

Discharge Summary

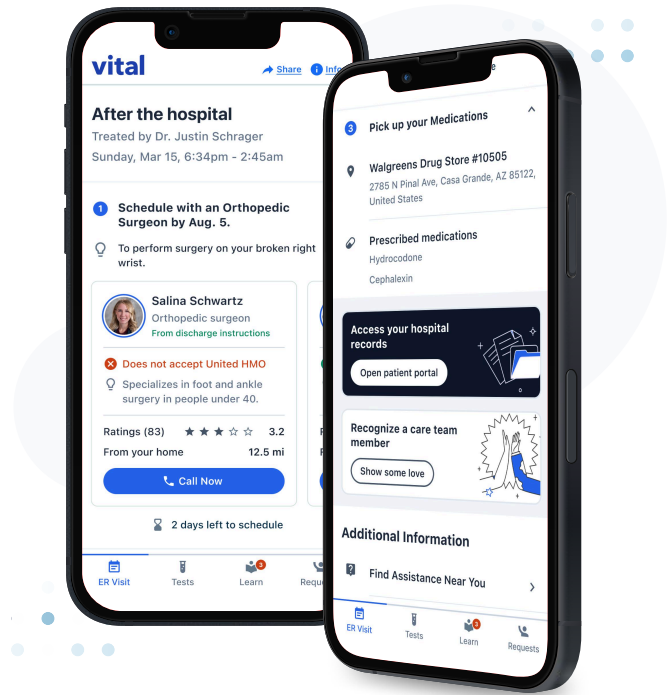

Personalized Patient Resources for a Better Discharge Process

Available in Vital Emergency & Vital Inpatient

Vital's Discharge Summary

Paper and portal-based discharge instructions can be challenging for patients to access, understand, and take action upon. Lengthy discharge documents full of complex medical terminology often cause confusion, which can result in readmissions, problems with medication and care plan adherence, and inadequate follow-up care.

By leveraging the power of artificial intelligence, Vital's Discharge Summary provides patients with important discharge instructions in a clear, easily understandable, and actionable manner based on data in the health record. Plus, patients can provide staff recognition, access the patient portal, and discover other hospital and community resources - all from one place.

HOW IT WORKS

AI-Powered Extraction

Our advanced AI technology extracts key actionable components from the discharge instructions for booking follow-ups and picking up medications, eliminating the need for patients to sift through pages of paper-based documents.

Personalized Task List

A user-friendly task list is generated, ensuring patients are well-informed about their responsibilities after discharge. This list includes important actions like PCP and specialist follow-ups, where to pick up their medications, signing up for the patient portal, care team recognition, and community resources for social and support services.

Engagement and Education

Patients are optionally presented with personalized video education content to better understand their diagnosis and engage in their own healthcare journey.

Key Resources

Patients may need to contact the hospital for several reasons after discharge. We provide them with links to the hospital's website where they can find general information, contact details, and billing or financial services help.
