# Preface

April, 2002

In this Statistical Annual Review Traffic and Transport of Amsterdam Airport Schiphol in 2001 you will find, as is customary, one section with text and one section of tables. The section of text consists of different explanations and graphs.

Should you require more information, feel free to contact the undermentioned department.

Note: Percentages show change compared to the preceding year

**The attacks in the United States on 11 September, among other things culminating in the collapse of the World Trade Center in New York, helped bring about a sharp downturn in global air travel this year. In the immediate aftermath of the attacks demand for passenger flights nosedived, with flights in North America being hit extra badly as a result of the air space being closed temporarily. Over the entire year international passenger traffic on scheduled services dropped worldwide by about 4%. The trend in passenger traffic in 2001 showed similarities with developments in 1991 when the Gulf War caused a drop in passenger flights. Then, it was American and Japanese passengers that tended to avoid Europe.**

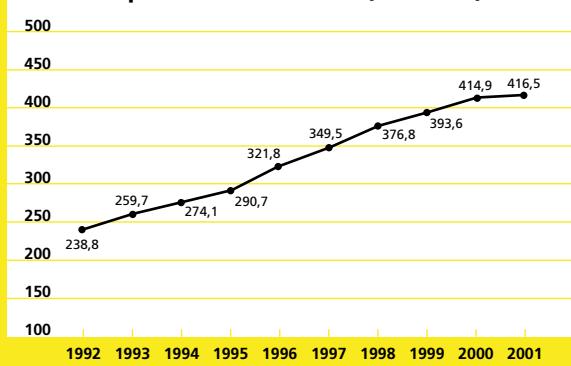

As far as cargo traffic was concerned, the check on economic growth which set in at the beginning of 2001 had already brought about a decline before 11 September. Scheduled European carriers were reporting this downturn from April onwards. A turning-point had already been identified in North America in December 2000. Worldwide, international traffic in cargo decreased by 8%. The downward trend in air travel resulted in extra security measures being introduced at Schiphol on the one hand, and expansion plans being put on hold on the other. One positive impulse for worldwide air travel was the falling price of kerosene. Since 1999 the price had been rising fast reaching its peak in November 2000. The result was that airlines were forced into putting up passenger ticket prices as well as cargo rates. However, from December 2000 onwards - urged on by the events

of 11 September - kerosene prices dropped to a level in December 2001 which was only half the peak prices in November 2000. As a result, KLM and its partner Northwest announced that they would be dropping their fuel surcharge from November 2001.

In relation to the worldwide trends in 2001 and the ongoing situation at other European airports, results at Schiphol fared better. Amongst the major group of airports (London, Paris, Frankfurt, Schiphol, Zurich and Brussels), Schiphol was the only one which ended the year with an almost identical number of passengers (-0,2% including transits) and aircraft movements (+0,4%) as in 2000. With the exception of February, month-on-month Schiphol made inroads in market share in passenger traffic. After 11 September the gains in market share were boosted by the decreasing number of flights to and from Brussels and Zurich as a result of the problems at Sabena and Swissair. The number of aircraft movements at Schiphol at the beginning of the year was strongly influenced by KLM's operation 'baseline'. With the introduction of its summer timetable in 2000, KLM started to focus on improving profits instead of generating volume. The effects of this were felt right up to April 2001. So during the first quarter, Schiphol also saw its market position with respect to the number of aircraft movements drop. The introduction of the winter timetable brought with it restrictions on capacity and fewer frequencies, which had been expected in the wake of 11 September. However, at Schiphol this did not result in a decrease in the number of destinations.

Cargo traffic at Schiphol was hit by the worldwide economic downturn. The 3,2% decrease was less than at other major airports, so that Schiphol was able to consolidate on its 4th placed position in Europe.

#### Air transport movements (x 1.000)

#### Passenger growth reasonable up until 11 September

The number of passengers in 2001 dropped marginally in 2001 to 39,5 million. The growth in passenger numbers before the 11 September attacks was still around 4%. However, in the period following 11 September this dropped by around

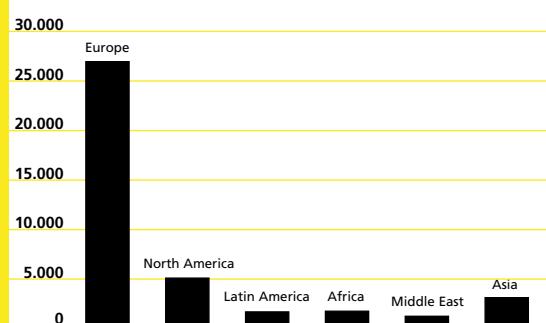

9%, thus cancelling out the growth which had been achieved. The number of Origin & Destination passengers (i.e. those who arrive at and depart from Schiphol) showed a modest growth of 2,2%. However, the number of Transfer passengers (i.e. those who change flights at Schiphol) fell by 3,2%, which was probably a result of the reticence on the American market.

