business goals.

## 5 Measurements & Tracking

Our team will provide you with the perfect set of tools to track your build times, CI agent utilization, test coverage, developer productivity and general time saved by Nx.

# Nx Transition: What You'll Gain

## Nx Consultation Document

A comprehensive guide on leveraging Nx for optimized software development, highlighting differences and benefits of monorepo over polyrepo.

## Nx Migration Manual

The manual includes a strategic roadmap for your Nx adoption, actionable suggestions, and best practices. A review meeting follows to discuss the report's findings.

## Follow-Up Review

Post-consultation, we schedule a session to gauge the effectiveness of our recommendations, ensuring your team is aligning with the desired goals.

## Execution Control

After an agreed period, our team revisits to monitor the implementation of our recommendations, ensuring you're on track to maximizing the benefits of Nx's build chain and other features.

# What others say about us

Michael and his team are phenomenal all around and were absolutely critical in implementing new practices and technologies into the ClickUp platform to ensure lightning fast speed on the frontend.

Their team solved complex engineering challenges and enabled us to continue delivering a world-class product. We could not have solved speed issues without Michael and his team!

**Zeb Evans,**  
Founder & CEO at ClickUp

I invited Michael to give us an educational session about his rx-angular suit and ways to improve the performance of our large-scale Angular applications in general. The session was just excellent with deep dives into different important areas like Angular change detection, rxFor and rxLet structural directives, change detection, task scheduling, concurrent rendering and much more. The session was very interesting with many questions and answers.

**Andriy Malish,**  
Frontend Software Engineer at Microsoft
