

Ready to give your oral wellness routine the ultimate spa treatment?

The BrightByte™ Pro is an on-the-go LED whitening kit for achieving your brightest smile. Our exclusive mouth tray uses cutting-edge, low-temperature LED blue light technology, paired with our whitening gel, to remove stains safely and efficiently—or combine your treatment with a gentle purple LED light for a unique whitening experience. Recover after whitening by using the gentle massage feature, or try the soothing red LED light which can help to calm and rejuvenate your teeth and gums.

Use the whitening treatment for 16 minutes a day, and you'll quickly start to see a brighter smile. Perfect for regular whitening maintenance and customizing your oral wellness habits.

HOW TO USE

STEP 1

Rinse the BrightByte Pro mouth tray and your mouth before use. Dry your teeth to prevent saliva from diluting the gel adherence. Look at yourself in the mirror and compare your teeth to the shade guide (included), then record what stage you're on. Twist open the whitening pen until the gel flows onto the brush. Apply approx. 0.5 ml to 0.7 ml (about a pea-sized amount) evenly to all teeth.

STEP 2

Put the mouth tray into your mouth and gently bite down with the power button facing up.

STEP 3

Set a timer to whiten for up to 16 minutes total. When the time is up, remove the mouth tray and rinse the tray and your mouth with water. Compare your teeth with the shade guide again and record your results. Do not eat or drink anything (except for water) for 30 minutes after completing your whitening treatment.

STEP 4 (OPTIONAL)

If you're feeling any sensitivity on your teeth, disperse a small amount of desensitizing gel onto the brush top and apply a thin layer directly to any affected teeth. Pair with Mode 3 for a blue light and gentle massage or Mode 4 for a red light to help soothe teeth after treatment.

QUICKSTART GUIDE:		
Mode	Function	Recommended usage
1. Purple light	Combination whitening	16 min max per day with whitening gel
2. Blue light	Basic whitening	
3. Blue light + massage	Massage treatment	5 min max per day with or without desensitizing gel
4. Red light	Recovery treatment	

HOW TO TOGGLE BETWEEN MODES

- Press the power button once to turn on the device in Mode 1. Red and blue lights will illuminate to create a purple hue.
- Press the power button a second time to put the device in Mode 2. Blue light will illuminate.
- 3. Press the power button a third time to put the device in Mode 3. Blue light will illuminate and a gentle massage will begin.
- Press the power button a fourth time to put the device in Mode 4. Red light will illuminate.
- 5. Press the power button a fifth time to turn off the device.

CAUTIONS

Do not use the BrightByte Pro gentle massage feature in place of HyperByte® during aligner treatment.

- Do not apply the gel directly on your gums or on your inside lips, as this
 may create discomfort and irritation in the applied area. If you experience
 discomfort, rinse with water.
- · Not suitable for veneers, ceramic teeth, or other dental restorations.
- Not suitable for tetracycline stained teeth, decayed teeth, defective enamel, exposed dentin, damaged teeth, or teeth discoloration caused by lesion or medication.
- Not suitable for children or anyone that is pregnant (or nursing).
- Do not use gel pens after the expiration date.
- Replace cap after use. Avoid sunlight; store in a cool, dry place.