Spain remained the most popular flight destination for Dutch holidaymakers. Turkey saw the number of tourists climb significantly. After the dip in 1999, caused by political unrest and earthquakes, the number of flights to this country recovered. In 2001 Turkey attracted 49% more holidaymakers from the Netherlands than in 2000. Italy, Portugal and Greece however, attracted hardly any more tourists than in the previous year. Tourism to the United States clearly continued to suffer as a result of the

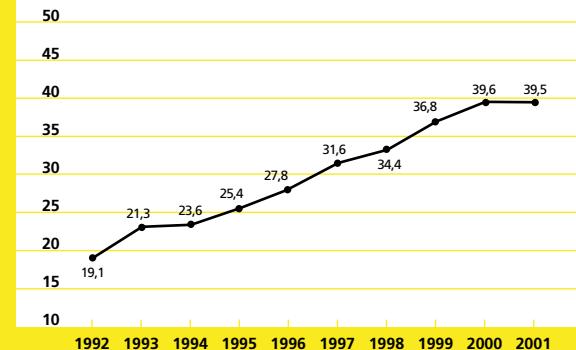

expansion in the network of low-fare carrier easyJet, the number of UK tourists increased significantly. Despite the relatively strong Pound for Dutch tourists, tourist traffic to the UK also increased. The strong Dollar also meant that the number of American tourists continued to grow during the first three quarters. However, the reticence shown by the American market after 11 September resulted in 20% fewer American holidaymakers.

Business traffic in particular decreased during 2001. During the first three quarters of the year, it was already showing a drop as a result of the economic downturn and the decrease in world trade. Business travel to the United States and Germany fell by more than average. Traffic to Asia however saw an upturn. After 11 September business traffic

**Passenger movements by continent**

**Passenger transport (x mln.)**

strong Dollar and the number of tourists decreased accordingly. After the events of 11 September, the country was completely shunned by tourists. As a result of the unrest in Israel, tourism to this country decreased significantly and after a number of years of strong growth, flights to North African destinations dropped too. As a holiday destination, South America started to recover. A number of destinations saw a sharp rise, including the Dutch Antilles, Surinam, Brazil and Peru. Thailand consolidated its leading position in Far East destinations with more than 40% more Dutch holidaymakers.

The Netherlands also became more popular amongst foreign tourists. Partly as a result of

to all destinations fell even more sharply as a result of business trips being postponed or cancelled. The number of transfer passengers dropped by 3,2%, resulting in a share of 40,8% in passenger traffic, excluding transit. As such, the share taken up by this segment was lower than in previous years. In the period prior to 11 September, the number of transfer passengers grew slightly (+2%) and took a strong downturn afterwards (-15%). Prior to 11 September this was caused primarily by KLM's strategy of focusing on profits rather than the generation of volume. This reduced capacity on destinations with low occupancy rates. A number of destinations were dropped altogether. There was a sharp fall in the number of German

passengers as a result of the KLM and Eurowings partnership being terminated at the end of April. After 11 September, it was the transfer sector in particular that experienced a sharp downturn as a result of American travellers being frightened away by the attacks.

With an upward swing in passenger traffic to European destinations, this region performed better than average. Charter flights to holiday destinations increased, mainly as a result of the strong positive influence of Turkey. A rise in numbers to Spain was caused partly by the new easyJet schedules to Barcelona, the expansion in capacity by Iberia to Madrid and the rapid growth of Transavia/Basiqair to Spain. Traffic to the UK also showed positive movement with a doubling of flights by easyJet.

With a drop of 10%, passenger traffic to North America showed the largest decrease by any region. This was all to do with the events of 11 September. KLM and its partner Northwest Airlines saw traffic to its hubs, Detroit and Minneapolis, decrease dramatically. More positive however was the upward trend in traffic to Chicago, where United Airlines in particular showed strong growth in addition to Montreal (KLM) and Miami (Northwest).

Destinations in the Middle East experienced an average decrease of 1% in passenger volumes. Because of the unrest in Israel during the first few months, many tourists chose to travel to other destinations and traffic volume fell sharply. In July and August, confidence seemed to have returned, but this was cancelled out by the events of 11 September and the escalating violence in Israel.

Destinations in the Middle East that saw an increase in 2001 were Lebanon, Syria and Saudi Arabia.

As in Europe, the Latin American and African regions saw an increase in passenger volumes, despite the downswing after 11 September. KLM ignored capacity restrictions to destinations in Nigeria and South Africa and frequencies actually increased.

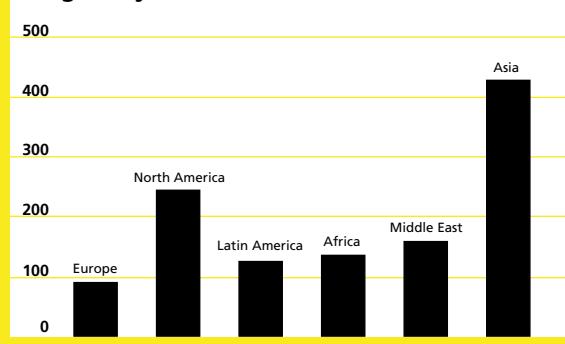

The continuing economic recovery in the Far East resulted in growth rates of more than 5% to this region prior to 11 September. For the whole of 2001 however, traffic decreased by 1%. The

partnership deal between KLM and Malaysia Airlines resulted in a sharp increase in flights to Malaysia and likewise to China as a result of the co-operation with China Southern. In addition, both countries became more popular as holiday destinations. Civil unrest in a number of countries was reflected in falling traffic figures, for example to the Philippines in the first half of the year, to Nepal from May to August and to Indonesia in August. India and Thailand showed impressive growth, in particular due to consolidation to these destinations by KLM, Northwest, Eva Airways and China Air.

