

High-Quality, Low-Cost Green Electricity

When it comes to buying electricity, our High-Quality, Low-Cost Green Electricity is our most affordable and environmentally friendly way to power your business.

And because we only use 100% REGO certified renewable electricity, it will improve your bottom line and help you reach your sustainability goals.

Your challenge

Budgets are tight, expectations are high, and regulations are ever-changing. There's continued pressure to reduce costs without sacrificing the quality of the energy you buy and, where possible, to use green energy which will help you avoid paying a penalty to offset your carbon footprint. It's also the right thing to do, both for your business and the environment.

You may already be using a green energy supplier, but you might have concerns about just how green they actually are. We use our industry-leading insight and experience to advise on the right buying strategy for your business. We also make further recommendations on which other Co-op Power services will help you cut costs and your carbon footprint even further.

Our solution

Choose our High-Quality, Low-Cost Green Electricity, and you won't be buying energy via a traditional broker. You'll be buying energy from a partner you can trust - energy that we use ourselves. Unlike a broker, we're in the buying group with you, so our procurement and delivery interests are entirely aligned. All Co-op Power members - including the Co-op itself - share the same competitive energy prices and benefits. We use our scale and buying power to negotiate the best possible value and quality for our ever-growing consortium of businesses, just like yours so that you can save money whilst being more sustainable. No hidden costs. No risk of mark-up. No nasty surprises. Just 100% green electricity and peace of mind.

Cut costs

Reduce carbon footprint

Improved green credentials

Access to innovative products

It's what we do

The Co-op Power difference:

Unrivalled buying power you can trust

Since 1844, it's been the Co-op point of difference to find better ways of doing business. Unlike traditional brokers, we're in it with you. Everyone gets the same terms, the same great deal, and you get 100% renewable energy from a partner that you trust.

Strength in numbers

Our collective buying power is just one of our main benefits. By working together and pooling our energy buying with other organisations, we can negotiate the best price; plus a wide range of fantastic terms and benefits that only a handful of companies in the UK can achieve. It's this unique approach that's made us the largest co-operative energy buying group in the UK.

Fair. Transparent. Flexible.

No hidden charges or nasty surprises – just a flat, transparent fee for the services you use. So you know you're getting value for money.

Industry expertise and peace of mind

We navigate the market so our customers don't have to. Thanks to our industry knowledge and expertise, we have already secured the best possible price and competitive T&Cs on your behalf. The result? A robust contract which removes hassle and risk, delivers the best value, and gives you absolute peace of mind now, and in the future.

No take. No pay.

Unlike other service providers on the market, you'll only ever pay for the energy you use, and therefore you won't be charged a penalty if you use too much or too little, sound fair?

When we say green, we mean green.

Not all green claims are equal. When we say it, we mean it. We have a long history of taking the lead on the issues that matter most, so it's no surprise we do this with our energy too. We're proud to be at the forefront of the renewable energy industry. As part of our commitment to zero carbon, we've invested in five wind farms across the UK, and we've already cut our direct carbon impact by 50%.

100% renewable. It's what we do.

How we've helped others

Roadchef was looking to make serious savings on electricity supply for its multi-million pound estate. The team was tentative after some difficult experiences dealing direct with energy providers, where a lack of transparency around forecasting and budgets had soured relationships. But there was a real willingness to invest time in making the right long-term decision if it meant achieving lower bills and a more sustainable future.

“

I know I can trust them to do the right thing, they are completely transparent, investing time to understand our business needs, with easy access to expertise and a really smooth onboarding process.

Mike Jackson, Director of Supply Chain Management and Head of Charity, **Roadchef**

Green energy came as part of the package with Co-op Power, which was a real plus. **This has helped to reduce our CO₂ emissions by almost 11,000 tonnes** – the equivalent of travelling just under 40 million motorway miles. ”

Why choose Co-op Power?

At its heart, the Co-op Power offering is very simple. Businesses who join will benefit from the sheer scale of our consortium. Combining our buying power means we can reduce commercial risk whilst negotiating bigger and better discounts - savings that benefit everyone.

That's how we've saved our members over £100m in energy costs so far.

But it's not just about saving money; we're passionate about helping your business reduce its environmental impact too.

High quality 100% green REGO* electricity

Traceable and independently audited by Deloitte

*Renewable Energy Guarantees of Origin - provides transparency on the proportion of electricity suppliers source from renewable generation.

Open and transparent pricing

Do not charge commissions or conceal margins

We put our members first

We work with you every step of the way to save you time and money.
Our service is so good, we've won awards for it.

Continuous innovation

Added member value through negotiation and new products

Energy with integrity. Better value for all.
