Master Plan 2045 Airfield upgrades

Our Master Plan 2045 includes upgrades to improve the efficiency of the airfield, to create increased capacity for passengers, flights and airfreight. Minimising environmental impacts and promoting sustainable growth is a key priority whilst upgrading the airfield.

New taxiways and aircraft parking areas

- › Make it easier for regional, domestic and international flights to connect in the proposed new T2/T3 Integrated Terminal
- › Facilitate the forecast increase in flights, providing more options for passengers

Improved facilities for airfreight

- › Enable the forecast increase in freight from 600,000 tonnes to 1.4 million tonnes annually by 2045. Sydney Airport handles around 50% of Australia's international air freight, making it Sydney's key freight hub
- › New and improved freight facilities

New airfield infrastructure

- › Additional storage at aircraft gates for equipment used to service and support aircraft operations, improving efficiency and safety
- › Expand existing aviation fuel facility
- › Improve air navigation and surveillance, benefiting safety, airlines, airport operations and passengers

We'll keep doing our part to protect the environment and reduce emissions where possible as the airport grows.

That means being ready for new, cleaner and more fuel efficient aircraft and supporting the use of Sustainable Aviation Fuel (SAF).

We will also continue to make sustainability front and centre of airport projects.