#### **Decrease in cargo tonnage due to economic downturn**

After four years of limited growth, cargo turned in a poorer performance in 2001. In 2001 cargo tonnage was 1.183.208 tonnes representing a drop of 3,2% on 2000. The cause of this reduction was not the events of 11 September as such, but the economic downturn and decreasing world trade. Cargo traffic at other European airports decreased significantly more than at Schiphol, so reinforcing Amsterdam's fourth place in Europe. What's more, Schiphol concentrated its efforts not only on a increase in volume, but also on selected markets, where the emphasis is on accommodating high quality goods flows and optimising available capacity. Schiphol occupies a leading position with respect to traffic to and from Asia, Africa and the Middle East. Additionally it is important to maintain a good network to North America. These four regions have been designated as the four

#### **Freight by continent (x 1.000 tonnes)**

selected markets by Schiphol. Cargo traffic to these four selected markets shrunk by 1,4% in 2001. However, increases were achieved to Asia (+5%) and Africa (+11%). Cargo traffic to the Middle East dropped for the fourth year in succession by 6% to 158.636 tonnes. The main cause of this was the reduction in the number of cargo flights to Israel in the first half of the year.

After an almost unchanged situation with regard to cargo flights on the North Atlantic route in the past three years, in 2001 tonnage dropped by 12% to 244.776 tonnes. In 2000 the strong Dollar caused a decrease in incoming traffic and an increase in outgoing traffic to this region. The changing economic situation however, was responsible for the fact that cargo traffic in 2001 decreased sharply across the board.

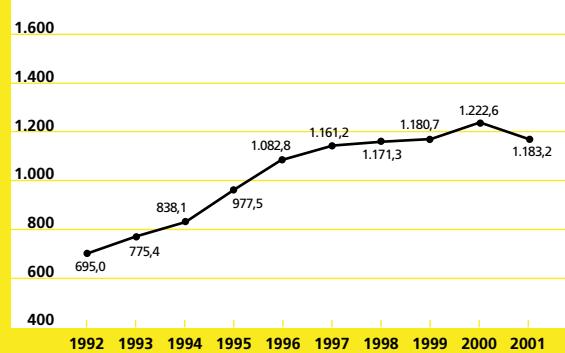

Cargo traffic to European destinations has fallen at an increasing rate in recent years. 2001 saw a decrease of as much as 29%.

The generation of volume at KLM was once again sluggish. The airline is concentrating its efforts on improving profits rather than on increasing volume. The Full-Freighter network within Europe continued to be stripped as a result. Moreover, on an intercontinental level, a number of destinations were scrapped and fleet deployment adapted.

Martinair has also intensified its efforts on the cargo market in recent years. Whilst the company went into the red, its cargo trade was the most profitable branch. For that reason fewer freighters were converted to passenger aircraft in the summer months, which means that extra cargo capacity was

available. Since the beginning of the eighties El-Al has been developing Schiphol as a cargo hub. By 1997 El-Al's volume had quadrupled, but since then this has diminished partly as a result of the airline's new policy of flying to more European destinations and partly as a result of the shrinking cargo capacity. Whilst volume appeared to stabilise in 2000, up to 11 September it dropped sharply in particular as a result of El Al's activity on the North Atlantic route. However, after 11 September, the number of cargo flights rose sharply, mainly on the back of El-Al's reputation as a 'safe' airline. 49,2% of the total cargo volume of 1.183.208 tonnes (representing 581.923 tonnes) was carried on full-freighters, which is the same level as in 2000. In contrast, the number of movements of full-freighters decreased by 1,7% to 11.683.

#### **Freight Transport (x 1.000 tonnes)**

## Aircraft movements according to type

	2000	2001	
1 Boeing 737	121.983	133.297	9,3%
2 Fokker 50	34.995	34.083	-2,6%

### Decrease in number of aircraft movements on introduction of winter timetable

As in previous years, the number of aircraft movements is strongly dictated by the co-ordination of slots. In order to reduce noise pollution, in 2001 Amsterdam Airport Schiphol was allowed to complete 440.000 aircraft movements in commercial traffic. Because of a larger than expected number of cancellations, in particular in the aftermath of 11 September, and as a result of the reduction in the number of slots after the winter timetable was introduced, in the end there were 416.462 flights, which represents a 0,4% increase in relation to 2000.

The number of nighttime aircraft movements in this sector decreased by 1,9% to 12.535.

Other traffic, consisting mainly of Taxi, Business and Private flights, diminished by 10,9% to 15.639 aircraft movements, with the result that overall traffic amounted to 432.101 in 2001.

