LITTLE BLACK BOOK

Ideas for research come from three sources:

- Simple observation of everyday events, by far the most important;
- From reading books and journals and asking “Why?”, when a statement is made;
- Contrived events – “I wonder what would happen if. . . ?”

- 1. Wie gehen wir mit der Realität um**
- 2. Was können Daten**
- 3. Was ist und wie entsteht Wissen**
- 4. Medical Decision Making**
- 5. PLUS**

Symposium: Klinische Entscheidungsunterstützung

Frankfurt am Main 06.12.2023 Fischmeister

Wie geht man mit der Realität um (I)

All science, and all philosophy, are enlightened common sense. *Karl Popper*

Science is a method for producing incremental useful approximation to reality, not a path to absolute truth

Gavin Schmidt (edge.org)

Symposium: Klinische Entscheidungsunterstützung
Frankfurt am Main 06.12.2023 **Fischmeister**

Wie geht man mit der Realität um (2)

Intellectual progress demands that we refuse to take things at face value, refuse to accept everything we have been told, refuse to assume that conventional wisdom must be right.

Science as Richard Feynman remarked, can be defined as “the belief in the ignorance of authority”.

Alfie Kohn

Daten (I)

Statistische Betrachtung

Datentyp, Verteilung,

Schließende, beschreibende Statistik

Entscheidungsbaumanalysen, SPC

Clinimetrie

Validität, Reliabilität, Responsiveness,

MCID *Minimal clinical important Difference*

PASS *Patient Acceptable Symptom State*

SBC *Substantial Clinical Benefit*

Symposium: Klinische Entscheidungsunterstützung

Frankfurt am Main 06.12.2023

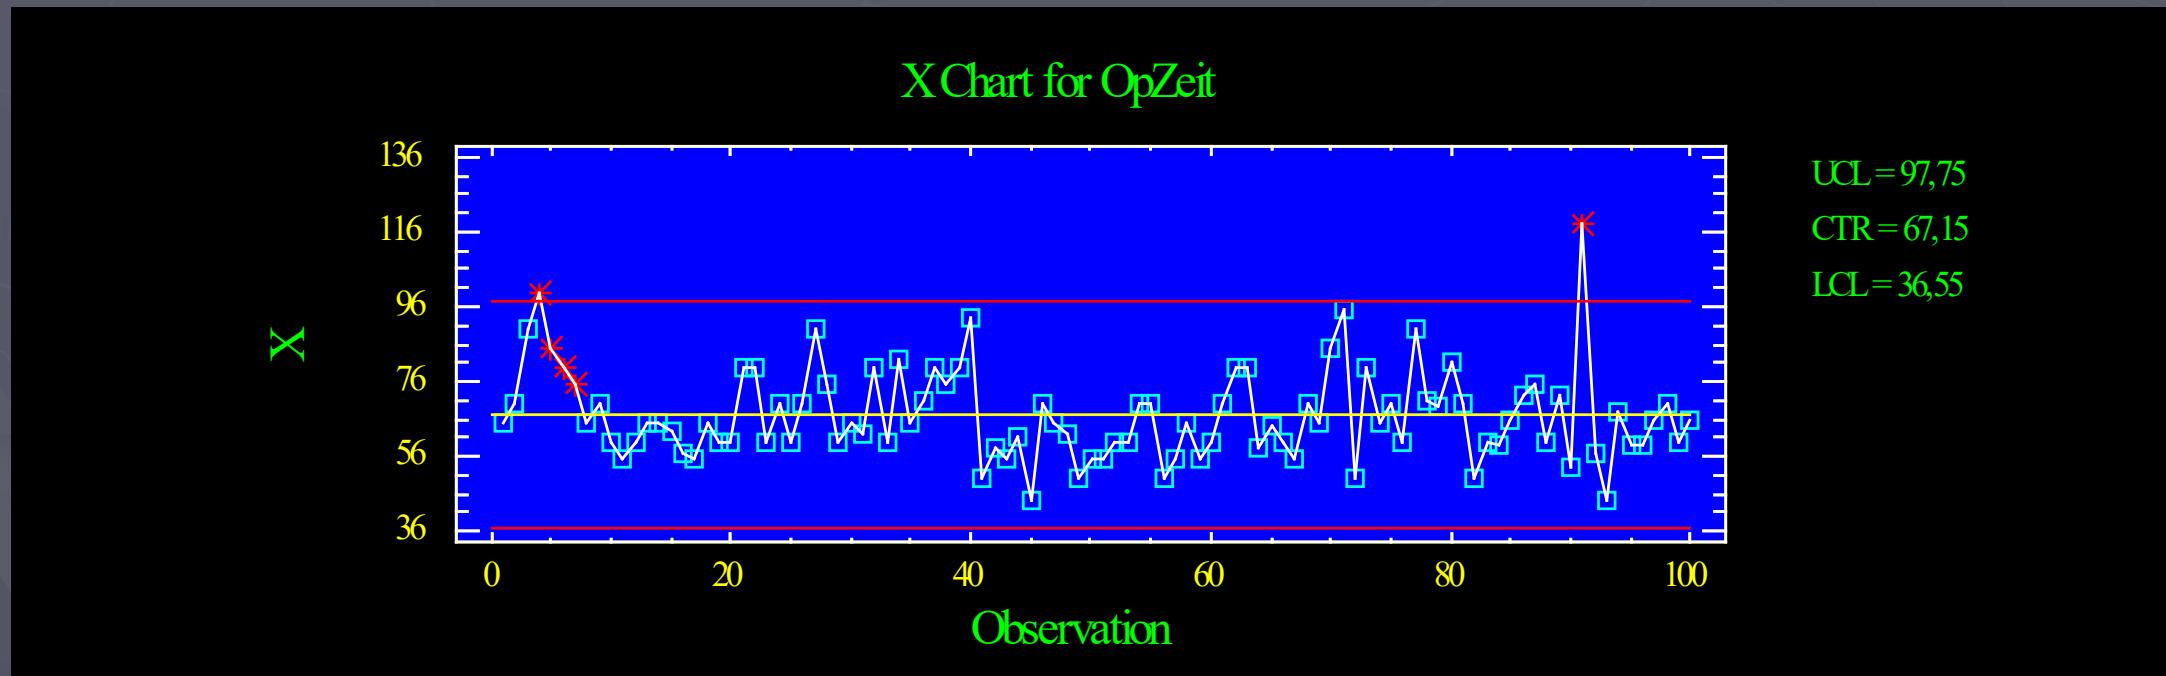

Fischmeister

When you can measure what you are speaking about and express it in numbers, you know something about it;
Lord Kelvin

Quality Improvement Study 1, 1: Ist der Behandlungsprozess in statistischer Kontrolle?

Variablen: Geschlecht, Alter, OP-Zeit

*Sequence of activities in the
intellectual pathway of cause - effect
or process research*

The Plans and Work

