Sydney Airport

Master Plan 2045 Environment

Sydney Airport, like all major airports around the world, has an impact on the environment. We aim to manage and minimise these impacts by taking steps to operate sustainably and help protect our community and surroundings.

We take a proactive approach, working with government, First Nations enterprise, local stakeholders and partners to reduce our impact.

Our key focus areas

Master Plan 2045 sets out our plans to manage and minimise our environmental impacts. It includes an Airport Environment Strategy that details our action plans for the next five years. These plans guide us in continuously improving how we manage environmental issues while supporting the airport's growth, focusing on three key themes:

- **Pollution Management:** We focus on improving air quality, protecting surface water, controlling ground-based noise, and managing contamination risks to safeguard the health and wellbeing of our local community
- **Flora, Fauna and Heritage:** We're dedicated to protecting and preserving flora, fauna and cultural heritage, including First Nations heritage, across Sydney Airport's precinct
- **Sustainability:** Our efforts include reducing greenhouse gas emissions, striving to use natural resources wisely, and managing waste effectively to shrink our environmental footprint