### KLM and Martinair restructure network

After the partnership deal between KLM and Alitalia fell through, likewise a possible but complex merger with British Airways hit the buffers, so for the time being in 2001 KLM was left to continue under its own steam in Europe. The introduction of the summer timetable in 2000 signalled the start of operation 'base-line', the aim of which was to improve profits instead of generate volume. This meant that unprofitable services were scrapped, in particular, to destinations in Europe, South America and the Middle East. The number of KLM group flights, which increased by 10% in the first few months of 2000, were cut back with the introduction of the summer timetable. These cutbacks continued in the

2000/2001winter timetable. When the summer timetable commenced in 2001, a further round of cuts followed with the break-up of the partnership deal with the German Eurowings airline. KLM rival, Lufthansa, had taken up shares in the airline resulting in KLM having to operate to German airports on its own. This meant having to drop a number of destinations.

Martinair aimed to recuperate some of its profit by means of the operation 'red alert'. For example, capacity on the North American routes was halved and Far Eastern destinations were scrapped from the network altogether. On the other hand, efforts became more focused on its profit-generating cargo business.

Despite the restructuring of the Martinair network, the number of aircraft movements in the leisure market grew by 12,5%, a much sharper rise than the overall average growth at Schiphol. The leisure business consists of charter airlines as well as scheduled airlines, such as Tunis Air and Royal Air Maroc which focus specifically on destinations in the sun. Likewise this growth was higher than that achieved in 2000. In addition to Transavia, with its low-fare product Basiqair, which attained a 5% increase in aircraft movements, there were a number of other newcomers such as DutchBird, Hapag Lloyd and the recently revived Air Holland, which together were responsible for the rise in the leisure sector. The increasing popularity of Turkey was accompanied by a rise in the number of flights by Anatolia.

The low-fare sector was the sector with the largest growth. On the basis of the number of aircraft movements, easyJet has now become the fourth

largest airline operating from Schiphol. EasyJet continued to develop Schiphol as its home base and added more destinations to its network flying out of Amsterdam. The great majority of passengers travelling with easyJet were leisure passengers, but a significant proportion also travelled for business purposes.

#### No change in punctuality

The number of delays at Schiphol in 2001 increased marginally in relation to 2000. In 2001 64,1% of all passenger flights, including charter flights, left Amsterdam Airport Schiphol on time, which equals the departure punctuality achieved in 2000. The punctuality of passenger arrivals worsened slightly. In 2001 75,6% of incoming flights had a delay of less than 15 minutes, as opposed to 75,7% in 2000. In September, punctuality rates were hardly pushed

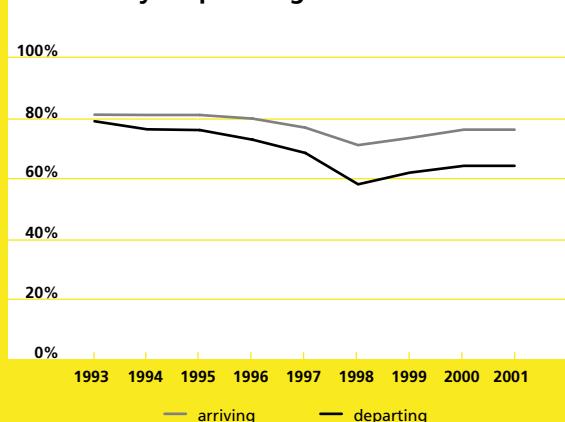

#### Fleet mix

The proportion of turboprop aircraft operating as a feeder within Europe continued to increase sharply in 2000. However, in 2001 the most significant drop in flights occurred in this sector. One of the reasons for this was the termination of the agreement between KLM and Eurowings, which conveyed transfer passengers to Schiphol. The number of narrow-body aircraft (including the Boeing 737) increased in 2001. One of the biggest causes of this was the relatively steep rise in the number of flights in the leisure and low-fare sector. In order to take full advantage of the available (noise) capacity and to consolidate Schiphol's competitive position, tariffs for some aircraft have increased whilst others have decreased. For example, a new set of tariffs was introduced in 1998 to differentiate between quiet and less quiet types of aircraft in order to stimulate the use of the very quietest types of aircraft at Schiphol. Since 2 June, the quietest types of aircraft have received a 10% discount on take-off and landing charges (previously 5%). Less quiet types of aircraft pay the standard charge, whilst the least quiet types of aircraft must pay a surcharge of 20% (previously 15%). This last category not only includes all Chapter 2 aircraft, but also the noisiest aircraft in the quieter Chapter 3 category. Furthermore, from now on Amsterdam Airport Schiphol will be determining the noise category of all aircraft individually (on the basis of the aircraft's official noise certificate) and no longer simply on the basis of the aircraft type. This is more objective because aircraft of the same type can generate differing levels of noise depending on the differences in take-off weight and engines. The number of Chapter 2 flights from Schiphol, which dropped by a third in 2001 to 428, will disappear completely as from April 2002 as a result of European regulations.

#### Network

As a result of the events of 11 September many airlines have cancelled flights for the winter period. The main emphasis was to retain the same number of destinations whilst cutting back on the frequency. At the end of 2001 it was possible to fly direct to 204 destinations in 82 countries from

#### Punctuality of passenger services

as a result of the attacks of 11 September, but mainly because of the poor weather. As a result, the number of non-punctual departing passengers was larger than the number of those departing on time. Bad weather was also a cause of lower punctuality rates in December.