- 1 Choose a research hypothesis**
- 2 Choose a research structure**
- 3 Obtain the data**

The News

- 4 Organize the data into statistical structures**

Editorial appraisal of distinctions and credibility of the news

- 5 Decide about quantitative significance**
- 6 Decide about stochastic significance**
- 7 Check the scientific inference from research structure to desired architecture**

Editorial judgements re consequences

- 8 Form conclusions about confirmatory decisions, explicatory hypothesis and policy decisions**

Alvan R Feinstein 1985

UKH Linz 2008

Internal versus External Validity

Internal validity examines whether the study design, conduct, and analysis answer the research questions without bias.

External validity examines whether the study findings can be generalized to other contexts.

Figure 7-9 Analysis of the vascular insufficiency example, using values of 0.8 for amputation above the knee and of 0.9 for amputation below the knee.

Comparison of two Treatments

Good Results

Bad Results

Factors in Medical Decision - Making

- ▶ Judgement of the possible outcomes
- ▶ Judgement of the probabilities of these outcomes
- ▶ Utilities attached to these outcomes
- ▶ Attitude toward risk of the doctor and the patient
- ▶ Degree of paternalism of the doctor / desire for autonomy on the part of the patient
- ▶ Availability of facilities and their costs in the hospital
- ▶ Nature of the clinicians reward system

The Challenges of Medical Practice Variations
Tavs Folmer Andersen and Gavin Mooney
Macmillian Press 1990

Plus
j

**Fragen sie sich bei allem ,was sie tun:
Was kann ich das nächste Mal besser oder anders machen.**

Führen Sie ein Tagebuch (*little black book*) ihrer Ideen

**Realisieren Sie Ihre Ideen mit dem Instrumentarium der
klinischen Forschung (*Studie, Probe and Learn Process,
Patente,Qualitätsstudie, PDCA Zyklen, SPC*)**

Warum

**Weil es unglaublich beglückend und befriedigend ist, wenn es
gelingt auf diese Weise eine Spur in der Medizin zu
hinterlassen**
