

Protecting its wealth management systems and customers from cyberattacks with Elastic Security

“Elastic Security gives us more freedom to do things such as automating processes, enriching data, and filtering false positives. The impact of that value can be multiplied across the organization.”

–Maxime Rousseau, Chief Information Security Officer, Personal Capital

PROFILE

About: Personal Capital is one of the country’s leading wealth management and financial advice organizations.

Industry: Financial Services

Location: United States

GOALS

- Protect the company against cyber threats while ensuring the availability of applications, data, and other technologies.
- Automate the ingestion and transformation of data from all sources to meet the needs of stakeholders

SOLUTIONS

- Utilizing the **Elastic Security** solution using **Elastic Cloud** on **AWS** for data management and security analysis, including endpoint and cloud security monitoring.
- Elastic is also used to facilitate the company’s internal vulnerability and patching management.

RESULTS

- Faster threat detection and resolution
- Comprehensive data gathering and error detection
- More flexible and cost-effective response to regulation