In relation to other large airports in Europe, Schiphol is one of the best when it comes to arrival punctuality. The only airports to perform better are in Scandinavia, mainly due to their location beyond the busier European routes. As for departure punctuality, Schiphol is in the middle bracket of airports.

## Passenger destinations, scheduled services 2001 (end of the year)

	2000	2001
Domestic	2	3
Europe	108	104
North America	20	20
Latin America	22	19
Africa	20	20
Middle East	14	14
Asia	27	24
Total	213	204

Amsterdam Airport Schiphol. There were only three destinations in this total used exclusively for cargo purposes.

16 destinations were dropped in 2001 (including 1 cargo destination), whilst there were 7 new destinations. Overall therefore, the route network from Amsterdam Airport Schiphol lost 9 destinations. In relation to other European airports Amsterdam Airport Schiphol occupied fourth placed position, both in terms of destinations and frequencies.

The number of scheduled carriers operating at Schiphol was 86 at the end of the year. Eight of these airlines carried only cargo. Ten airlines stopped flights from Amsterdam in 2001, whilst 7 new airlines started operations from Schiphol in 2001.

The new airlines in 2001 were:

- US Airways, with 7 flights a week to Philadelphia since April 2001.
- Air Dolomiti, with 2 flights a day to Verona.
- Ethiopian Airlines, with cargo services to Addis Ababa since June and 2 passenger flights a week to Addis Ababa via Frankfurt since 6 December.
- Korean Airlines renewed passenger operations on 17 July with 2 flights a week to Seoul after having scrapped this service earlier in the year. However, Korean continued to operate cargo flights throughout.
- Trans Travel Airlines started 3 daily passenger to Groningen in September.
- Flymetropolis, a new Dutch regional airline, started 4 daily flights a day to Malmö from 26 November.

- Dutch Caribbean Airlines took over scheduled services to Curaçao in October from the bankrupt Air ALM.

### Traffic and transport records and high points

Prior to the events of 11 September, a new record was set with respect to traffic and transport. In passenger traffic, for example, July was the busiest month on record with 4.098.761 passengers (excluding transit). For the first time ever, the number of passengers in a single month totalled more than four million. This figure was achieved once again in August. The busiest day was 29 July with 145.672 passengers and the busiest hour was on 29 June from 14 to 15 hrs with 13.789 passengers.

The most cargo was transported in March with 111.857 tonnes. The busiest day of the year for cargo was 13 October with 4.640 tonnes handled. In terms of air traffic August was the busiest month with 38.451 commercial aircraft movements. However, the busiest day of the year fell on 18 September with 1.295 movements. As a result of United States air space being closed from 11 September, this day was used to deploy extra capacity in order to carry passengers who had otherwise been stranded. The busiest hour in terms of aircraft movements was 24 July from 14 to 15 hrs with 110 flights being recorded.

### Market position

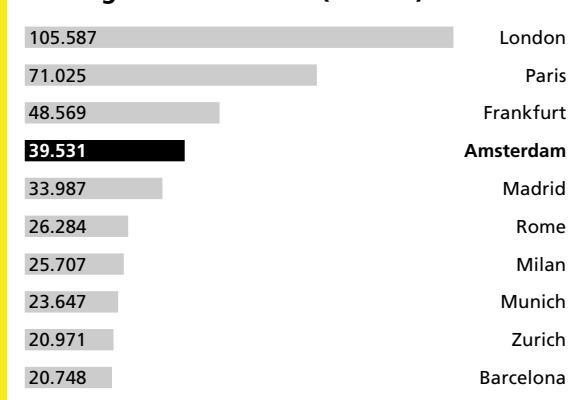

The passenger market at the 10 largest European airports suffered a decline of 1,7% in the last year in the wake of the events of 11 September. Worldwide, passenger traffic dropped more vigorously by around 4%. Madrid airport, which for many years had a shortfall in runway capacity, saw its traffic grow by 3% as a result of runway expansion in November 1999. Traffic at Munich also grew by over 2% thanks to the restructuring of Lufthansa's network, whereby Munich's role as a hub was strengthened. In contrast, passenger traffic at Brussels en Zurich subsided sharply by 9% and 7% respectively. At the end of October Sabena, Belgium's national carrier, went into moratorium eventually resulting in its liquidation at the

beginning of November. As a result, Brussels lost its position in the top ten and was replaced by Barcelona, which transported around 5% more passengers than in 2000. In Zurich, Swiss national carrier Swissair, likewise went into moratorium at the beginning of October. Some of the Swissair flights were taken over by Crossair, operating from Basle as well as Zurich. At the top 4 destinations - London, Paris, Frankfurt and Amsterdam - passenger traffic fell 2,4% more strongly than the average within the top 10. This was caused mainly by the fact that traffic at the major airports is relatively more dependent on intercontinental flights and transfer passengers. It was these sectors in particular that suffered most as a consequence of 11 September. With a minimal drop of 0,2%, Schiphol was able to maintain and consolidate its 4th placed position amongst the top 10 in Europe

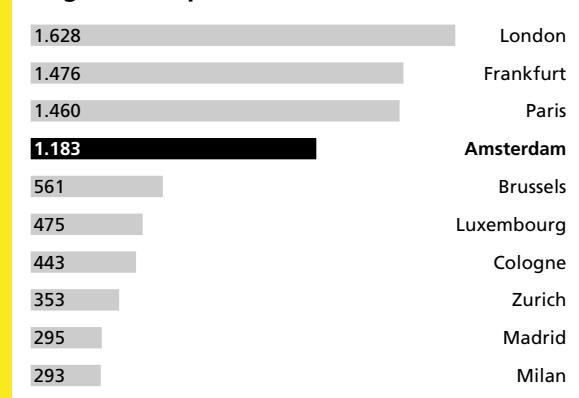

in 2001 the Far East appeared to present increasing opportunities as a market. In view of the large volumes of cargo traffic to the Far East from Schiphol, Amsterdam was in a better position to take advantage of this than other major airports at London, Paris, Frankfurt and Brussels. Moreover, cargo traffic dropped substantially at Brussels as a result of Sabena's difficulties. As a result Schiphol, with the transport of 1.183.208 tonnes, was able to sustain its fourth place in Europe and because of the slight downturn in traffic overall, saw its market share rise by 0,4% to 14,5%, amongst the top 10 in Europe.

There was a 4% rise in the number of aircraft movements at Schiphol in 2001, in all 416.462 commercial flights, 23.538 movements less than the permitted number. This rise was higher than the average growth figures at the 10 major European

#### Passenger movements (in mln)

#### Freight transport (x 1.000 tonnes)

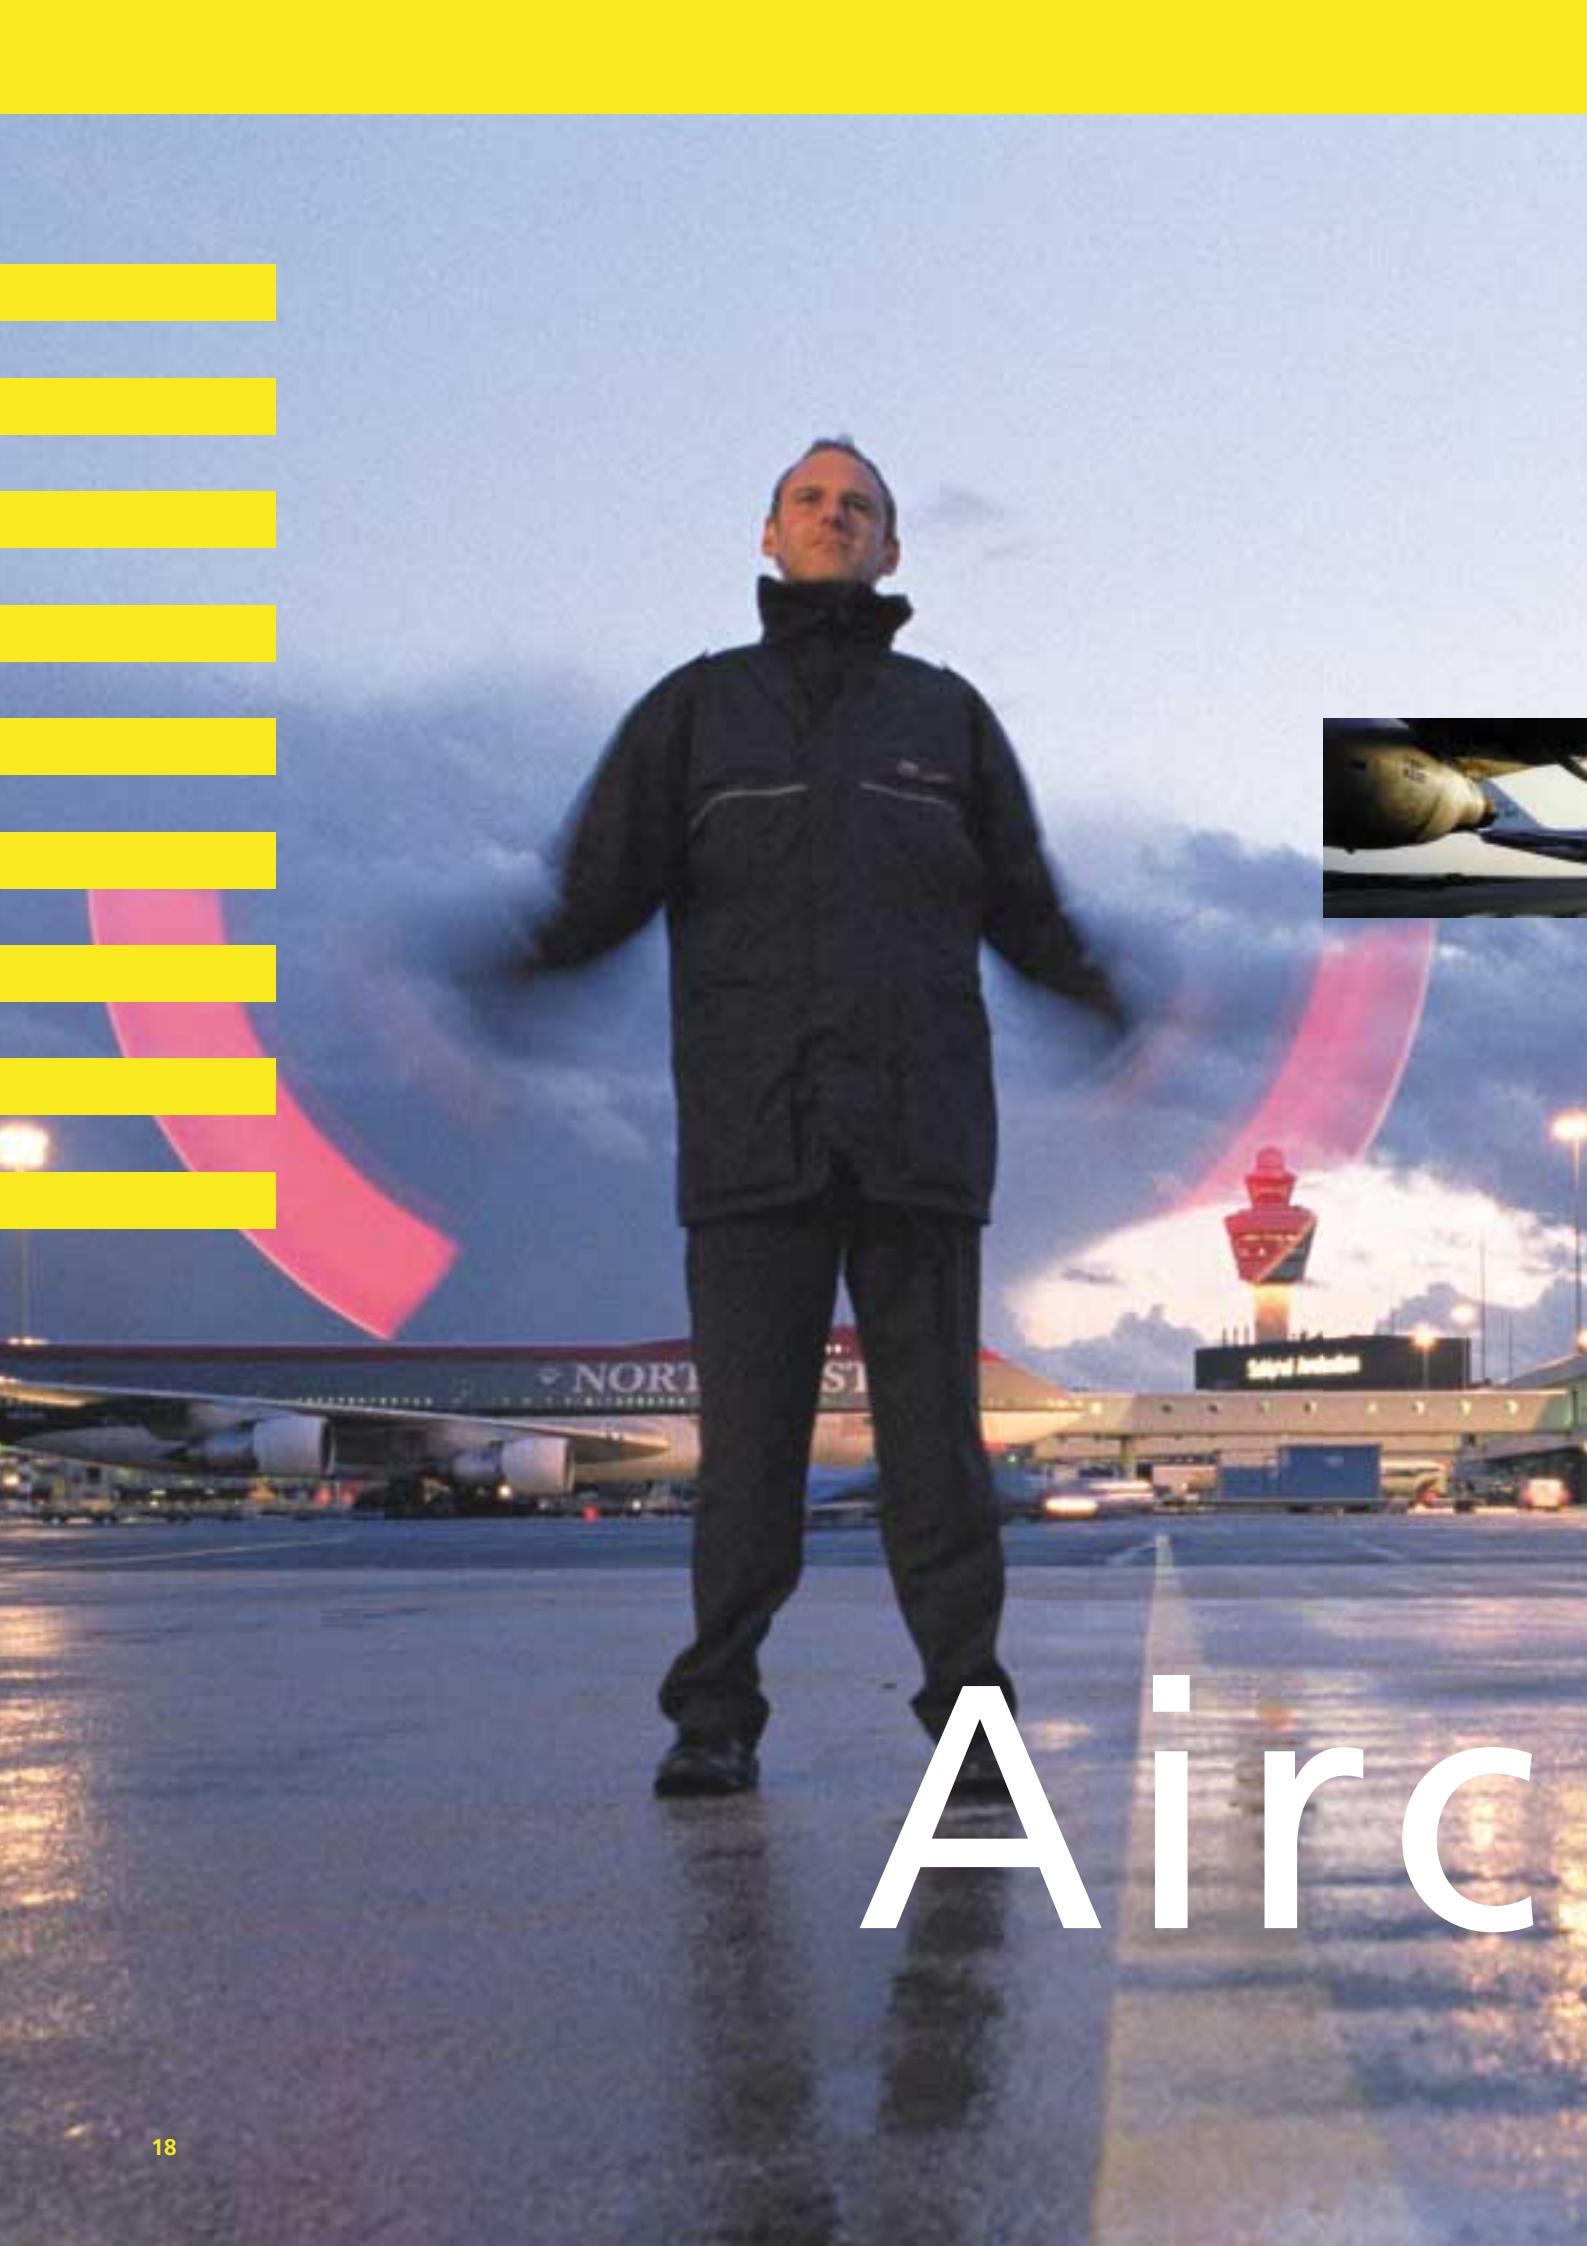

with a market share of 9,5%. However, Madrid, in 5th position, strengthened in position and closed the gap between 4th and 5th place.

Despite a decrease of 3,2%, the cargo market at Schiphol performed more strongly than other airports in Europe, so consolidating on its 4th placed position. The market share of cargo traffic rose every month. After the attacks in September, this increase intensified. Cargo traffic at Schiphol, which is to a lesser extent dependent on the North American market, suffered less from the diminishing trade on this route. On the other hand,

destinations, which meant that the market share for 2001 climbed to 9,7%. In 2001, Madrid saw a sharp increase in the number of its aircraft movements, with a percentage growth of almost 5%, caused by the expansion in runway capacity referred to earlier. Thanks to the growth of Lufthansa, Munich experienced an increase of almost 7%. Of the four largest (London, Paris, Frankfurt and Amsterdam), Schiphol was the only airport to achieve growth, so consolidating its position.

## Middle East

Persian Gulf Countries, Syria, Lebanon, Israel, Jordan

## Asia

Afghanistan and all countries to its East, including Russian Federation East of the Urals, all countries and islands in the Pacific.

# Definitions

## **Passenger transport**

All passengers on scheduled- and non-scheduled flights including free passengers, service passengers and infants.

Transfer passengers (those who change planes without leaving the customs area within 24 hours) are counted both incoming and outgoing; they are included in the figures.

Transit-direct passengers (those who leave the airport on the same flight number as the one by which they arrived, without leaving the customs area) are not counted incoming or outgoing, but stated separately.

Passengers on taxi-, photo- and sight seeing flights are excluded.

## **Aircraft movements**

An aircraft movement means a landing or take-off. Aircraft movement in scheduled traffic means a movement in commercial traffic according to an official timetable, including relief service of a scheduled service.

Aircraft movement in non-scheduled traffic means a non-scheduled movement in commercial traffic (charter, inclusive tour charter, etc.; taxi flights excluded).

## **Load factor**

The load factor means the number of passengers (including 2x transit-direct) expressed in a percentage of the number of available seats.

## **Punctuality**

Punctuality is the percentage of flights departing/arriving within the time period of 15 minutes after scheduled time on/off blocks, regarding scheduled passenger flights only.

## **Freight transport**

Both paying and non paying freight, including military mail, including express freight.

Goods leaving the airport on the same aircraft as the one by which they have arrived (transit-direct) are left out of account, as well as trucking freight.

## **Mail transport**

Exclusively mail handled by TNT Post Group  
N.V.excl. mail leaving the airport on the same aircraft as the one by which it has arrived (transit-direct).
